Converging Clinical and Engineering Research on Neurorehabilitation José L Pons, Diego Torricelli, Marta Pajaro, 2013-02-19 Restoring human motor and cognitive function has been a fascinating research area during the last century. Interfacing the human nervous system with electro-mechanical rehabilitation machines is facing its crucial passage from research to clinical practice, enhancing the potentiality of therapists, clinicians and

researchers to rehabilitate, diagnose and generate knowledge. The 2012 International Conference on Neurorehabilitation (ICNR2012) brings together researchers and students from the fields of Clinical Rehabilitation, Applied Neurophysiology and Biomedical Engineering, covering a wide range of research topics: · Clinical Impact of Technology · Brain-Computer Interface in Rehabilitation · Neuromotor & Neurosensory modeling and processing · Biomechanics in Rehabilitation · Neural Prostheses in Rehabilitation · Neuro-Robotics in Rehabilitation · Neuromodulation This Proceedings book includes general contributions (2-page extended abstracts) from oral and poster sessions, as well as from special sessions. A section is also dedicated to pre-post conference workshops, including invited contributions from internationally recognized researchers. A selection of most relevant papers have been considered for publication in international journals (e.g. JNER, JACCES, ...)., therefore they will appear soon in their extended versions in Special Issues. The War of My Generation David Kieran,2015-08-04 Following the 9/11 attacks, approximately four million Americans have turned eighteen each year and more than fifty million children have been born. These members of the millennial and post-millennial generation have come of age in a moment marked by increased anxiety about terrorism, two protracted wars, and policies that have raised questions about the United States's role abroad and at home. Young people have not been shielded from the attacks or from the wars and policy debates that followed. Instead, they have been active participants—as potential military recruits and organizers for social justice amid anti-immigration policies, as students in schools learning about the attacks or readers of young adult literature about wars. *The War of My Generation* is the first essay collection to focus specifically on how the terrorist attacks and their aftermath have shaped these new generations of Americans. Drawing from a variety of disciplines, including anthropology, sociology, cultural studies, and literary studies, the essays cover a wide range of topics, from graphic war images in the classroom to computer games designed to promote military recruitment to emails from parents in the combat zone. The collection considers what cultural factors and products have shaped young people's experience of the 9/11 attacks, the wars that have followed, and their experiences as emerging citizen-subjects in that moment. Revealing how young people understand the War on Terror—and how adults understand the way young people think—*The War of My Generation* offers groundbreaking research on catastrophic events still fresh in our minds.

Knowledge Games Karen Schrier, 2016-06-15 Are games the knowledge-producers of the future? Imagine if new knowledge and insights came not just from research centers, think tanks, and universities but also from games, of all things. Video games have been viewed as causing social problems, but what if they actually helped solve them? This question drives Karen Schrier's *Knowledge Games*, which seeks to uncover the potentials and pitfalls of using games to make discoveries, solve real-world problems, and better understand our world. For example, so-called knowledge games—such as Foldit, a protein-folding puzzle game, SchoolLife, which crowdsources bullying interventions, and Reverse the Odds, in which mobile game players analyze breast cancer data—are already being used by researchers to gain scientific, psychological, and humanistic insights. Schrier argues that knowledge games are potentially powerful because of their ability to motivate a crowd of problem solvers within a dynamic system while also tapping into the innovative data processing and computational abilities of games. In the near future, Schrier asserts, knowledge games may be created to understand and predict voting behavior, climate concerns, historical perspectives, online harassment, susceptibility to depression, or optimal advertising strategies, among other things. In addition to investigating the intersection of games, problem solving, and crowdsourcing, Schrier examines what happens when knowledge emerges from games and game players rather than scientists, professionals, and researchers. This accessible book also critiques the limits and implications of games and considers how they may redefine what it means to produce knowledge, to play, to educate, and to be a citizen.

What You Must Know About Strokes Amytis Towfighi, MD, Laura Stevens, MSci, 2020-07-31 No one is ever prepared for a stroke. It just happens, and when it does, the results can be life altering. From difficulties with communication to weakness, numbness, and cognitive difficulties, a stroke can have a wide range of consequences. For most people affected by a stroke, a flood of questions come afterward: How did this happen? What do we do next? What are our options? How long will recovery take? Am I at risk for another stroke? To answer these questions and so many others, stroke specialist Dr. Amytis Towfighi and best-selling health writer and stroke survivor Laura Stevens have written *What You Must Know About Strokes*. Written in plain English, this useful guide offers all the information stroke survivors and their loved ones need to know in order to ask the right questions and make informed decisions. It also includes information on identifying the early signs of a stroke and what to do when they appear. Part 2 looks at the immediate care given to stroke survivors as they are brought into a hospital setting. Part 3 details the most common rehabilitation treatments given to stroke patients to help them regain their ability to carry out their daily activities, mobility, speech, and cognition. These include occupational, physical, and speech therapies. It also discusses a number of complementary and alternative

treatments that may be helpful. Part 4 offers important suggestions on lifestyle and nutrition to help patients avoid another stroke. Part 5 provides a look at life after a stroke and the issues stroke survivors may face. It offers practical and easy-to-follow advice on moving forward. The book also offers a section of resources, listing services and agencies that provide answers and assistance to stroke patients and their families. The many challenges of dealing with a stroke are great—for patients as well as their loved ones. The road back is not always easy. Understanding what is happening and what treatment options are available is crucial. The information contained in this book can greatly benefit anyone dealing with the aftermath of a stroke and make all the difference in the world.
