Photoshop 6 Killer Tips Scott Kelby,Felix Nelson,2001-10-03 When it comes to Photoshop(r), time is money, and this hot new book (from Scott Kelby and Felix Nelson, the team behind Photoshop User magazine) is all about speed, speed, and more speed! This book is all tips--there are no special effects: no flaming type, no glows, etc.--it's just packed cover-to-cover with nothing little-known tricks and tips that the pros use every day to get twice the work done in half the time. The idea behind this book comes from something that every great Photoshop book already has--those valuable little sidebar tips. We found that we often read those tips first, before we'd even actually read the chapter. The only problem is, there's just not enough of 'em. So we thought, Wouldn't it be cool if there was a Photoshop book, and the whole book, cover-to-cover, was nothing but those great sidebar tips. That's what we've created in this book, which is all about the fun (and bragging rights) that come with knowing all the inside tips. The reason why the book's slogan is speed kills!, is because this is the book that will make

you faster and more productive than ever so you can smoke the competition.

Prehistoric Life on the Mississippi Floodplain Richard W. Yerkes, 1987 At the confluence of the Illinois, the Missouri, and the Mississippi Rivers lies the American Bottom, a broad floodplain that prehistoric peoples inhabited for millennia. Precisely how did they live? What were their ties to the natural world around them? In this study, based upon some six years of intensive archeological and geological research at Labras Lake in St. Clair County, Illinois, Richard W. Yerkes interprets a wealth of important new data in a stimulating and original fashion. With a fine-tuned control of the data, Yerkes challenges prevailing theories based on simple classifications of stone tools according to shape or on simple models of diffuse and focal economies. He views environment as a dynamic factor in economic and cultural life, rather than as merely a backdrop to it. Using incident light microscopy, he examines wear patterns on stone tools to determine what activities were performed during each period the site was inhabited—the Late Archaic, the Late Woodland, and the Mississippian. As he documents environmental change at Labras Lake, he analyzes plant and animal remains in context to explore diet and seasonal patterns of subsistence and settlement. The result is a more accurate and detailed picture than ever before what prehistoric life on the Mississippi floodplain was like. Yerkes shows how to assess the duration and size of occupations and how to determine where and when true permanent settlements arose. What others call sedentary encampments he reveals as sequences of small residential occupations for a narrow range of activities during shorter, seasonal periods. His contribution to the study of the development of sedentism is potentially far-reaching and will interest many North American anthropologists and archeologists.
