Encyclopedia of Environmental Management, Four Volume Set Sven Erik Jorgensen, 2012-12-13 Winner of an Outstanding Academic Title Award from CHOICE Magazine Encyclopedia of Environmental Management gives a comprehensive overview of environmental problems, their sources, their assessment, and their solutions. Through in-depth entries and a topical table of contents, readers will quickly find answers to questions about specific pollution and management issues. Edited by the esteemed Sven Erik Jørgensen and an advisory board of renowned specialists, this four-volume set shares insights from more than 500 contributors—all experts in their fields. The encyclopedia provides basic knowledge for an integrated and ecologically sound management system. Nearly 400 alphabetical entries cover everything from air, soil, and water pollution to agriculture, energy, global pollution, toxic substances, and general pollution problems. Using a topical table of contents, readers can also search for entries according to the type of problem and the methodology. This allows readers to see the overall picture at a glance and find answers to the core questions: What is the pollution problem, and what are its sources? What is the big picture, or what background knowledge do we need? How can we diagnose the problem, both qualitatively and quantitatively, using monitoring and ecological models, indicators, and services? How can we solve the problem with environmental technology, ecotechnology, cleaner technology, and environmental legislation? How do we address the problem as part of an integrated management strategy? This accessible encyclopedia examines the entire spectrum of tools available for environmental management. An indispensable resource, it guides environmental managers to find the best possible solutions to the myriad pollution problems they face. Conservation Genetics in Mammals Jorge Ortega, Jesus E. Maldonado, 2020-01-24 This book focuses on the use of molecular tools to study small populations of rare and endangered mammals, and presents case studies that apply an evolutionary framework to address innovative questions in the emerging field of mammalian conservation genomics using a highly diverse set of novel molecular tools. Novel and more precise molecular technologies now allow experts in the field of mammalogy to interpret data in a more contextual and empirical fashion and to better describe the evolutionary and ecological processes that are responsible for the patterns they observe. The book also demonstrates how recent advances in genetic/genomic technologies have been applied to assess the impact of environmental/anthropogenic changes on the health of small populations of mammals. It examines a range of issues in the field of mammalian conservation genomics, such as the role that the genetic diversity of the immune system plays in disease protection and local adaptation; the use of noninvasive techniques and genomic banks as a resource for monitoring and restoring populations; the structuring of population by physical barriers; and genetic diversity. Further, by integrating research from a variety of areas - including population genetics, molecular ecology, systematics, and evolutionary and conservation biology - it enables readers to gain a deeper understanding of the conservation biology of mammals that are at increasing risk of extinction at local, regional and global scales. As such, it offers a unique resource for a broad readership interested in the conservation biology of mammals and conservation management strategies to better preserve biodiversity.

The Great Filling Station Holdup Josh Pachter, Leigh Lundin, Rick Ollerman, Michael Bracken, Don Bruns, Alison McMahan, Bruce Robert Coffin, Lissa Marie Redmond, Elaine Viets, Robert J. Randisi, Laura Oles, Isabella Maldonado, Jeffery Hess, Neil Plakcy, John M. Floyd, M.E. Browning, 2021-02-22 Jimmy Buffett is one of the great contemporary singer/songwriters, and it's hard to imagine a citizen of Planet Earth unfamiliar with such classic hits as "Margaritaville." Jimmy has also written novels, children's books, memoirs, and a stage musical based on Herman Wouk's Don't Stop the Carnival, and his family-friendly concerts almost always sell out to audiences comprised of a mix of dedicated Parrotheads, casual fans, and newbies. In The Great Filling Station Holdup, editor Josh Pachter presents sixteen short crime stories by sixteen popular and up-and-coming crime writers, each story based on a song from one of the twenty-nine studio albums Jimmy has released over the last half century, from Leigh Lundin's take on "Truckstop Salvation" (which appeared on Jimmy's first LP, 1970's Down to Earth) to M.E. Browning's interpretation of "Einstein Was a Surfer" (from 2013's Songs from St. Somewhere). If you love Jimmy's music or crime fiction or both, you'll love The Great Filling Station Holdup. Mix yourself a boat drink, ask Alexa to put on a buffet of Buffett tunes, kick back, and enjoy! Nervous Systems and Control of Behavior Charles Derby,Martin Thiel,2014-09-24 Crustacean Nervous Systems and their Control of Behavior is the third volume of the series The Natural History of the Crustacea. This volume is on the functional organization of crustacean nervous systems, and how those nervous systems produce behavior. It complements other volumes on related topics of feeding biology, reproductive biology, endocrine systems, and behavioral ecology. There is a rich history of the study of the neurobiology of crustaceans, going back over 150 years. This has included studies on how their nervous systems allow them to perform behaviors that are adapted to their particular environments, as well as studying them as model organisms to understand basic biomedical principles about neural function, such as sensory transduction and processing, synaptic transmission and integration, neuromodulation, and learning and memory. The volume has three sections that build progressively on each other. The first section is on the basic organizational features of the crustacean nervous system and the principles upon which it is built. The second section is on sensory ecology – the organization of each sensory system and how it is used in intra- and interspecific interactions, within an ecological context. The third section uses case studies of how crustacean nervous systems are organized to perform complex behaviors and interactions, such as walking, escape, social interactions, and memory and learning. Taken together, the 20 chapters synthesize our modern understanding of the neural control of behavior in crustaceans, based on the most recent technologies in physiological recording, molecular biology, and computational science. This volume will be useful to students and researchers as a concise summary of current knowledge of crustacean neuroscience.

