Report of the Fourth Meeting of the Parties to the Agreement on Port State Measures to Prevent, Deter and Eliminate Illegal, Unreported and Unregulated Fishing Food and Agriculture

Organization of the United Nations ,2023-06-26 The Parties reviewed the status of the FAO Agreement on Port State Measures ("the Agreement" or PSMA) and recalled the decisions of the Third Meeting of the Parties. Progress and challenges in the implementation of the Agreement by Parties were discussed and the important role of regional fisheries bodies (RFBs), in particular regional fisheries management organizations (RFMOs), in supporting the implementation of the Agreement was highlighted. The Parties agreed on the operationalization of the Global Information Exchange System by the end of 2023 and adopted the Terms of Reference for the Technical Working Group on Information Exchange. The Parties emphasized that assistance to developing States Parties is critical for the effective implementation of the Agreement, and reiterated the need to make the multilateral-partner PSMA Part 6 Trust Fund administered by FAO operational. The Parties adopted A Strategy to Improve the Effectiveness of the Agreement on Port State Measures to Prevent, Deter and Eliminate Illegal, Unreported and Unregulated Fishing (the "Bali Strategy"). The Parties also agreed that the Terms of Reference of the PSMA Strategy ad hoc Working Group be modified to include the task of monitoring the effective implementation of the Agreement. The amended questionnaire for the Parties for the review and

assessment of the effectiveness of the PSMA, together with the new questionnaire for RFBs and other international organizations, were adopted. The programme of work was discussed and the Parties agreed on a schedule of PSMA meetings.

FinFETs and Other Multi-Gate Transistors J.-P. Colinge, 2008 This book explains the physics and properties of multi-gate field-effect transistors (MuGFETs), how they are made and how circuit designers can use them to improve the performances of integrated circuits. It covers the emergence of quantum effects due to the reduced size of the devices and describes the evolution of the MOS transistor from classical structures to SOI (silicon-on-insulator) and then to MuGFETs.

Global Conference on Tenure and User Rights in Fisheries 2018: Achieving Sustainable Development Goals by 2030, Yeosu, Republic of Korea, 10–14 September 2018 Food and Agriculture Organization of the United Nations, 2019-11-12 Marine and inland fisheries provide millions of people around the globe with food security and livelihood opportunities. Advancing knowledge on how the world's marine and inland capture fisheries are accessed, used, and managed using various types of rights-based approaches (RBAs) is a crucial step towards achieving the Sustainable Development Goals (SDGs) and attaining food and nutrition security and livelihood benefits. The Global

Conference on Tenure and User Rights in Fisheries 2018 created a neutral platform for a wide variety of participants, including government officials; fishers from industrial, small-scale and indigenous/traditional communities; fisheries-related stakeholders; nongovernment organizations (NGOs); civil society organizations (CSOs); intergovernmental organizations (IGOs); and academics from around the world. Sharing perceptions and experiences, participants exchanged information and concrete examples through case studies on how tenure and RBAs can harmonize the concepts of responsible fisheries, social and economic development as well as ideas and concerns about the fair and equitable application of user rights in capture fisheries. UserRights 2018 was a unique event that brought together both technical expertise and practical case studies, with the objective of using this diverse knowledge to advance the SDGs.

Wide Bandgap Semiconductor Based Micro/Nano Devices Jung-Hun Seo, 2019-04-25 While group IV or III-V based device technologies have reached their technical limitations (e.g., limited detection wavelength range or low power handling capability), wide bandgap (WBG) semiconductors which have band-gaps greater than 3 eV have gained significant attention in recent years as a key semiconductor material in high-performance optoelectronic and electronic devices. These WBG semiconductors have two definitive advantages for optoelectronic and electronic applications due to their large bandgap energy. WBG energy is suitable to absorb or emit ultraviolet (UV) light in

optoelectronic devices. It also provides a higher electric breakdown field, which allows electronic devices to possess higher breakdown voltages. This Special Issue seeks research papers, short communications, and review articles that focus on novel synthesis, processing, designs, fabrication, and modeling of various WBG semiconductor power electronics and optoelectronic devices.
