**Contributions Celebrating Kumar Krishna** Michael S. Engel,2011-11-21 The present issue of ZooKeys comprises a series of papers honoring Prof. Kumar Krishna, the leading authority on the systematics and biology of termites (Isoptera). After becoming exposed to termite systematics under the tutelage of Mittan L. Roonwal in India, Kumar received his doctoral training from the legendary termite systematist and evolutionary biologist Alfred E. Emerson at the University of Chicago. Subsequently, Kumar moved to the City University of New York and the American Museum of Natural History from where, even today, he has produced some of the most important contributions to the study of termites, most notably his two-volume set, *Biology of Termites* (1969?1970, Academic Press), and the forthcoming monumental *Treatise on the Isoptera of the World* (AMNH). Herein colleagues and friends recognize his lifetime of accomplishments in biological systematics by presenting original papers on insect lineages as diverse as termites and grasshoppers, and flies and bees, among others. A brief biographical account and list of his publications to date are provided.

*Phylogenetic treatment and taxonomic revision of the trapdoor spider genus Aptostichus Simon (Araneae, Mygalomorphae, Euctenizidae)* Jason E. Bond,2012-12-19 The Californian Floristic Province, located on the Pacific Coast of North America, is a region recognized as a ?biodiversity hotspot?.? The area?s rich floristic diversity is also reflected in its remarkable diversity of mygalomorph spiders ? the group that includes trapdoor spiders, tarantulas, funnel spiders, and their other close relatives.? This monograph documents the species diversity currently attributed to the euctenizid genus *Aptostichus* Simon distributed primarily throughout California, but also found in the habitats of Arizona and Nevada.? Based on the examination of approximately 2000 specimens from museum and field collections, 40 species are assessed, 33 of which are new to science ? *A. dantrippi*, *A. cabrillo*, *A. pennjillettei*, *A. asmodaeus*, *A. nateevansi*, *A. chiricahua*, *A. icenoglei*, *A. isabella*, *A. muiri*, *A. barackobamai*, *A. sinnombre*, *A. hedinatorum*, *A. aguacaliente*, *A. chemehuevi*, *A. sarlacc*, *A. derhamgiulianii*, *A. anzaborrego*, *A. serrano*, *A. mikeradtkei*, *A. edwardabbeyi*, *A. killerdana*, *A. cahuilla*, *A. satleri*, *A. elisabethae*, *A. fornax*, *A. lucerne*, *A. fisheri*, *A. bonoi*, *A. cajalco*, *A. sierra*, *A. huntington*, *A. dorothealangeae*, and *A. chavezi*.

**E-Infrastructures for Data Publishing in Biodiversity Science** Vincent Smith,Ljubomir Penev,2011-11-28 This collection of articles, developed in association with the EU funded ViBRANT project, illustrates how advances to research infrastructures are reciprocally changing the practice of taxonomy. A detailed review of data issues in the life sciences (Thessen and Patterson 2011) sets the tone for subsequent articles in this special issue, whose contributions broadly fall into three categories. The? initial articles consider some of the major infrastructure platforms that support the production and management of biodiversity data. These include the EDIT Platform for Cybertaxonomy, Wiki-based approaches including BioWikiFarm and the Scratchpads Virtual Research Environment. Later articles provide deeper coverage of specialist areas of interest to taxonomic and biodiversity researchers. The topics covered include the mark-up (Penev et al. 2011) and management (King et al. 2011) of taxonomic literature, geospatial assessment of species distributions (Bachman et al. 2011) and licensing issues specific to life science data (Hagedorn et al. 2011). Finally, the special issue closes with a series of research and review papers that provide detailed use cases illustrating how these research infrastructures are being put into practice. Highlights from this section include citizen science approaches to collecting species information by the COMBER Marine observation network (Arvanitidis et al. 2011) and the Australian Bush Blitz programme (Lambkin and Bartlett 2011); use of new tools for data publishing like the Global Biodiversity Information Facility (GBIF) Integrated Publishing Toolkit (IPT) and the DRYAD Data Repository; new forms of publication via ?data papers? that allow checklists and identification keys to be formally published as structured datasets (e.g., Narwade et al. 2011); and finally new taxonomic revisions and species descriptions constructed from within the collaborative systems like XPER2 and Scratchpads.

