Publishing and Consuming Linked Data L.

Rietveld,2016-03-22 This dissertation addresses several problems in the context of publishing and consuming Linked Data. It describes these problems from the perspectives of three stakeholders: the Linked Data provider, developer and scientist. The Linked Data provider is faced with impractical data re-use and costly Linked Data hosting solutions. Developers face difficulties in finding, navigating and using Linked Datasets. Scientists lack the resources and methods to evaluate their work on Linked Data at large. This dissertation presents a number of novel approaches that address these issues, such as: - The LOD Laundromat: a centralized service that re-publishes cleaned, queryable and structurally annotated Linked Datasets. In 2015 the Laundromat was awarded first prize in the Dutch national Linked Open Data competition, and third prize in the European equivalent; - SampLD: A relevance-based sampling algorithm that enables publishers to decrease Linked Data hosting costs; - YASGUI: A feature-rich query editor for accessing SPARQL endpoints; - LOD Lab: An evaluation paradigm that enables scientists to increase the breadth and scale of their Linked Data evaluations. This work provides a unique overview of problems related to publishing and consuming Linked Data. The novel approaches presented here improve the state-of-the-art for Linked Data publishers, developers and scientists, and are a step towards a web of Linked

Data that is more accessible and technically scalable.

Understanding Semantics-Based Decision Support

Sarika Jain, 2021-01-18 1) This book is an attempt to establish in the readers the importance of creating interoperable data stores and writing rules for handling this data. It describes the power of ontologies for better data management and provides an overview of knowledge engineering including ontology engineering, tools and techniques. 2) As a reference book, to the best of the author's knowledge, this is a first book of its kind discussing what is going on in knowledge based systems' research. Specifically, Chapter 2 provides a review on the Ontological Engineering practices and reasoning 3) The field of Semantic Web Technologies and even of Semantic Web is emerging. It is the talk of the future.

E-business Applications for Product Development and Competitive Growth In Lee, 2011 As the Web paradigm shifted from the business-centered to user- centered one (this paradigm shift has become known as Web 2.0) it has become a Web platform as a method to quickly reach a large pool of consumers. Web 2.0 has changed the nature of a user from a content consumer to a content generator. While the pre-Web 2.0 era is characterized by read-only websites and proprietary web applications, Web 2.0 brought about a variety of interactive community-based initiatives that leverage data, harness distributed intelligence, and utilize a rich multimedia. E-Business Applications for Product Development and Competitive Growth: Emerging

Technologies is a comprehensive framework of knowledge provided by research and practitioner experts within the e-business research field. Emerging e-business theories, architectures, and technologies are outlined to stimulate information into research and business communities. This book will serve as an integrated e-business knowledge base for those who are interested in the advancement of e-business theory and practice through a variety of research methods including theoretical, experimental, case, and survey research methods.

Building Natural Language Generation Systems

Ehud Reiter, Robert Dale, 2000-01-28 This book explains how to build Natural Language Generation (NLG) systems - computer software systems which use techniques from artificial intelligence and computational linguistics to automatically generate understandable texts in English or other human languages, either in isolation or as part of multimedia documents, Web pages, and speech output systems. Typically starting from some non-linguistic representation of information as input, NLG systems use knowledge about language and the application domain to automatically produce documents, reports, explanations, help messages, and other kinds of texts. The book covers the algorithms and representations needed to perform the core tasks of document planning, microplanning, and surface realization, using a case study to show how these components fit together. It also discusses engineering issues such as system architecture, requirements analysis, and the integration of text generation

into multimedia and speech output systems.

Functional Analysis of Problem Behavior Alan C. Repp, Robert H. Horner, 1999 Contains several articles by experts in the fields of special education and psychology. Each article explores the issues, theories, and practices of assessing problem behavior and determining how to use this information. Together, the articles of this text present current advances in the use of functional assessment technology: taking the techniques and strategies of traditional functional analysis and using this information to construct clinical interventions. Three sections focus on the following topics: how functional assessment can be used to intervene effectively and change problem behavior, common procedures for using functional assessment in the preschool and school classroom, and new directions and trends in the field of functional assessment. A thorough and well-researched base of knowledge on problem behavior is provided, and the student learns the many ways in which this behavior may be diagnosed, intervened, and ideally changed.

Semantic Web Services Rudi Studer, Stephan Grimm, Andreas Abecker, 2007-05-23 In this volume, Rudi Studer and his team deliver a self-contained compendium about the exciting field of Semantic Web services, starting with the basic standards and technologies and also including advanced applications in eGovernment and eHealth. The contributions provide both the theoretical background and the practical knowledge necessary to understand the essential ideas and to design new cutting-edge applications.

Design Science Methodology for Information Systems and Software Engineering Roel J.

