WebSphere Portal Collaboration Security Handbook Budi Darmawan, Andri Firtiyan, Charles Price, 2004 Security is the hottest topic in the current Web-centric computing environment. This issue becomes the single largest concern for IT professionals who are stakeholders for Web applications, such as administrators, programmers, and users. In this IBM Redbooks publication, we discuss this security issue with the implementation of IBM WebSphere Portal Extend for Multiplatforms in an IBM Lotus collaborative environment. This discussion is scenario-based and aims to assist in the deployment of WebSphere Portal with Lotus Collaborative Components in a secure implementation. We describe several degrees of security, noting their advantages and disadvantages. The primary goal of this scenario is to have a WebSphere Portal server with Lotus Team Workplace (formerly called QuickPlace) and Lotus Instant Messaging and Web Conferencing (formerly called Sametime) environment set up and running securely. We discuss proxy authentication with IBM Tivoli Access Manager for e-business Version 5.1 and discuss the use of various identity providers, such as IBM Tivoli Directory Server, Domino LDAP, and Microsoft Active Directory.

IBM FlashSystem A9000R Product Guide (Version 12.3.2) Bert Dufrasne, Stephen Solewin, Francesco Anderloni, Roger Eriksson, Lisa Martinez, IBM Redbooks, 2019-06-10 This IBM® Redbooks® Product Guide is an overview of the main characteristics, features, and technology that are used in IBM FlashSystem® A9000R Model 415 and Model 425, with IBM FlashSystem A9000R Software V12.3.2. Software version 12.3.2, with Hyper-Scale Manager version 5.6 or later, introduces support for VLAN tagging and port trunking.. IBM FlashSystem A9000R is a grid-scale, all-flash storage platform designed for industry leaders with rapidly growing cloud storage and mixed workload environments to help drive your business into the cognitive era. FlashSystem A9000R provides consistent, extreme performance for dynamic data at scale, integrating the microsecond latency and high availability of IBM FlashCore® technology. The rack-based offering comes integrated with the world class software features that are built with IBM Spectrum™ Accelerate. For example, comprehensive data reduction, including inline pattern removal, data deduplication, and compression, helps lower total cost of ownership (TCO) while the grid architecture and IBM Hyper-Scale framework simplify and automate storage administration. The A9000R features always on data reduction and now offers intelligent capacity management for deduplication. Ready for the cloud and well-suited for large deployments, FlashSystem A9000R delivers predictable high performance and ultra-low latency, even under heavy workloads with full data reduction enabled. As a result, the grid-scale architecture maintains this performance by automatically self-optimizing workloads across all storage resources without manual intervention.

Building IBM Enterprise Content Management Solutions From End to End Wei-Dong Zhu, Ben Davies, Isuru Fernando, Blair Groff, Sven Hapke, Abraruddin Khan, Johnson Liu, Josemina Magdalen, Yuki Makino, Mike Prentice, IBM Redbooks, 2014-10-22 IBM® Enterprise Content Management (ECM) solutions provide efficient and effective ways to capture content, manage the content and business processes, discover insights from the content, and derive actions to improve business processes, products, and services. This IBM Redbooks® publication introduces and highlights some of the IBM ECM products that can be implemented and integrated together to create end-to-end ECM solutions: IBM Case Manager IBM Datacap IBM Content Manager OnDemand IBM Enterprise Records IBM Watson™ Content Analytics IBM Content Classification For each product involved in the ECM solution, this IBM Redbooks publication briefly describes what it is, its functions and capabilities, and provides step-by-step procedures for installing, configuring, and implementing it. In addition, we provide procedures for integrating these products together to create an end-to-end ECM solution to achieve the overall solution objectives. Not all of the products are required to be integrated into an ECM solution. Depending on your business requirements, you can choose a subset of these products to be built into your ECM solutions. This book serves as a hands-on learning guide for information technology (IT) specialists who plan to build ECM solutions from end-to-end, for a proof of concept (PoC) environment, or for a proof of technology environment. For implementing a production-strength ECM solution, also refer to IBM Knowledge Center, IBM Redbooks publications, and IBM Software Services.

IBM Software Defined Environment Dino Quintero, William M Genovese, KiWaon Kim, Ming Jun MJ Li, Fabio Martins, Ashish Nainwal, Dusan Smolej, Marcin Tabinowski, Ashu Tiwary, IBM Redbooks, 2015-08-14 This IBM® Redbooks® publication introduces the IBM Software Defined Environment (SDE) solution, which helps to optimize the entire computing infrastructure--compute,

storage, and network resources--so that it can adapt to the type of work required. In today's environment, resources are assigned manually to workloads, but that happens automatically in a SDE. In an SDE, workloads are dynamically assigned to IT resources based on application characteristics, best-available resources, and service level policies so that they deliver continuous, dynamic optimization and reconfiguration to address infrastructure issues. Underlying all of this are policy-based compliance checks and updates in a centrally managed environment. Readers get a broad introduction to the new architecture. Think integration, automation, and optimization. Those are enablers of cloud delivery and analytics. SDE can accelerate business success by matching workloads and resources so that you have a responsive, adaptive environment. With the IBM Software Defined Environment, infrastructure is fully programmable to rapidly deploy workloads on optimal resources and to instantly respond to changing business demands. This information is intended for IBM sales representatives, IBM software architects, IBM Systems Technology Group brand specialists, distributors, resellers, and anyone who is developing or implementing SDE.

IBM Tivoli Composite Application Manager Family Installation, Configuration, and Basic Usage Budi Darmawan, Aleem Subhedar, Celena Tan, David Rintoul, Howard Anglin, Huang Chuan, Prem Lall, Pradeep Nambiar, Rohit Dhall, Ronaldo Pires, Sathyabama Kuppusamy, 2008 This IBM® Redbooks® publication describes the IBM Tivoli® Composite Application Manager (ITCAM) family of products. The Composite Application Manager family currently consists of: - IBM Tivoli Composite Application Manager for WebSphere® - IBM Tivoli Composite Application Manager for J2EETM - IBM Tivoli Composite Application Manager for Web Resources - IBM Tivoli Composite Application Manager for Response Time Tracking - IBM Tivoli Composite Application Manager for Response Time - IBM Tivoli Composite Application Manager for SOA - IBM Tivoli Composite Application Manager for Internet Service Monitoring - IBM Tivoli Composite Application Manager for CICS® Transactions - IBM Tivoli Composite Application Manager for IMSTM Transactions The aim of IBM Tivoli Composite Application Manager is to simplify and enhance distributed application management. Application components can reside on multiple servers, across different platforms and J2EE environments, even through mainframes. The complexity of understanding and solving application-related problems, typically around performance issues, requires a cohesive set of tools to provide an end-to-end view of the application. The discussion that we provide in this book mainly consists of the basic installation and configuration of the products. The discussion is aimed at augmenting the information provided in the product manuals. Consult the appropriate product manual before starting to implement these products. We provide usage scenarios in this book as a demonstration of using these products in our sample environment. We use a single application environment that can be managed by all of the products.