**A taxonomic revision of the Cymindis (Pinacodera) limbata species group (Coleoptera, Carabidae, Lebiini), including description of a new species from Florida, U.S.A.** Wesley M. Hunting,2013-01-16 The Cymindis (Pinacodera) limbata species group (Coleoptera, Carabidae, Lebiini) is a precinctive New World taxon with ranges extended from portions of temperate southeastern Canada and the U.S.A. through the montane regions of Mexico, south to the Isthmus of Tehuantepec. The group is distinguishable from all other members of the subgenus Pinacodera by males possessing a distinctive sclerite (endophallic plate) at the apex of the endophallus. In the past, a lack of material and misunderstandings of range of variation within species have contributed to confusion about how many species there really are. This revision of the limbata species group includes a classification, a key to groups within the subgenus Pinacodera and species within the limbata group, descriptions of species, re-rankings and new synonymies. In total 10 taxa are treated, with 6 new synonyms proposed, 1 new combination introduced and 1 new species described: *Cymindis* (Pinacodera) *rufostigma* (type locality: Archbold Biological Station, Highlands County, Florida, U.S.A.). Each taxon is characterized in terms of structural features of adults, habitat, geographical distribution, and chorological affinities. Available ecological information and treatments of variation are included.

**A life caught in a spider's web** Pavel Stoev,Jason Dunlop,Stoyan Lazarov,2009-07-29 This issue is dedicated to Dr. Christo Deltchev, the doyen of Bulgarian araneology. It contains seventeen arachnological publications, including a concise biography of Dr. Deltchev, a list of his scientific publications and his described taxa. The volume comprises taxonomic contributions in the spider families Hypochilidae, Sicariidae, Dysderidae, Hersiliidae, Theridiidae, Linyphiidae, Lycosidae, Dictynidae, Gnaphosidae, Sparassidae, Philodromidae and Salticidae and fossil taxa in the harvestmen suborders Dyspnoi and Eupnoi, written by a total of 36 authors. Four new genera and 37 new spider and harvestmen species have been described in this volume, and dozens of new taxonomic alterations (new combinations, new synonyms, new statuses, etc.) are proposed too. Geographically, the papers deal with material originating from Europe, Africa, Asia, North and South America. There is also an overview of the use of barcoding to identify spiders in species-rich genera.

**Imaging Marine Life** Emmanuel G. Reynaud,2013-11-19 Written by an international team of experts from the Tara Oceans Marine Biology Imaging Platform (TAOMI), this is the first and only compendium on marine imaging technologies, and includes all known underwater as well as on-land techniques. TAOMI is imaging the largest collection of marine organisms in recent history, ranging from viruses to corals, and is duplicated on land to perform high throughput confocal analysis of plankton, X-ray tomography as well as cryo-electron microscopy. This unique platform combines underwater imaging with cytometry, stereomicroscopy, fluorescence microscopy and 3D microscopy - all of which are covered in this practical book, along with remote sensing, MRI, and optical projection tomography. The definitive resource for every marine biologist who is planning to image marine species, whether underwater or on land.

**Systematics and Phylogeny of Weevils** Rolf Oberprieler,Adriana Marvaldi,Chris Lyal,2019-04-16 This Special Issue on the Systematics and Phylogeny of Weevils presents 31 new research papers on one of the most diverse and successful groups of animals on Earth, the beetle superfamily Curculionoidea. It was in part inspired to commemorate the extraordinary life and scientific achievements of Guillermo (‘‘Willy’’) Kuschel

(1918–2017), who shaped this field of science over the last century like no other weevil systematist. The papers in this memorial issue span weevil faunas from all over the globe, including South and Central America, Africa, Europe and the Near East, South-East Asia, New Guinea, Australia and New Zealand. They include major advances on the phylogeny and classification of the “broad-nosed” weevils (Entiminae), on the weevils associated with American cycads and on the unique extinct weevil fauna preserved in the 100-million-year-old Burmese amber, when weevils started to diversify alongside the oldest angiosperm plants. They comprise a tribute to Willy Kuschel, the proceedings of a weevil symposium held in his honor in 2016 in Orlando, Florida, 24 systematic studies (including seven phylogenetic analyses) and five other contributions on the diversity, biology, distribution, evolution and fossil history of weevils. In the papers collated in this volume, 30 new genera and 92 new species of weevils are described and a new family of extinct weevils is recognized.