Renal Pharmacology Manuel Martinez-Maldonado,2013-06-29 Frequently attempts to design experiments utilizing the methodology de scribed in articles in trade journals can be frustrating. Description of procedures, because of space constraints, are not always complete. The present volume attempts to bring together in one reference source many of the techniques which are utilized in the study of the kidney. It provides a thorough compendium of research tools, framed by the critical analysis of the theoretical background of renal physiology, biochemistry, and pharmacology discussed in Volume 4A. Some areas previously dealt with are not covered from a methodological point of view since adequate information does exist elsewhere (e.g., methods of whole kidney ATPase isolation). Since drugs acting on the kidney may alter not only functional but anatomical integrity, a chapter on the preparation of tissue for morphological studies has been included. The important developments in analy sis of minute (ultramicro) quantities of tissue and biological fluids, as well as methodological advances in studies of the isolated kidney, are thoroughly covered. It is my hope that investigators, research fellows, and graduate students will benefit from the information contained in this volume and that, together with its companion tome, it will be a ready reference for the renal physiologist, the renal pharmacologist, and the nephrologist. The contributors have provided painstaking descriptions and, when re quired, mathematical analyses of the techniques described herein. I wish to thank all of them for their enthusiasm and the excellence of their contributions.

Endocannabinoids and Lipid Mediators in Brain Functions Miriam Melis,2017-05-30 The science of cannabinoids is 50 years old. These past years provided a remarkable and constant number of breakthroughs, showing that the signaling mediated by endocannabinoids and lipid mediators impacts almost every function of the body. Indeed, this represents a special field of research, which allows tackling the complexity of biological functions, and provides potential therapeutic frameworks for a plethora of diseases. The number of exciting discoveries brought up to the scientific community almost on a daily basis highlights the importance of an updated volume on this topic. Particularly, given that potential therapeutic benefits of cannabis and cannabinoids are currently under heavy analysis in many Countries worldwide. Hence, the main objective of this book is to explore not only some of the many functions of endocannabinoids (and lipid mediators) in physiological control of networks at a cellular and molecular level, but also to extend this knowledge for potential use of cannabinoids and/or drugs regulating endocannabinoid levels in vivo as therapeutic target(s) in neurological and neuropsychiatric disorders. In this book new findings and ideas about the endocannabinoid system and its roles as neuronal circuit modulator related to human brain pathologies characterized by alterations in neuroplasticity will be highlighted. Endocannabinoid roles in key systems controlling appetite, pain, learning and memory, as well as sleep and stress responses will be presented. In addition, pathological processes associated with changes in endocannabinoid signaling will be discussed in the context of anxiety, autism, depression and addiction. This book will provide an excellent background to researchers looking for extending their areas of interest, and to newcomers in the field.
