Magnesium Deficiency in the Pathogenesis of Disease

Mildred S. Seelig,2012-12-06 There is a large and rapidly growing body of literature on the importance of magnesium in biochemical and physiological processes. There is also much evidence that magnesium deficiency, alone and in combination with agents that interfere with its utilization, is associated with functional and structural abnormalities of membranes, cells, organs, and systems. The manifestations of the changes caused by magnesium deficiency depend upon its extent and duration and on variable factors. Among the conditions that increase the risk of magnesium deficiency are (1) metabolic factors that affect

the absorption, distribution, and excretion of this mineral; (2) disease and therapy; (3) physiologic states that increase requirements for nutrients; and (4) nutritional imbalances. Excesses of nutrients that interfere with the absorption or increase the excretion of magnesium—such as fat, phosphate, sugar, and vitamin D—can contribute to long-lasting relative magnesium deficiency. All have been implicated in several of the diseases considered in this book. Whether their influence on the need for magnesium is a common denominator remains to be investigated further.

Phytochemicals in Vegetables and their Therapeutic Properties C.K. Narayana, 2021-11-29 This book contains information on plant-based nutrients and phytochemicals in vegetable crops that are commonly consumed. The information generated by researchers using modern methods of biochemical

analysis and results, mostly validated using cell line cultures or animal models, and to a limited extent on human volunteers have been presented. The vegetable crops have been grouped based on the family they belong to, because most often members of the same family have similar biomolecules as active ingredients and have similar effects on health. The book will help students/researchers/scientists and common man alike to look at the vegetables as protective foods, not just because it is said so, but with a scientific explanation.
