*Concurrent, Real-Time and Distributed Programming in Java* Badr Benmammar,2017-12-27 This book provides an introduction to concurrent, real-time, distributed programming with Java object-oriented language support as an algorithm description tool. It describes in particular the mechanisms of synchronization (cooperative and competitive) and sharing of data (internal class, static variables) between threads in Java. He then discusses the use of Java for real-time applications. Consequently, a presentation of the RTSJ (Real Time Specification for Java) specification dedicated to the development of real-time applications in Java is also introduced in this book. Finally, a presentation of programming distributed in Java is presented in this book. We are particularly interested in communication using the TCP Sockets and high-level communication using Java Remote Method Invocation (RMI). The book also contains an annex which contains a practical set of application exercises in relation to the theme of the book. Knowledge of the Java language is a prerequisite for understanding the book.

Getting started with programming Rémy Lentzer,2021-07-09 This book is intended for anyone who wants to study the principles of writing code. The important thing is to think well before programming. After a brief history of the development of calculators and computers, you will learn how to design algorithms using everyday examples, such as a recipe of a cheese soufflé, a bubble sort, and a sequential and dichotomous method to sort out numbers in a list. You will discover how to program with Excel VBA and JavaScript adapted to Google Sheets. The objective of this manual is to help you understand how to automate repetitive tasks, while discovering the world of variables, loops, conditions, functions and procedures. Finally, because Internet pages are part of our daily lives, HTML and CSS will also be introduced. ABOUT THE AUTHOR Rémy Lentzner has been a computer trainer since 1985. Specialized in the mastery of office automation tools, he assists companies in the professional training of their employees. Self-taught, he has some fifteen computer books to his credit.

**Energy Transition in East Asia** Kuei-Tien Chou, 2017-12-01 The Fukushima disaster of 2011 shook the globe, arousing warm debate and new research within the academic fields of countries in both the West and the East on issues related to nuclear security, public trust, government governance, risk governance and risk perception along with technological and social aspects. The Fukushima incident not only revealed the importance of risk governance in the East Asian region, but also became an important turning point in the restructuring of energy in several East Asian nations. However, the regulatory culture in East Asian countries is by nature different to that of their western counterparts; the history and culture of East Asia has formed East Asian countries' unique regulatory characteristics. This book aims to establish a risk governance structure for the East Asian region, providing a completely new perspective for both practical implementation and the academic field. It focusses on the problems of risk governance in East Asia. Through a discussion of the risk related issues raised by contemporary globalization, this book outlines the unique form of East Asia's risk governance architecture. It brings together the work of top academics from Japan, South Korea and Taiwan to provide a common picture of how these three countries' governments are dealing with the energy transition brought on by the climate change crisis. The various aspects of East Asia's unique regulatory culture and governance models are placed into context, while East Asia's risk governance theoretical framework is outlined.
