High-Tech Industries, Employment and Global

Competitiveness S.R. Hashim,N.S. Siddharthan,2020-11-29 The process of development in recent times has been characteristically marked by the expanding reach of multinational enterprises, flows of foreign direct investment, unprecedented growth of information and communication technologies (ICT) and knowledge-based industries, and infusion of ICT across the entire spectrum of industries and activities. High-tech knowledge-based industries like information technology, biotechnology, pharmaceuticals and so on have played an important role in the transition of Chinese and Indian economies—the two largest and fastest growing economies. This inter-disciplinary book offers an in-depth understanding of the behaviour of firms in these industries, analysing the strategies they adopt in a globally competitive environment, the role they have played in ushering in the growth revolution in China and India, and the contribution they have made to the nature and growth of employment. This study also dwells upon the emerging nature of scientific and technological developments like nanotechnology, novel materials, spintronics and quantum computers, with the conclusion that in the future, knowledge and technology are going to be the real sources of wealth for nations.

High Tech and High Heels in the Global Economy Carla Freeman,2000-03-15 High Tech and High Heels in the Global Economy is an ethnography of globalization positioned at the intersection between political economy and cultural studies. Carla Freeman's fieldwork in Barbados grounds the processes of transnational capitalism—production, consumption, and the crafting of modern identities—in the lives of Afro-Caribbean women working in a new high-tech industry called "informatics." It places gender at the center of transnational analysis, and local Caribbean culture and history at the center of global studies. Freeman examines the expansion of the global assembly line into

the realm of computer-based work, and focuses specifically on the incorporation of young Barbadian women into these high-tech informatics jobs. As such, Caribbean women are seen as integral not simply to the workings of globalization but as helping to shape its very form. Through the enactment of "professionalism" in both appearances and labor practices, and by insisting that motherhood and work go hand in hand, they re-define the companies' profile of "ideal" workers and create their own "pink-collar" identities. Through new modes of dress and imagemaking, the informatics workers seek to distinguish themselves from factory workers, and to achieve these new modes of consumption, they engage in a wide array of extra income earning activities. Freeman argues that for the new Barbadian pink-collar workers, the globalization of production cannot be viewed apart from the globalization of consumption. In doing so, she shows the connections between formal and informal economies, and challenges long-standing oppositions between first world consumers and third world producers, as well as white-collar and blue-collar labor. Written in a style that allows the voices of the pink-collar workers to demonstrate the simultaneous burdens and pleasures of their work, *High Tech and High Heels in the Global Economy* will appeal to scholars and students in a wide range of disciplines, including anthropology, cultural studies, sociology, women's studies, political economy, and Caribbean studies, as well as labor and postcolonial studies.

The Politics of High Tech Growth Sean O'Riain, 2004-04-26

This book argues that beneath the Irish trade and foreign investment boom lies a more interesting story of regional innovation promoted by an alliance between the state and local technical communities. This alliance was governed through a decentralized set of state institutions, drawing on 'global' and 'local' economic and political resources. This 'Developmental Network State' has had a significant impact on the growth of Ireland's high tech cluster and is central to the emergence of an

international network of 'global high tech regions' from Silicon Valley to Ireland, Taiwan, and Israel. The book provides a detailed study of the rise of the software industry in Ireland and of the state institutions and political conditions which promoted it. It shows how new 'network state' policies and institutions have been central to high tech regions elsewhere.

Global High-tech Marketing Jules E. Kadish,1993 Export marketing holds the promise of vastly increased sales and market share for companies of all sizes. This book gives you the tools you need to go from ground zero -- virtually no experience in international marketing -- to the point where you can confidently pull together an effective plan for marketing your products overseas.

Global Ambitions and Local Identities Galit Ailon,2007 Until recently, international mergers of companies have been seen as purely financial ventures without any concern for what they meant for the people involved. However, attitudes are gradually changing. This study of a successful Israeli high-tech company's merger with an American competitor offers an important contribution to a better understanding of the social and personal ramifications of mergers. Based upon in-depth fieldwork, the book explores the reality behind the statistics, balance sheets, and managerial prescriptions that are the focus of most studies of international mergers and acquisitions. Offering a richly detailed description of everyday work life, the author reveals the dramas of identity that unfold as a consequence of the company's attempts to redefine the boundaries of the organizational collective by adding to it people from another country. The book debunks many myths used to support arguments both for and against globalization and offers instead an in-depth depiction and a grounded assessment of its everyday realities.

