**The nEU-Med project: Vetricella, an Early Medieval royal property on Tuscany's Mediterranean**  
Giovanna Bianchi, Richard Hodges, 2020-04-20 The nEU-Med project is part of the Horizon 2020 programme, in the ERC Advanced project category. It began in October 2015 and the University of Siena is the host institution of the project. The project is focussed upon two Tuscan riverine corridors leading from the Gulf of Follonica in the Tyrrhenian Sea to the Colline Metallifere. It aims to document and analyze the form and timeframe of economic growth in this part of the Mediterranean, which took place between the 7th and the 12thc. Central to this is an understanding of the processes of change in human settlements, in the natural and farming landscapes in relation to the exploitation of resources, and in the implementation of differing political strategies. This volume presents the multi-disciplinary research focussed upon the key site of the project, Vetricella, and its territory. Vetricella is thought to be the site of Valli, a royal property in the Tuscan march. It is the only Early Medieval property to be extensively studied in Italy. Located on Italy's Tyrrhenian coast, the archaeology and history of this site provide new insights on estate management, metal production and wider Mediterranean relations in the later first millennium. Apart from reports on the archaeology, the finds from excavations and environmental studies, three essays consider the wider European historical and archaeological context of Vetricella. Future monographs will feature studies by members of the project team on aspects of Vetricella, its finds and territory.

*Roman and Medieval Development South of Newgate* Ken Pitt, 2006 Important new evidence of Londons 2nd-century AD Roman pottery industry has been found along the western side of a tributary of the Walbrook stream. Up to eight kilns, producing Verulamium region white ware, and a probable potters workshop represent two phases of production. The findings indicate that much of the pottery thought to have been produced outside the settlement may come from these kilns. Pottery production went into decline in the second half of the 2nd century AD, though residual evidence was found of nearby glass working and other industries. Later Roman and medieval activity was largely truncated by modern basements.

*Nutrigenomics and Nutraceuticals* Yashwant V. Pathak,Ali M. Ardekani,2017-09-29 Genomics and related areas of research have contributed greatly to the understanding of the cellular and molecular mechanisms underlying diet–disease relationships. In the past decade, the evidence has become stronger for a direct link between genome/epigenome damage and increased risk for adverse health outcomes. It is now exceedingly clear that micronutrients are critical as cofactors for many cellular functions, including DNA repair enzymes, methylation of CpG sequences, DNA oxidation, and/or uracil incorporation into DNA. *Nutrigenomics and Nutraceuticals: Clinical Relevance and Disease Prevention* brings new perspectives on disease prevention strategy based on the genomic knowledge and nutraceuticals of an individual and the diet he or she receives. This book discusses the integration and application of genetic and genomics technology into nutrition research and paves the way for the development of nutrition research programs that are aimed at the prevention and control of chronic disease through genomics-based nutritional interventions. In this book, the editors bring together a wide spectrum of nutritional scientists worldwide to contribute to the growing knowledge in the field of nutrigenomics and nutraceuticals.

### **Neurological Outcomes in Preterm Infants – Current Controversies and Therapies for Brain Injury**

Carina Mallard,Mary Tolcos,Justin Dean,2020-02-10 Preterm birth affects over 15 million newborns worldwide each year and is the main contributor of neonatal mortality and morbidity. While neonatal survival following preterm birth continues to improve, this has not been matched by a decline in neurological outcome. There is still a high prevalence of motor problems, executive dysfunction, and cognitive impairment in infants born preterm. Improved neuroimaging has helped to describe different types of neonatal brain injuries in this population and has given a better understanding of underlying pathogenesis. However, therapies are still lacking and there is a great need to find novel strategies to improve injury and functional outcome.