*Memory and motivational/emotional processes* Antonella Gasbarri, Carlos Tomaz, It is well established that memory for emotional information is generally better than for neutral information. This Research Topic comprises a set of papers focusing on memory and its relation with motivational and emotional processes, ranging from electroencephalographic evidences of emotional modulation of memory systems, to the role of neurotransmitters/neuromodulators (i.e. endocannabinoid, glucocorticoid, serotonin, noradrenergic, dopaminergic systems), and second messengers on emotional memory, and the specific involvement of cerebral areas on the relation between memory and motivational/emotional processes (i.e. prefrontal cortex, amygdala, accumbens). In particular, some of the topics discussed in this Research Topic will include: cortical activity correlates of emotional modulation of memory systems, interactions between ascending vagal fibers and central noradrenergic systems in modulating memory for emotionally arousing events, involvement of prefrontal /accumbal catecholamine system in processing emotional and motivational salience, role of both negative and positive emotional arousal in increasing persistence of consolidated memories through modulation of second messengers and the involvement of emotional arousal in the activation of amygdala projections, that can then modulate different types of memory.

Multishot-Techniken in der Fotografie Jürgen Gulbins, Rainer Gulbins, 2017-04-13 Die Ausdrucksmöglichkeiten einer fotografischen Aufnahme sind limitiert. Die Wiedergabe dessen, was wir visuell wahrnehmen ist nur sehr begrenzt möglich. Der Tonwertumfang der Szene, der Blickwinkel, die Auflösung oder die Schärfentiefe wie wir sie sehen, können nur teilweise von der Kamera erfasst werden. Um diese technischen Grenzen unserer Kamera zu überwinden oder zu umgehen, kann man mehrere Einzelaufnahmen erzeugen und zu einem einzigen hochwertigen Bild verarbeiten. Diese Verfahren werden als Multishot-Techniken bezeichnet. Diese Multishot-Techniken ermöglichen es – teilweise auch in Kombination, den Tonwertumfang zu erweitern, das Rauschen zu reduzieren, die Tiefenschärfe zu vergrößern oder den Blickwinkel zu erweitern. Die Autoren setzen für die unterschiedlichen Aufgaben verschiedene Programme ein, darunter Photoshop, Lightroom sowie einige HDR-, Panorama- und Focus-Stacking-Programme, erklären die geeigneten Aufnahmetechniken, die Technik der Bildkombination mit Vor- und Nachbearbeitung und illustrieren dies anhand zahlreicher Beispiele. Das abschließende Kapitel zum Postprocessing zeigt einige Methoden, die häufig für die finale Bildoptimierung benötigt werden, sei es zum Anheben des lokalen Bildkontrasts, zum selektiven Abwedeln und Nachbelichten oder zum globalen und selektiven Schärfen. Auch Luminanzmasken werden behandelt. Das Buch setzt Grundkenntnisse der digitalen Fotografie voraus und eine Kamera, die sich manuell einstellen lässt.