The Silicon Dragon Terence Tsai, Borshiuang

Cheng, 2006-01-01 The Silicon Dragon is a systematic study of the growth of high-tech giants in the Greater China Region, depicting the success story of the microelectronics industry in Taiwan. Literature and studies on Taiwan's success are surprisingly limited, and this book aims to fill this gap, addressing questions such as: How has Taiwan achieved such an outstanding performance in the information industry? How did Taiwan obtain and maintain its competitive advantage? What was the secret of success? What role did the government and manufacturers play during the development process? What insights can newcomers gain from these achievements? The book examines the government policies that acted as catalysts to the growth of high-tech industries in Taiwan, along with the roles of high-tech incubators and government-administered science parks. The authors provide case studies of high profile companies including Acer, Philips Semiconductors and Macronix International, and interviews with key decision makers to highlight the corporate strategies adopted in response to government policies and global commercial demand. Finally, insightful narratives on the birth and growth of a government-fostered strategic industry are provided, as is a synopsis of the Asian contribution to the evolution of the global microelectronics development. This book will strongly appeal to academics, researchers and students with an interest in engineering, technology and business management. Business managers and government officials will also find much to interest them in this book.

High-Tech Europe Wayne Sandholtz, 2018-05-18

Governments have recognized for decades the dynamic role played by microelectronics, computers, and telecommunications in the modern economy. Although Europe's deficiencies in these crucial sectors had long been acknowledged, it was not until the 1980s that European nations began collaborating to develop and

promote high-tech industries. Their collaboration gives rise to many questions. Why, for example, did the joint efforts come at such a late date rather than in the 1960s or '70s? And how is it possible to work together in economically sensitive areas? These questions point to fundamental issues in the areas of international cooperation, international institutions, and technology policy. Before the institution of the collaborative programs ESPRIT (European Strategic Programme for Research and Development in Information Technology), RACE (R & D in Advanced Communications-technologies in Europe), and EUREKA (European Research Coordination Agency) in the 1980s, each European country sought its own technological renaissance through protection of national firms behind walls of technical standards, procurement preferences, and research subsidies. This thorough, carefully researched work examines the breakdown of these walls. It will appeal to political scientists, economists, and scholars of technology and Western Europe interested in the political contours of the high-tech landscape. This title is part of UC Press's Voices Revived program, which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice, reach, and impact. Drawing on a backlist dating to 1893, Voices Revived makes high-quality, peer-reviewed scholarship accessible once again using print-on-demand technology. This title was originally published in 1992.

High-Tech Tots Ilene R. Berson, Michael J. Berson, 2010-05-01
Young children are coming of age surrounded by information and communication technology (ICT). ICT is a prominent force in their lives, and working with ICT can stimulate students intellectually, incite their creativity, and challenge them to apply developmentally appropriate inquiry approaches that enhance their learning experiences. Digital technologies also allow children to expand their physical space and access many online social environments that transcend time and space. However, any focus on the efficiency and effectiveness of technology applications in

the early childhood years cannot overlook the potential consequences of technological development on children with regard to their social functioning, interpersonal interactions, and global understanding. In addition to evaluating technology as a tool of instruction, we must focus on educational implications and ethical issues associated with their use. This book is the fifth in the Research in Global Child Advocacy Series. The volume examines theoretical assumptions as well as the application of innovative strategies that optimize the interface between young children and ICT from a global perspective. Despite divergent perspectives, the chapter authors share a commitment to explore the immersion of ICT into the lives of young children and consider the educational value of these tools as well as the developmental appropriateness of technological affordances. This volume brings together scholars and policymakers whose rich discourse delves into questions such as: How do communication technologies benefit young children's social and cognitive development? What standards and technical specifications are needed to effectively safeguard young children engaged with ICT? How are young children introduced to ICT? What are the challenges and risks for young children online? What programs are effective in mediating risk? What are the educational applications for ICT in early childhood? Is social networking the new online playground" for young children? How can young children become competent users of digital technology and media? How can early childhood educators and families encourage positive usage and discourage negative social consequences associated with today's technology? How can ICT enhance teaching and learning for young children? What ICT activities are developmentally appropriate for young children? In the book there are three primary areas of emphasis: (a) ICT as a teaching and learning tool across cultures and countries to promote the social and cognitive development of young children; (b) research on developmentally appropriate education on cybersafety and cybercitizenship; and (c) studies on the influence of digital

technologies on young children, including exposure to inappropriate content and participation in online social networks. This resource offers readers a glimpse into the experience of children and the expertise of researchers and professionals who diligently work toward crafting a framework for action that reflects intercultural and cross-national initiatives. Given the role that electronic media plays in the lives of children as both an educational and entertainment tool, understanding the physical and social contexts, as well as the developmental issues, is critical to programs aiming to optimize the full potential of digital tools that support and enhance the experiences of young children.

