The Distance Education Evolution Dominique Monolescu,Catherine Schifter,Linda Greenwood,2004-01-01 With the quantity and quality of available works in Information Systems (IS) research, it would seem advantageous to possess a concise list of exemplary works on IS research, in order to enable instructors of IS research courses to better prepare students to publish in IS venues. To that end, The Handbook of Information Systems Research provides a collection of works on a variety of topics related to IS research. This book provides a fresh perspective on issues related to IS research by providing chapters from world-renowned leaders in IS research along with chapters from relative newcomers who bring some interesting and often new perspectives to IS research. This book should serve as an excellent text for a graduate course on IS research methods.

Living Labs David V. Keyson,Olivia Guerra-Santin,Dan Lockton,2016-09-28 This book presents the results of a multi-annual project with sustainable Living Labs in the United Kingdom, Sweden, Germany and the Netherlands. Living Labs – as initiated by the authors – have proved to be very promising research, design, co-creation and communication facilities for the development and implementation of sustainable innovations in the home. The book provides an inspiring introduction to both the methodology and business modelling for the Living Lab facilities. Understanding daily living at home is key to designing products and services that support households in their transition to more sustainable lifestyles. This book not only explores new ways of gaining insights into daily practices, but also discusses developing and testing design methods to create sustainable solutions for households. These new methods and tools are needed because those available are either ineffective or cause rebound-effects. Intended for researchers and designers with an interest in the transition to sustainable lifestyles, it also appeals to company leaders interested in new ways of developing sustainable innovations and offers suggestions for effectively applying Living Labs for sustainable urban development.

Innovating in the Open Lab Albrecht Fritzsche,Julia M. Jonas,Angela Roth,Kathrin M. Möslein,2020-05-05 Open labs provide spaces for interaction across organizational boundaries. They create a huge potential to advance innovation processes. Making use of this potential, however, is not an easy task. It requires diligence, sophistication and perseverance from everyone involved in the implementation and the management of the lab. This

book brings together contributions from leading experts in engineering, design, strategy, foresight and marketing research as well as policy makers and practitioners from an open lab. It explores from different perspectives how open labs can be used to facilitate innovation and what needs to be done to make the operation of an open lab successful. The topics addressed in the book include: interaction patterns and mediation in open labs, innovation technology, resource management, ecosystem and platform design, cultural translation, productivity, multi-channel communication, and more. The first part of the book is dedicated to the study of JOSEPHS®, an open lab in Germany. It gives insight in the practical challenges of running an open lab and its role in the local business ecosystem. The other parts of the book discuss the phenomenon of open labs in general and its significance in different contexts all around the world.

Novel Innovation Design for the Future of Health Michael Friebe,2022-11-26 This book highlights the reasons for an urgently needed revision of the current global healthcare setup, discusses the needed mindset for a future of health, and provides a comprehensive development toolset for disruption (and for the needed incremental innovations towards disruption). Today's biomedical and health innovation related research in universities encourages activities that lead to incremental innovations with a relatively low risk of failure. The healthcare industry on the other hand provides tools and devices for established healthcare providers to improve the diagnosis and therapy/ treatment of the patients' health problems. The patient is not in the center of healthcare provision however, and prevention and prediction are not core goals. The current health setup needs to be challenged and disrupted. Disruptions are coming from technologies or processes that lead to a significant (>10x) reduction in cost or price/ performance and that also come with new business models. The need for change, effects of exponential technologies, and the needed shift to prevention and to homecare for health democratization and patient empowerment will be discussed in detail in the first parts of the book. The subsequent sections address several innovation methods with a focus on a novel meta methodology named Purpose Launchpad Health. This is followed by a comprehensive discussion on health entrepreneurship activities and needs. The final section of the book addresses how to train students to become entrepreneurial health innovators, presenting successful curricula and examples of health incubation and accelerator setups. All of the innovation tools presented and used in this book are summarized in the final chapter to help the reader get started planning an entrepreneurial venture. Written by experts from academia and industry, the book covers important basics and best practices, as well as recent developments. Chapters are concise and enriched with key messages, learning objectives and real innovation examples to bridge theory and practice. This book aims to serve as a teaching base for health innovation design and to prepare for health-related entrepreneurial ventures. Readers with medical, biomedical, biotechnology, and health economics backgrounds – and anyone who wants to become a future oriented health innovator or who believes in disruptive approaches – will find this book a useful resource and teaching tool for developing validated products/ services and processes for the future of health.

