Accuracy of the Charge HR Fitbit Gabrielle Ritchey,2017 A number of wearable fitness tracking monitors have been marketed in recent years. One device, Fitbit Inc. claims that it offers some of the most advanced technology that allows for accurate measurements of physical activity. However, studies are needed to verify these claims and to demonstrate the actual validity of these devices. Thus, the purpose of this study was to determine the accuracy of the Charge HR Fitbit in terms of step count, distance covered, heart rate, and floors climbed.

Adsensory Financialisation Pamela Odih,2016-09-23 Adsensory technology presupposes a neoliberal entrepreneurial self as an integral feature of its biopolitical financialisation of healthcare regimes. According to Michel Foucault, neoliberalism is indebted to the endeavour of its self-disciplined subjects, investing human capital in a self-regulated, entrepreneurial pursuit of responsible healthcare and well-being. Primarily informed by social network analytics and virtual ethnographic observations, this book identifies the biopolitical basis of adsensory technologies. It argues that a paradoxical feature of adsensory technologies dissimulating "that there is nothing" (Jean Baudrillard) is the proliferation of risk. This is because the dissimulation of nothing opens up the possibility that "everything can be a risk, in so far as the type of event it falls under can be treated according to the principles of insurance technology" (Francois Ewald). Adsensory wearable technologies are called upon as "a strategy of deterrence" (Jean Baudrillard) to indemnify capitalism's production of signs which dissimulate their simulation. In a context in which much that was certain now feigns its own existence, the insurance professed by adsensory technologies provides for an unrealisable guarantee against indefinable unknowable risks. Based also on case studies of European Court of Justice personal finance insurance rulings, this book engages critically with the neoliberal construct of the entrepreneurial lifestyle insurance subject. Social network analytics are utilised here to map bio-technology onto neoliberal regimes of financialised well-being and healthcare provision. In so doing, the book situates adsensory technologies within the marketising healthcare management programmes that are currently aligning the neoliberal reengineering of health and well-being citizenship with the biopolitical healthcare financialisation of populations. Paradoxically, in their endeavour to actor network virtual well-being health communities, adsensory technologies proliferate the individuating marketised conditions of neoliberal self-regulating entrepreneurialism. This gives rise to aleatory materialist dialectics of financialised surveillance far exceeding the regulatory time and space modalities of Foucauldian panoptics and Mathiesen synoptics. Adsensory technologies are integral to a seismic transformation in the cultural economies of time presently eliding digital advertising and insurantial technologies. Axiomatic with the synchronic times of the adsensory technologies valorised by lifestyle insurance, much riskier asynchronic embodied times, transgressively dissimilating the limits of financialisation, are beginning to emerge.

Fitness, Technology and Society Brad Millington,2017-09-18 The fitness industry is experiencing a new boom characterized by the proliferation of interactive and customizable technology, from exercise-themed video games to smartphone apps to wearable fitness trackers. This new technology presents the possibility of boundless self-tracking, generating highly personalized data for self-assessment and for sharing among friends. While this may be beneficial – for example, in encouraging physical activity – the new fitness boom also raises important questions about the very nature of our relationship with technology. This is the first book to examine these questions through a critical scholarly lens. Addressing key themes such as consumer experience, gamification, and surveillance, Fitness, Technology and Society argues that fitness technologies – by 'datafying' the body and daily experience – are turning fitness into a constant pursuit. The book explores the origins of contemporary fitness technologies, considers their implications for consumers, producers, and for society in general, and reflects on what they suggest about the future of fitness experience. Casting new light on theories of technology and the body, this is fascinating reading for all those interested in

physical cultural studies, technology, and the sociology of sport.

The Internet of Things Mercedes Bunz,Graham Meikle,2017-11-27 More objects and devices are connected to digital networks than ever before. Things - from your phone to your car, from the heating to the lights in your house - have gathered the ability to sense their environments and create information about what is happening. Things have become media, able to both generate and communicate information. This has become known as 'the internet of things'. In this accessible introduction, Graham Meikle and Mercedes Bunz observe its promises of convenience and the breaking of new frontiers in communication. They also raise urgent questions regarding ubiquitous surveillance and information security, as well as the transformation of intimate personal information into commercial data. Discussing the internet of things from a media and communication perspective, this book is an important resource for courses analysing the internet and society, and essential reading for anyone who wants to better understand the rapidly changing roles of our networked lives.

The Objective Monitoring of Physical Activity: Contributions of Accelerometry to Epidemiology, Exercise Science and Rehabilitation Roy J. Shephard,Catrine Tudor-Locke,2016-08-02 This book examines the new knowledge that has been gained from the objective monitoring of habitual physical activity by means of pedometers and accelerometers. It reviews current advances in the technology of activity monitoring and details advantages of objective monitors relative to physical activity questionnaires. It points to continuing gaps in knowledge, and explores the potential for further advances in the design of objective monitoring devices. Epidemiologists have studied relationships between questionnaire assessments of habitual physical activity and various medical conditions for

some seventy years. In general, they have observed positive associations between regular exercise and good health, but because of inherent limitations in the reliability and accuracy of physical activity questionnaires, optimal exercise recommendations for the prevention and treatment of disease have remained unclear. Inexpensive pedometers and accelerometers now offer the epidemiologist the potential to collect relatively precisely graded and objective information on the volume, intensity and patterns of effort that people are undertaking, to relate this data to past and future health experience, and to establish dose/response relationships between physical activity and the various components of health. Such information is important both in assessing the causal nature of the observed associations and in establishing evidence-based recommendations concerning the minimal levels of daily physical activity needed to maintain good health.