Wieringa, 2014-11-19 This book provides guidelines for practicing design science in the fields of information systems and software engineering research. A design process usually iterates over two activities: first designing an artifact that improves something for stakeholders and subsequently empirically investigating the performance of that artifact in its context. This “validation in context” is a key feature of the book - since an artifact is designed for a context, it should also be validated in this context. The book is divided into five parts. Part I discusses the fundamental nature of design science and its artifacts, as well as related design research questions and goals. Part II deals with the design cycle, i.e. the creation, design and validation of artifacts based on requirements and stakeholder goals. To elaborate this further, Part III presents the role of conceptual frameworks and theories in design science. Part IV continues with the empirical cycle to investigate artifacts in context, and presents the different elements of research problem analysis, research setup and data analysis. Finally, Part V deals with the practical application of the empirical cycle by presenting in detail various research methods, including observational case studies, case-based and sample-based experiments and technical action research. These main sections are complemented by two generic checklists, one for the design cycle and one for the empirical cycle. The book is written for students as well as

academic and industrial researchers in software engineering or information systems. It provides guidelines on how to effectively structure research goals, how to analyze research problems concerning design goals and knowledge questions, how to validate artifact designs and how to empirically investigate artifacts in context – and finally how to present the results of the design cycle as a whole.

Developing Intelligent Agent Systems Lin

Padgham, Michael Winikoff, 2005-06-24 Build your own intelligent agent system... Intelligent agent technology is a tool of modern computer science that can be used to engineer complex computer programmes that behave rationally in dynamic and changing environments. Applications range from small programmes that intelligently search the Web buying and selling goods via electronic commerce, to autonomous space probes. This powerful technology is not widely used, however, as developing intelligent agent software requires high levels of training and skill. The authors of this book have developed and tested a methodology and tools for developing intelligent agent systems. With this methodology (Prometheus) developers can start agent-oriented designs and implementations easily from scratch saving valuable time and resources. Developing Intelligent Agent Systems not only answers the questions “what are agents?” and “why are they useful?” but also the crucial question: “how do I design and build intelligent agent systems?” The book covers everything a practitioner needs to know to begin to effectively use this technology -

including an introduction to the notion of agents, a description of the concepts involved, and a software engineering methodology. Read on for: a practical step-by-step introduction to designing and building intelligent agent systems. a full life-cycle methodology for developing intelligent agent systems covering specification, analysis, design and implementation of agents. PDT: Prometheus Design Tool – software support for the Prometheus design process. the example of an electronic bookstore to illustrate the design process throughout the book. Electronic resources including the Prometheus Design Tool (PDT), can be found at:

<http://www.cs.rmit.edu.au/agents/prometheus> This book is aimed at industrial software developers, software engineers and at advanced undergraduate students. It assumes knowledge of basic software engineering but does not require knowledge of Artificial Intelligence or of mathematics. Familiarity with Java will help in reading the examples in chapter 10.

Web Engineering Maxim Bakaev,Flavius Frasinca,In-Young Ko,2019-04-25 This book constitutes the refereed proceedings of the 19th International Conference on Web Engineering, ICWE 2019, held in Daejeon, South Korea, in June 2019. The 26 full research papers and 9 short papers presented were carefully reviewed and selected from 106 submissions. Additionally, two demonstrations, four posters, and four contributions to the PhD symposium as well as five tutorials are included in this volume. The papers cover research areas such as Web mining and

knowledge extraction, Web big data and Web data analytics, social Web applications and crowdsourcing, Web user interfaces, Web security and privacy, Web programming, Web services and computing, Semantic Web and linked open data applications, and Web application modeling and engineering.

Emergent Web Intelligence: Advanced Semantic Technologies Youakim Badr, Richard Chbeir, Ajith Abraham, Aboul-Ella Hassanien, 2010-06-17 The success of the World Wide Web depends on the ability of users to store, process and retrieve digital information regardless of distance boundaries, languages and domains of knowledge. The universality and flexibility of the World Wide Web have also enabled the rapid growth of a variety of new services and applications based on human-machine interaction. The semantics of exchanged information and services should be useful not only for human to human communications, but also in that machines would be able to understand and automatically process web content. Semantics give well-defined meaning to web content and enable computers and people to work in cooperation. Today, the crucial challenge becomes the development of languages to express information in a machine processable format. Now more than ever, new advanced techniques and intelligent approaches are required to transform the Web into a universal reasoning and computing machine. Web intelligence attempts to deal with this challenge by exploiting information technologies and artificial intelligence approaches to design the next generation of web-empowered systems and services.

Dependency Parsing Sandra Kubler, Ryan McDonald, Joakim Nivre, 2009-01-08 Dependency-based methods for syntactic parsing have become increasingly popular in natural language processing in recent years. This book gives a thorough introduction to the methods that are most widely used today. After an introduction to dependency grammar and dependency parsing, followed by a formal characterization of the dependency parsing problem, the book surveys the three major classes of parsing models that are in current use: transition-based, graph-based, and

grammar-based models. It continues with a chapter on evaluation and one on the comparison of different methods, and it closes with a few words on current trends and future prospects of dependency parsing. The book presupposes a knowledge of basic concepts in linguistics and computer science, as well as some knowledge of parsing methods for constituency-based representations. Social Networks and the Semantic Web Peter Mika, 2007-10-23 Social Networks and the Semantic Web offers valuable information to practitioners developing social-semantic software for the Web. It provides two major case studies. The first case study shows the possibilities of tracking a research community over the Web. It reveals how social network mining from the web plays an important role for obtaining large scale, dynamic network data beyond the possibilities of survey methods. The second case study highlights the role of the social context in user-generated classifications in content, such as the tagging systems known as folksonomies.