Designing Physical Interaction Platforms Maximilian Perez Mengual,2023-10-12 Physical interaction platforms (PIPs) such as living labs, innovation labs or co-working spaces serve as environments for ideas, experiments, and collaborative innovation. They play a key role in value creation by orchestrating ecosystem actors and facilitating interaction, e.g. the exchange of goods, services, or social currency such as information. This book explores how PIPs can be systematically designed. It adopts a platform perspective, focusing on value creation for manifold actors as a fundamental element for the sustainable operation of a platform. Well-established insights from the design of digital platforms are taken as a foundation and adapted to the physical world. This analysis is compiled of 4 major studies, structured along the lifecycle of a PIP. The first study explores design dimensions of PIPs as a basis for a design process. The second study explores the design process of a PIP itself. The third study explores sustainable innovation of PIP during later stages of their lifecycle. The fourth study applies the findings and models from studies 1-3 in a PIP design process and evaluates them. This book addresses both scholars and practitioners alike. The models and the knowledge generated contribute to the scholarly understanding of spaces for innovation and value creation while enabling designers to create sustainably successful and engaging PIPs.

Taking Design Thinking to School Shelley Goldman,Zaza Kabayadondo,2016-12-01 Design thinking is a method of problem-solving that relies on a complex set of skills, processes and mindsets that help people generate novel solutions to problems. Taking Design Thinking to School: How the Technology of Design Can Transform Teachers, Learners, and Classrooms uses an action-oriented approach to reframing K-12 teaching and learning, examining interventions that open up dialogue about when and where learning, growth, and empowerment can be triggered. While design thinking projects make engineering, design, and technology fluency more tangible and personal for a broad range of young learners, their embrace of ambiguity and failure as growth opportunities often clash with institutional values and structures. Through a series of in-depth case studies that honor and explore such tensions, the authors demonstrate that design thinking provides students with the agency and compassion that is necessary for doing creative and collaborative work, both in and out of the classroom. A vital resource for education researchers, practitioners, and policymakers, Taking Design Thinking to School brings together some of the most innovative work in design pedagogy.

Lern- und Bildungsräume Kurt Schmid,2019-01-21 Erwachsenenbildung hat sich historisch auch über ihre Räume definiert. In den letzten Jahren hat sich, angestoßen durch die Diskussion um neue Lernkulturen und neue Lernwelten, eine erweiterte Sicht auf Lernräume und -umgebungen entwickelt. Der Raumbegriff entgrenzt sich zunehmend. Er geht über geographische und auf Orte bezogene Dimensionen hinaus und nimmt auch die symbolischen und sozialen Beziehungen in den Blick. Was also macht einen Ort zum Lernort, wo sich Bildung im Sinne einer reflexiven Durchdringung von Welt entfalten kann? Theoriegeleitet, forschungsbasiert und praxisorientiert lotet die vorliegende Doppelausgabe des Magazin erwachsenenbildung.at in 22 Beiträgen aus, wie sich das Spannungsfeld zwischen Entgrenzung und Verortung, zwischen Pluralität und Spezifität aktuell gestaltet und welche örtlichen und räumlichen Dimensionen sich für Lern- und Bildungsräume eröffnen, welche Möglichkeiten – aber auch Gefahren und Grenzen – mit dieser Pluralisierung für die Erwachsenen- und Weiterbildung verbunden sind. Die Beiträge spannen historisch und thematisch einen reichen Bogen, beginnend beim sozialräumlichen Konzept des Hull House im 19. Jahrhundert, fortgeführt mit einem Rückblick auf die Lernortdiskussion der 1970er Jahre bis hin zu aktuellen Diskursen über den Lernort Betrieb und mit zahlreichen praktischen Beispielen wie etwa den Lernräumen Schutzgebiet, Museum oder dem Flüchtenden Café. Aktuell richtet sich der Fokus bei der Frage nach Lernräumen hauptsächlich auf digitalisierte Formen, wie unter anderem die Beiträge zu den digitalen Experimentierräumen Makerspaces und Hackerspaces aufzeigen.
