Short-Selling with the O'Neil Disciples Gil Morales,Chris Kacher,2015-04-13 Leave the old paradigm behind and start safeguarding your portfolio Short Selling with the O'Neil Disciples is a guide to optimizing investment performance by employing the unique strategies put forth by William O'Neil. The authors traded these strategies with real money, then refined them to reflect changing markets and conditions to arrive at a globally-relevant short-selling strategy that helps investors realize maximum profit. Readers will learn how short selling recognizes the life-cycle paradigm arising from an economic system that thrives on 'creative destruction,' and has been mischaracterized as an evil enterprise when it is simply a single component in smart investing and money management. This informative guide describes the crucial methods that preserve gains and offset declines in other stocks that make up a portfolio with more of an intermediate- to long-term investment horizon, and how to profit outright when markets begin to decline. Short-selling is the act of identifying a change of trend in a stock from up to down, and seeking to profit from that change by riding the stock to the downside by selling the stock while not actually owning it, with the idea of buying the stock back later at a lower price. This book describes the methods that make short-selling work in today's markets, with expert advice for optimal practice. Learn the six basic rules of short-selling Find opportunities on both the long and short sides of stocks Practice refined methods that make short-selling smarter Examine case studies that profitably embody these practices Investors able to climb out of the pessimistic, conspiratorial frame of mind that fixates on the negative will find that short selling can serve as a practical safeguard that will protect the rest of their portfolio. With clear guidance toward the techniques relevant in today's markets, Short Selling with the O'Neil Disciples is an essential read.

Advances in Modeling Agricultural Systems Petraq Papajorgji,Panos M. Pardalos,2009-02-28 Agriculture has experienced a dramatic change during the past decades. The change has been structural and technological. Structural changes can be seen in the size of current farms; not long ago, agricultural production was organized around small farms, whereas nowadays the agricultural landscape is dominated by large farms. Large farms have better means of applying new technologies, and therefore technological advances have been a driving force in changing the farming structure. New technologies continue to emerge, and their mastery and use in requires that farmers gather more information and make more complex technological choices. In particular, the advent of the Internet has opened vast opportunities for communication and business opportunities within the agricultural community. But at the same time, it has created another class of complex issues that need to be addressed sooner rather than later. Farmers and agricultural researchers are faced with an overwhelming amount of information they need to analyze and synthesize to successfully manage all the facets of agricultural production. This daunting challenge requires new and complex approaches to farm management. A new type of agricultural management system requires active cooperation among multidisciplinary and multi-institutional teams and refining of existing and creation of new analytical theories with potential use in agriculture. Therefore, new management agricultural systems must combine the newest achievements in many scientific domains such as agronomy, economics, mathematics, and computer science, to name a few.