**Understanding Light Microscopy** Jeremy Sanderson, 2019-05-06 Introduces readers to the enlightening world of the modern light microscope There have been rapid advances in science and technology over the last decade, and the light microscope, together with the information that it gives about the image, has changed too. Yet the fundamental principles of setting up and using a microscope rests upon unchanging physical principles that have been understood for years. This informative, practical, full-colour guide fills the gap between specialised edited texts on detailed research topics, and introductory books, which concentrate on an optical approach to the light microscope. It also provides comprehensive coverage of confocal microscopy, which has revolutionised light microscopy over the last few decades. Written to help the reader understand, set up, and use the often very expensive and complex modern research light microscope properly, Understanding Light Microscopy keeps mathematical formulae to a minimum—containing and explaining them within boxes in the text. Chapters provide in-depth coverage of basic microscope optics and design; ergonomics; illumination; diffraction and image formation; reflected-light, polarised-light, and fluorescence microscopy; deconvolution; TIRF microscopy; FRAP & FRET; super-resolution techniques; biological and materials specimen preparation; and more. Gives a didactic introduction to the light microscope Encourages readers to use advanced fluorescence and confocal microscopes within a research institute or core microscopy facility Features full-colour illustrations and workable practical protocols Understanding Light Microscopy is intended for any scientist who wishes to understand and use a modern light microscope. It is also ideal as supporting material for a formal taught course, or for individual students to learn the key aspects of light microscopy through their own study.

**No specimen left behind: mass digitization of natural history collections** Vincent Smith, 2012-07-20 Centuries of exploration and discovery have documented the diversity of life on Earth. Records of this biodiversity are, for the most part, distributed across varied and distinct natural history collections worldwide. This makes the task of extracting and mobilising the information within these collections an immense challenge. In this special issue of ZooKeys, 18 papers by 81 authors examine progress and prospects for mass digitising entire natural history collections. These papers provide a snapshot of activity, in what is a fast moving field that is seeing ever-increasing degrees of collaboration across disciplines and between collection-based institutions. Examples of research covered by these articles include a description to efforts to digitise 30 million plant, invertebrate and vertebrate specimens at NCB Naturalis in the Netherlands; new scanning and telemicroscopy solutions to digitise the millions of pinned insect specimens held in the Australian National Insect Collection and its European and North American counterparts; citizen science projects being used to crowdsource the transcription of thousands of specimen labels and field notebooks; and new data portals providing central access to millions of biological specimens across Europe. Many of these projects deal with the unique challenges associated with major collections that have built up over several centuries, with different communities of practices and different user communities. Despite many differences, standards for collection acquisition, preservation and documentation are broadly consistent, meaning that there is sufficient common ground to bring together the enormous amounts of data that are being exposed through mass digitisation efforts. These data will become the new frontier for natural history collection management and

research in the next decade.

**Systematics, conservation and morphology of the spider genus Tayshaneta (Araneae, Leptonetidae) in Central Texas Caves** Joel Ledford,Pierre Paquin,James Cokendolpher,Josh Campbell,Charles Griswold,2012-01-23 The spider genus Tayshaneta is revised based on results from a three gene phylogenetic analysis (Ledford et al. 2011) and a comprehensive morphological survey using scanning electron (SEM) and compound light micros-copy. The morphology and relationships within Tayshaneta are discussed and five species-groups are supported by phylogenetic analyses: the anopica group, the coeca group, the myopica group, the microps group and the sandersi group. Short branch lengths within Tayshaneta contrast sharply with the remaining North American genera and are viewed as evidence for a relatively recent radiation of species. Variation in troglomorphic morphology is discussed and compared to patterns found in other Texas cave invertebrates. Several species previously known as single cave endemics have wider ranges than expected, suggesting that some caves are not isolated habitats but instead form part of interconnected karst networks. Distribution maps are compared with karst faunal regions (KFR?s) in Central Texas and the implications for the conservation and recovery of Tayshaneta species are discussed. Ten new species are described: T. archambaulti sp. n., T. emeraldae sp. n., T. fawcetti sp. n., T. grubbsi sp. n., T. madla sp. n., T. oconnorae sp. n., T. sandersi sp. n., T. sprousei sp. n., T. vidrio sp. n. and T. whitei sp. n. The males for three species, T. anopica (Gertsch, 1974), T. devia (Gertsch, 1974) and T. microps (Gertsch, 1974) are described for the first time. Tayshaneta furtiva (Gertsch, 1974) and T. uvaldea (Gertsch, 1974) are declared nomina dubia as the female holotypes are not diagnosable and efforts to locate specimens at the type localities were unsuccessful. All Tayshaneta species are thoroughly illustrated, diagnosed and keyed. Distribution maps are also provided highlighting areas of taxonomic ambiguity in need of additional sampling.
