Practitioners will find this handbook useful when looking for solutions to practical problems. Researchers can use it for quick access to the background, current trends and most important references regarding a certain topic. The handbook consists of two volumes. Undertaking Systematic Reviews of Research on Effectiveness University of York. NHS Centre for Reviews & Dissemination, 2001 The NHS Centre for Reviews and Dissemination (CRD) first produced guidance for undertaking systematic reviews in 1996 in its Report Number 4. The original document provided a framework for carrying out systematic reviews of effectiveness and was used extensively to ensure a high standard in conducting reviews both by CRD and by other research groups. Although the principles behind reviewing research evidence systematically remain the same, various aspects of review methodology have developed substantially since that time. Therefore, the second edition of Report Number 4 updates the original guidance on effectiveness reviews. Recently, the growing use of systematic reviews in health policy and decision-making has placed new demands on reviewers who are increasingly being required to meet multiple objectives in reviews. The second edition responds to these developments by providing new guidance on the

evaluation of tests, qualitative research and health economics in the context of effectiveness reviews. The purpose of this document is to provide practical guidance about various aspects of reviews in the light of current understanding of review methodology.

The information provided puts new capabilities at the hands of technology managers. Using the material present, these managers can identify and access the most valuable technology information resources (publications, patents, etc.); search, retrieve, and clean the information on topics of interest; and lower the costs and enhance the benefits of competitive technological intelligence operations.

Using the Engineering Literature Bonnie A.

Osif, 2006-08-23 The field of engineering is becoming increasingly interdisciplinary, and there is an ever-growing need for engineers to investigate engineering and scientific resources outside their own area of expertise. However, studies have shown that quality information-finding skills often tend to be lacking in the engineering profession. Using the Engineerin
