Economic Empowerment of Women for Sustainable Development Dr. V. Malarvizhi,Dr. S. Gandhimathi,Dr. R. Annapoorni,2024-03-25 In the global pursuit of equitable progress, the empowerment of women emerges as not merely an ethical imperative but a pragmatic necessity. The imperative of women's economic empowerment finds resonance throughout history, woven into the fabric of social movements, policy reforms, and economic progress. From the suffragette movements of the late 19th and early 20th centuries to the landmark conventions on women's rights and development in the latter half of the 20th century, the trajectory of gender equality has been marked by both triumphs and trials. The 1995 Fourth World Conference on Women in Beijing stands as a watershed moment, galvanizing global commitments to women's empowerment and setting forth an ambitious agenda for action. Subsequent milestones, including the adoption of the Sustainable Development Goals (SDGs) in 2015, further underscore the intertwined nature of gender equality and sustainable development. Over the years though the researchers, academicians and government have tried to find ways and means for economic empowerment of women many aspects of women economic empowerment-entrepreneurship and innovation, work place equality, global partnership etc are yet to be completely resolved. Little attention has been paid to the above aspects by the researchers, policy makers and development planners. The present volume titled "Economic Empowerment of Women for Sustainable Development containing 32 papers covers different aspects and issues related to economic empowerment of women and sustainable development. It is an initiative for shedding light on the pivotal role women play in fostering sustainable economic development. The main themes with the volume covers are: financial inclusion, education skill development, technology and digital inclusion, leadership, decision making, policy and advocacy. The volume will provide women's input and health for the academicians, researchers, policy makers and government officials.

Investing in a Sustainable World Matthew J. KIERNAN,2008-11-12 For business and investors, there's no doubt about it: The smart money is going green…and the growing movement toward ecologically forward-thinking companies is quickly becoming bigger and bigger. What may be surprising to some is that socially responsible organizations aren't just doing the right thing for the environment, they are also paying off financially, making their investors money and increasing the bottom line. Investing in a Sustainable World offers clear proof, through facts, figures, and hard documentation, that "going green" leads directly to better stock market performance…and that investors and companies who ignore it will, in fact, lose money. The book reveals the most powerful global megatrends—from the ongoing focus on emerging markets to natural resource depletion—which are transforming the very basis on which companies will compete, and offers an approach to sustainability-enhanced investing beneficial to both investors and companies. Revolutionary and backed by undeniable statistics, this book shows the clear link between sustainability initiatives and clear-cut profitability.

Sustainable Development and Planning X G. Passerini,N. Marchettini,2018-12-17 This volume contains research from the 10th International Conference on Sustainable Development and Planning. The papers included in this volume form a collection of research from academics, policy makers, practitioners and other stakeholders from across the globe who discuss the latest advances in the field. Problems related to development and planning, which affect rural and urban areas, are present in all regions of the world. Accelerated urbanisation has resulted in deterioration of the environment and loss of quality of life. Urban development can also aggravate problems faced by rural areas such as forests, mountain regions and coastal areas, amongst many others. Taking into consideration the interaction between different regions and developing new methodologies for monitoring, planning and implementation of novel strategies can offer solutions for mitigating environmental pollution and non-sustainable use of available resources. Energy saving and eco-friendly building approaches have become an important part of modern development, which places special emphasis on resource optimisation. Planning has a key role to play in ensuring that these solutions as well as new materials and processes are incorporated in the most efficient manner. The application of new academic findings to planning and development strategies, assessment tools and decision making processes are all covered in this book.