The Development of High Technology Industries Michael J Breheny,Ronald Mcquaid,2018-03-22 This book, originally published in 1988, reviews the development of high technology industries at global and selected national and local levels, providing a unique insight into reasons for and consequences of such modern industrial development. It appraises government policies for assisting the development of this sector and focuses on the fact that high tech industry tends to be concentrated in particular regions of countries which attain the status of 'successful populations'. High technology industry seems to offer little benefit to declining manufacturing areas and the book offers explanations for these regional concentrations and assesses the likely consequences.

The Rise, Decline and Renewal of Silicon Valley's High Technology Industry Dan Khanna,2018-03-26 Originally published in 1997 this book examines the unique nature and characteristics of Silicon Valley and looks at the factors that led to the economic and competitiveness problems of the 1980s. The research

concluded that the information revolution caused a complex set of events that had global ramifications. Silicon Valley was no longer operating as a driver of this revolution, but it was facing the onslaught of the global competitiveness it had unleashed.

The Reality of Our Global Future Peter Scott-

Morgan, 2012-03-27 Where are we heading? Stripped of all the hype and fantasy - where really is the world economy set to take us by 2040? Those of us alive today are on an extraordinary course: For several decades our future has largely been determined by a handful of relatively-obscure trends that together generate the awesome propulsion of a High-Tech engine that is launching the international community on a voyage into completely unfamiliar territory. But where will we all end up? Based on unparalleled insights into what organizations across the globe are actually doing, for the first time the world's foremost expert on the hidden inner-workings of society explains in simple and accessible language exactly where the most deeply-established trends are taking us. How, despite claims that its accelerating progress is not sustainable for much longer, Digitization is on an inexorable course to a mind-blowing society of virtual-assistants, robot cars, cyborgs and everything on-the-record. And how Networking will combine with Digitization to lead by 2040 to computers capable of human-like interaction and an internet a billion times more powerful than today's. Dr. Scott-Morgan reveals how the Miniaturization trend offers nanotech breakthroughs ranging from cancer treatments to quantum computing - but not, as has often been claimed, Star-Trek Replicators or the threat of 'grey goo'. And he shows how exponential Simulation will support fundamental and sweeping advances that lead to almost limitless electricity and maybe almost limitless life-extension. Our world is set for a Global Renaissance. However, the backdraft of the High-Tech launch engine is also stirring up a turbulence of unintended consequences that threaten to disrupt our trajectory. Rather than Global

Renaissance, we would then enter Global Chaos. Yet these are not ordinary times. In the startling conclusion to his book, Dr. Scott-Morgan reveals how in only the last couple of years a brand new exponential trend has begun to emerge out of the turbulence. In terms of influencing our destination - whether we end up in a Global Renaissance or in Global Chaos - it is that trend that will be the most important one of all. NOTE: This is the companion volume to 'The Reality of Global Crises' by the same author.

In the Camps Darren Byler, 2022-02-03 A revelatory account of what is really happening to China's Uyghurs 'Intimate, sombre, and damning... compelling.' Financial Times 'Chilling... Horrifying.' Spectator 'Invaluable.' Telegraph In China's vast northwestern region, more than a million and a half Muslims have vanished into internment camps and associated factories. Based on hours of interviews with camp survivors and workers, thousands of government documents, and over a decade of research, Darren Byler, one of the leading experts on Uyghur society uncovers their plight. Revealing a sprawling network of surveillance technology supplied by firms in both China and the West, Byler shows how the country has created an unprecedented system of Orwellian control. A definitive account of one of the world's gravest human rights violations, *In the Camps* is also a potent warning against the misuse of technology and big data.

Linking Trade and Technology Policies National Academy of Engineering, Steering Committee on Linking Trade and Technology Policies, 1992-02-01 How is technology changing the nature of global competition? Can governments devise policies that help to create comparative advantages for national firms? An international group of experts in trade and technology policy addresses these questions in a book that contributes to a better understanding of how U.S. approaches to such policies differ from those of other industrialized countries. It explores current trends in trade and technology policies and the consequences for U.S. economic competitiveness. Topics discussed include the changing positions

of the United States, Japan, and Germany in technological and trade competition, the management of trade conflict in high-technology industries, and new approaches to linking trade and technology policy. The book highlights the critical interplay of domestic and international policies and underscores the need for policymakers to achieve greater complementarity between their domestic and international economic policies.
