Molecular Approaches to Gene Expression and Protein Structure M

Siddiqui,2012-12-02 Molecular Approaches to Gene Expression and Protein Structure documents the proceedings of the international symposium Gene and Protein Structure held in conjunction with the 22nd annual meeting of the Chilean Society of Biology at the campus of the Universidad Austral de Chile in Valdivia, Chile, December 1979. Organized by the Chilean Society of Biology, the symposium was designed not only to explore the concepts involved in the evolution of genes and protein structure but to bring together scientists from the United States and their counterparts from the Chilean academic institutions. The subject matter presented in this book reflects the research interests and experiences of the participating authors. The emphasis, in general, is on molecular and regulatory processes and cellular control mechanisms. The chapters include reviews on selected areas of interest written in a manner intelligible to newcomers to biological research, and present an in-depth analysis of the work with a balanced presentation of facts, concepts, and projections.

India's War Srinath Raghavan,2016-05-10 Between 1939 and 1945 India underwent extraordinary and irreversible change. Hundreds of thousands of Indians suddenly found themselves in uniform, fighting in the Middle East, North and East Africa, Europe and-something simply never imagined-against a Japanese army poised to invade eastern India. With the threat of the Axis powers looming, the entire country was pulled into the vortex of wartime mobilization. By the war's end, the Indian Army had become the largest volunteer force in the conflict, consisting of 2.5 million men, while many millions more had offered their industrial, agricultural, and military labor. It was clear that India would never be same-the only question was: would the war effort push the country toward or away from independence? In India's War, historian Srinath Raghavan paints a compelling picture of battles abroad and of life on the home front, arguing that the war is crucial to explaining how and why colonial rule ended in South Asia. World War II forever altered the country's social landscape, overturning many Indians' settled assumptions and opening

up new opportunities for the nation's most disadvantaged people. When the dust of war settled, India had emerged as a major Asian power with her feet set firmly on the path toward Independence. From Gandhi's early urging in support of Britain's war efforts, to the crucial Burma Campaign, where Indian forces broke the siege of Imphal and stemmed the western advance of Imperial Japan, Raghavan brings this underexplored theater of WWII to vivid life. The first major account of India during World War II, *India's War* chronicles how the war forever transformed India, its economy, its politics, and its people, laying the groundwork for the emergence of modern South Asia and the rise of India as a major power.

Lung Inflammation in Health and Disease, Volume II Yong-Xiao Wang, 2021-05-21

Lung diseases are leading causes of death and disability globally, with about 65 million people suffering from COPD, and 334 million from asthma. Each year, tens of millions of people develop and can die from lung infections such as pneumonia and TB. Systemic inflammation may induce and exacerbate local inflammatory diseases in the lungs, and local inflammation can in turn cause systemic inflammation. There is increasing evidence of the coexistence of systemic and local inflammation in patients suffering from asthma, COPD, and other lung diseases, and the co-morbidity of two or more local inflammatory diseases often occurs. For example, rheumatoid arthritis frequently occurs together with, and promotes the development of, pulmonary hypertension. This co-morbidity significantly impacts quality of life, and can result in death for some patients. Current treatment options for lung disease are neither always effective, nor condition-specific; there is a desperate need for novel therapeutics in the field. Additionally, the molecular and physiological significance of most major lung diseases is not well understood, which further impedes development of new treatments, especially in the case of coexistent lung diseases with other inflammatory diseases. Great progress has been made in recent years in many areas of the field, particularly in understanding the molecular geneses, regulatory mechanisms, signalling pathways, and cellular processes within lung disease, as well as basic and clinical technology, drug discovery, diagnoses, treatment options, and predictive prognoses. This is the first text to aggregate these developments. In two comprehensive volumes, experts from all over the world present state-of-the-art advances in the study of lung inflammation in health and disease. Contributing authors cover well-known as well as emerging topics in basic, translational, and clinical research, with the aim of providing researchers, clinicians, professionals, and students with new perspectives and concepts. The editors hope these books will also help to direct future research in lung disease and other inflammatory diseases, and result in the development of novel therapeutics.

Biohybrid Systems Ranu Jung, 2011-11-30 The discipline of neurodesign is a highly interdisciplinary one, while at the same time in the process of maturing towards real-life applications. The breakthrough about to be achieved is to close the loop in communication between neural systems and electronic and mechatronic systems and actually let the nervous system adapt to the feedback from the man-made systems. To master this loop, scientists need a sound understanding of neurology, from the cellular to the systems scale, of man-made systems and how to connect the two. These scientists comprise medical scientists, neurologists and physiologists, engineers, as well as biophysicists. And they need the topics in a coherently written work with chapters building upon another.

Musicophilia in Mumbai Tejaswini Niranjana, 2020-02-28 In *Musicophilia in Mumbai* Tejaswini Niranjana traces the place of Hindustani classical music in Mumbai throughout the long twentieth century as the city moved from being a seat of British colonial power to

a vibrant postcolonial metropolis. Drawing on historical archives, newspapers, oral histories, and interviews with musicians, critics, students, and instrument makers as well as her own personal experiences as a student of Hindustani classical music, Niranjana shows how the widespread love of music throughout the city created a culture of collective listening that brought together people of diverse social and linguistic backgrounds. This culture produced modern subjects Niranjana calls musicophiliacs, whose subjectivity was grounded in a social rather than an individualistic context. By attending concerts, learning instruments, and performing at home and in various urban environments, musicophiliacs embodied forms of modernity that were distinct from those found in the West. In tracing the relationship between musical practices and the formation of the social subject, Niranjana opens up new ways to think about urbanity, subjectivity, culture, and multiple modernities.
