Best Practices in Computer Network Defense: Incident Detection and Response M. Hathaway,IOS Press,2014-01-21 The cyber security of vital infrastructure and services has become a major concern for countries worldwide. Current Research in Protein Chemistry Villafranc,1990-04-28 Current Research in Protein Chemistry: Techniques, Structure, and Function reviews new techniques and methods for determining the structure and function

of proteins. Topics covered include protein folding and stability, chimeric proteins, amino acid and peptide analysis, mass spectrometric methods, and protein sequencing techniques. This book is divided into six sections comprised of 55 chapters. The discussion begins with a description of microwave irradiation that uses Teflon-Pyrex tubes for protein hydrolysis, followed by the application of high performance capillary electrophoresis to the analysis of amino acids. The sections that follow explore mass spectrometry, protein sequencing, and capillary electrophoresis as well as protein stability, chimeric proteins and enzyme modifications, and protein structure prediction. Chapters focus on the crystal structure of human interleukin-1☐, the acid-denatured states of proteins, solubility of recombinant proteins expressed in Escherichia coli, and catalysis by chimeric proteins. Black Code Ronald J. Deibert,2013-05-14 Cyberspace is all around us. We depend on it for everything we do. We have reengineered our business, governance, and social relations around a planetary network unlike any before it. But there are dangers looming, and malign forces are threatening to transform this extraordinary domain. In Black Code, Ronald J. Deibert, a leading expert on digital technology, security, and human rights, lifts the lid on cyberspace and shows what's at stake for Internet users and citizens. As cyberspace develops in unprecedented ways, powerful agents are scrambling for control. Predatory cyber criminal gangs such as Koobface have made social media their stalking ground. The discovery of Stuxnet, a computer worm reportedly developed by Israel and the United States and aimed at Iran's nuclear facilities, showed that state cyberwar is now a very real possibility. Governments and corporations are in collusion and are setting the rules of the road behind closed doors. This is not the way it was supposed to be. The Internet's original promise of a global commons of shared knowledge and communications is now under threat. Drawing on the first-hand experiences of one of the most important protagonists in the battle — the Citizen Lab and its global network of frontline researchers, who have spent more than a decade cracking cyber espionage rings and uncovering attacks on citizens and NGOs worldwide — Black Code takes readers on a fascinating journey into the battle for cyberspace. Thought-provoking, compelling, and sometimes frightening, it is a wakeup call to citizens who have come to take the Internet for granted. Cyberspace is ours, it is what we make of it, Deibert argues, and we need to act now before it slips through our grasp.
