Museum Buildings Paul v Naredi-Rainer, Oliver Hilger, 2004 Museums are architectural trend-setters. Culture sponsoring and their increasing role as tourist attractions are guarantees for an ongoing boom in museum construction. A tradition and typology developed over the centuries, the experience gained in recent decades and cutting-edge technology all contribute to the practice of modern day museum building. History and form, site development, floor plan, air-conditioning and climate technology are just some examples of the subjects treated systematically in the first section of this design manual. Some 70 international museum case-studies exemplify solutions and emphasize specific museum design issues such as spatial organisation and arrangement, and lighting. Paul von Naredi-Rainer is an expert on the subject of museum construction and author of the widely read *Architektur und Harmonie* (Architecture and Harmony). Herbert Pfeiffer, Helmut F.O. Mäler and Hans-Jürgen Schmitz teach at Dortmund University, Oliver Hilger and Gerhard Kahlert at RWTH Aachen.

Evaluating Gas Network Capacities Thorsten Koch, Benjamin Hiller, Marc E. Pfetsch, Lars Schewe, 2015-03-17 This book deals with a simple sounding question whether a certain amount of gas can be transported by a given pipeline network. While well studied for a single pipeline, this question gets extremely difficult if we consider a meshed nation wide gas transportation network, taking into account all the technical details and discrete decisions, as well as regulations, contracts, and varying demand. This book describes several mathematical models to answer these questions, discusses their merits and disadvantages, explains the necessary technical and regulatory background, and shows how to solve this question using sophisticated mathematical optimization algorithms.--

Evaluating Gas Network Capacities Thorsten Koch, Benjamin Hiller, Marc E. Pfetsch, Lars Schewe, 2015-03-17 This book addresses a seemingly simple question: Can a certain amount of gas be transported through a pipeline network? The question is difficult, however, when asked in relation to a meshed nationwide gas transportation network and when taking into account the technical details and discrete decisions, as well as regulations, contracts, and varying demands, involved. This book provides an introduction to the field of gas transportation planning and discusses in detail the advantages and disadvantages of several mathematical models that address gas transport within the context of its technical and regulatory framework, shows how to solve the models using sophisticated mathematical optimization algorithms, and includes examples of large-scale applications of mathematical optimization to this real-world industrial problem. Readers will also find a glossary of gas transport terms, tables listing the physical and technical quantities and constants used throughout the book, and a reference list of regulation and gas business literature.
