Proceedings of the First International Conference on Advanced Data and Information Engineering (DaEng-2013) Tutut Herawan, Mustafa Mat Deris, Jemal Abawajy, 2013-12-14 The proceeding is a collection of research papers presented at the International Conference on Data Engineering 2013 (DaEng-2013), a conference dedicated to address the challenges in the areas of database, information retrieval, data mining and knowledge management, thereby presenting a consolidated view to the interested researchers in the aforesaid fields. The goal of this conference was to bring together researchers and practitioners from academia and industry to focus on advanced on data engineering concepts and establishing new collaborations in these areas. The topics of interest are as follows but are not limited to: • Database theory • Data management • Data mining and warehousing • Data privacy & security • Information retrieval, integration and visualization • Information system • Knowledge discovery in databases • Mobile, grid and cloud computing • Knowledge-based • Knowledge management • Web data, services and intelligence

Echinoderms Part B, 2019-04-02 Echinoderms, Volume 151, the latest release in the Methods in Cell Biology series, highlights advances in the field, with this update presenting chapters on Echinoderm Genome Databases, analysis of gene regulatory networks, using ATAC-seq and RNA-seq to increase resolution in GRN connectivity, multiplex cis-regulatory analysis, experimental approaches GRN/signal pathways, BACs, analysis of chromatin accessibility using ATAC-seq, analysis of sea urchin proteins /Click IT, CRISPR/Cas9-mediated genome editing in sea urchins, super-resolution and in toto imaging of echinoderm embryos, and methods for analysis of intracellular ion signals in sperm, eggs and embryos. Presents clear, concise protocols provided by experts who have established the echinoderms as a model systems Highlights new advances in the field, with this update presenting interesting chapters on echinoderms

Animal Cell Technology: Basic & Applied Aspects T. Kobayashi, Y. Kitagawa, K. Okumura, 2012-12-06 Animal cell technology is a growing discipline of cell biology which aims to understand the structure, function and behaviour of differentiated animal cells, and especially the development of such abilities as are useful for industrial purposes. These developments range from clonal expansion of differentiated cells with useful abilities, to optimization of cell culture on industrial scale and modulation of the cells' abilities to produce drugs and monoclonal antibodies. The sixth volume in this series gives a complete review of today's state of the art in Japan, a country where this field is especially well advanced. It will be of interest to cell biologists, biochemists, molecular biologists, immunologists and other disciplines related to animal cell culture, working in the academic

environment as well as in (biotechnology or pharmaceutical) industry.

Protein Misfolding, Aggregation and Conformational Diseases Vladimir N. Uversky, Anthony Fink, 2007-11-24 Research indicates that most neurodegenerative diseases, systemic amyloidoses and many others, arise from the misfolding and aggregation of an underlying protein. This is the first book to discuss significant achievements in protein structure-function relationships in biochemistry, molecular biology and molecular medicine. The authors summarize recent progress in the understanding of the relationships between protein misfolding, aggregation and development of protein deposition disorders.

International Review of Cytology ,2001-09-26 International Review of Cytology presents current advances and comprehensive reviews in cell biology-both plant and animal. Articles included in this volume address such topics as genetic regulation of preimplantation embryo survival, photoreceptor and second-order cell mosaics in the retina of *Xenopus*, basement membrane and B-amyloid fibrillogenesis in Alzheimer's disease, regulation of microtubule-associated proteins, and dynein motors of the *Chlamydomonas* flagellum. Authored by some of the foremost scientists in the field, each volume provides up-to-date information and directions for future research.

Microstructural Characterisation of Fibre-Reinforced Composites John Summerscales, 1998-07-10 Over the last 50 years, great progress has been made in developing artificial fibre-reinforced composite materials, generally using filaments with microscopic diameters. A wide range of reinforcement forms, from random arrays to fully aligned, can be used for commercial applications, with the microstructure being a critical factor in realising the required properties in a material. This is the first up-to-date review of how to apply advanced microstructural characterisation techniques to fibre-reinforced composites. Each chapter is designed to offer both a stand-alone introduction to its topic and detailed referencing for follow-up research. With contributions from experts from around the world, the book will be an essential reference for materials scientists and research workers in industry and academia alike. Comprehensive and up-to-date review of the microstructural features of composites Covers a wide range of microstructure characterisation techniques

Inventing the AIDS Virus Peter Duesberg,1996 We know that to err is human, but the HIV/AIDS hypothesis is one hell of a mistake. I say this rather strongly as a warning. Duesberg has been saying it for a long time. Read this book. --Kary B. Mullis, Nobel Prize in Chemistry, 1993

Pathways of a Cell Biologist Shinya Inoué,2016-08-29 This book is the autobiography of Shinya Inoué, tracing his life from childhood to the present. Though he has made many contributions to science, perhaps the most remarkable one involves the visualization of dynamics in living cells by means of a polarizing light microscope, an innovation that changed the face of cell biology. Addressing readers curious to know why and how he achieved such success, the story begins with a prologue describing the end of World War II and Inoué's lifelong collaborator, the great cell biologist Katsuma Dan. Following the prologue, the author's childhood and teenage experiences during World War II are described, before the focus shifts to his scientific career and personal life. The book not only offers important tips for young researchers, it will also help them develop a passion for science.
