Smart and Sustainable Food Technologies Shalini

Sehgal, Barinderjit Singh, Vasudha Sharma, 2022-05-13 This book presents a comprehensive view of emerging smart technologies in various food processing sectors. Specifically, it covers smart technologies applied in food production, food manufacturing, food packaging, storage, distribution, and food supply chain. Contributing authors are the key scientists with diverse backgrounds in either industry or academia. The book contains four parts with four chapters each, presenting recent smart technologies developed in their respective areas. Part I primarily focuses on the recent smart food production innovations such as precision agriculture, vertical farming, automation, robotics, livestock technology, modern greenhouse practices, artificial intelligence, and block chain that dramatically increase the quality of raw materials for the food industry. Part II provides the current knowledge and developments related to the recent smart technologies in manufacturing pertaining to various food sectors, non-thermal food preservation technologies, and 3D printing, developed for the food manufacturing industries that improve the organoleptic and nutritional quality, enhance chemical and microbial safety, as well as cost-effectiveness and convenience of processed foods. Part III covers smart technologies to ensure food safety in the supply chain, with monitoring and surveillance of food contamination, use of IoT and blockchain for food traceability and neural network approach for risk assessment. Part IV provides expert opinions on using smart technologies for minimizing waste and maximizing co-product recovery in food processing; upcycling technologies in food and sustainable value stream mapping in the food industry. This book will be a useful resource to graduate/undergraduate students and researchers in advanced food technology, practicing technologists/engineers in the food and related industries, food packaging industry, entrepreneurs and other scientists and technologists in smart and sustainable

processes who seek information on design and development of these processes.

Innovations in Agriculture for a Self-Reliant India P.K.

Ghosh,Prabhat Kumar,Debashis Chakraborty,Debashis Mandal,P.N. Sivalingam,2021-11-30 The book brings out an encyclopaedic picture of the potential areas of transformative Indian agriculture through innovations in science, technology, institutional and policy affairs directed in building a self-reliant India (Atmanirbhar Bharat). The book has addressed the challenges to make India free from hunger, poverty and undernutrition, and suggested interventions with focus on all-inclusiveness and sustainability, peace and prosperity, and resilience to climate and other volatilities. Most of these propositions are analogous to the Sustainable Development Goals – Agenda 2030, which India has committed to achieve. The book especially covers critical needs for development on different fragile ecosystems such as coastal, desert, hill, ravine and other marginal ecosystems. The book will act as very useful guidance for the policy makers, and development communities, and a reference document to academicians as well. Note: T&F does not sell or distribute the hardback in India, Pakistan, Nepal, Bhutan, Bangladesh and Sri Lanka. This title is co-published with NIPA.

Jews and the Law Ari Mermelstein, Victoria Saker

Woeste, Ethan Zadoff, Marc Galanter, 2014-06-10 Jews are a people of law, and law defines who the Jewish people are and what they believe. This anthology engages with the growing complexity of what it is to be Jewish — and, more problematically, what it means to be at once Jewish and participate in secular legal systems as lawyers, judges, legal thinkers, civil rights advocates, and teachers. The essays in this book trace the history and chart the sociology of the Jewish legal profession over time, revealing new stories and dimensions of this significant aspect of the American Jewish experience and at the same time exploring the impact of Jewish lawyers and law firms on American legal practice. “This superb collection reveals what an older focus on assimilation obscured. Jewish lawyers wanted to ‘make it,’ but they also wanted to make law and the legal profession different and better. These fascinating essays show how, despite considerable obstacles, they succeeded.” — Daniel R. Ernst Professor of Law, Georgetown University Law Center Author of *Tocqueville’s Nightmare: The Administrative State Emerges in America, 1900-1940* “This fascinating collection of essays by distinguished scholars illuminates the distinctive and intricate relationship between Jews and law. Exploring the various roles of Jewish lawyers in the United States, Germany, and Israel, they reveal how the practice of law has variously expressed, reinforced, or muted Jewish identity as lawyers demonstrated their commitments to the public interest, social justice, Jewish tradition, or personal ambition. Any student of law, lawyers, or Jewish values will be engaged by the questions asked and answered.” — Jerold S. Auerbach Professor Emeritus of History, Wellesley College Author

of Unequal Justice and Rabbis and Lawyers

The Cambridge Companion to Judaism and Law Christine Hayes, 2017-02-17 The Cambridge Companion to Judaism and Law provides a conceptual and historical account of the Jewish understanding of law.

Handbook of sol-gel science and technology. 3. Applications of sol-gel technology Sumio Sakka, 2005 Since Dr. Dislich of Germany prepared a glass lens by the sol-gel method around 1970, sol-gel science and technology has continued to develop. Since then this field has seen remarkable technical developments as well as a broadening of the applications of sol-gel science and technology. There is a growing need for a comprehensive reference that treats both the fundamentals and the applications, and this is the aim of Handbook of Sol-Gel Science and Technology. The primary purpose of sol-gel science and technology is to produce materials, active and non-active including optical, electronic, chemical, sensor, bio- and structural materials. This means that sol-gel science and technology is related to all kinds of manufacturing industries. Thus Volume 1, Sol-Gel Processing, is devoted to general aspects of processing. Newly developed materials such as organic-inorganic hybrids, photonic crystals, ferroelectric coatings, photocatalysts will be covered. Topics in this volume include: Volume 2, Characterization of Sol-Gel Materials and Products, highlights the important fact that useful materials are only produced when

characterization is tied to processing. Furthermore, characterization is essential to the understanding of nanostructured materials, and sol-gel technology is a most important technology in this new field. Since nanomaterials display their functional property based on their nano- and micro-structure, characterization is very important. Topics found in Volume 2 include: Sol-gel technology is a versatile technology, making it possible to produce a wide variety of materials and to provide existing substances with novel properties. This technology was applied to producing novel materials, for example organic-inorganic hybrids, which are quite difficult to make by other fabricating techniques, and it was also applied to producing materials based on high temperature superconducting oxides. Applications of Sol-Gel Technology, (Volume 3), will cover applications such as:
