Cereal Diseases: Nanobiotechnological Approaches for Diagnosis and Management

Kamel A. Abd-El Salam, Heba I. Mohamed, 2022-10-25 New ways to improve cereal crops against fungal, bacterial, and viral diseases are covered in this book that was put together by a group of experts. These include genetics, genome editing systems, and nano-biotechnological tools. Cereal crops are mainly the world's leading food crops and feed a large share of the world population. However, external factors, such as pathogens, have often threatened their productivity. Like wheat, rice, maize, oats, barley, millet and storage, etiology, epidemiology, and diseases in cereal crop management. In addition, the importance of crop genetics and genomics in combating pathogens has been discussed. This book offers up-to-date information on new methods, such as the potential of the genome editing system for crop improvement, in particular the CRISPR-Cas system. The current volume also talks about identification, plant breeding, genome editing, and nanotechnology tools that can be used to fight disease in cereal crops. This book is good for students, teachers, and researchers who study biotic stress in cereals, as well as scientists who study nanotechnology, disease resistance, pathogen biology, genome editing, agriculture sciences, and future biotechnology.

Microlocal Analysis and Complex Fourier Analysis Takahiro Kawai, Keiko Fujita, 2002-12-12

This book is a collection of original papers on microlocal analysis, Fourier analysis in the complex domain, generalized functions and related topics. Most of the papers originate from the talks given at the conference "Prospects of Generalized Functions" (in November, 2001 at RIMS, Kyoto). Reflecting the fact that the papers, except M Morimoto's one, are dedicated to Mitsuo Morimoto, the subjects considered in this book are interdisciplinary, just as Morimoto's works are. The historical backgrounds of the subjects are also discussed in depth in some contributions. Thus, this book should be valuable not only to the specialists in the fields, but also to those who are interested in the history of modern mathematics such as distributions and hyperfunctions. Contents: Vanishing of Stokes Curves (T Aoki et al.) Parabolic Equations with Singularity on the Boundary (C P Arceo et al.) Residues: Analysis or Algebra? (C A Berenstein) Heat Equation via Generalized Functions (S-Y Chung) Bergman Transformation for Analytic Functionals on Some Balls (K Fujita) On Infra-Red Singularities Associated with QC Photons (T Kawai & H P Stapp) Hyperfunctions and Kernel Method (D Kim) The Effect of New Stokes Curves in the Exact Steepest Descent Method (T Koike & Y Takei) Boehmians on the Sphere and Zonal Spherical Functions (M Morimoto) On a Generalization of the Laurent Expansion (Y Saburi) Domains of Convergence of Laplace Series (J Siciak) The Reproducing Kernels of the Space of Harmonic Polynomials in the Case of Real Rank 1 (R Wada & Y Agaoka) and other papers Readership: Graduate students in analysis or differential geometry and specialists in generalized functions, differential equations, analytic functions and complex WKB analysis.
