**Nonlinear Resonances** Shanmuganathan Rajasekar,Miguel A. F. Sanjuan,2015-11-30 This introductory text presents the basic aspects and most important features of various types of resonances and anti-resonances in dynamical systems. In particular, for each resonance, it covers the theoretical concepts, illustrates them with case studies, and reviews the available information on mechanisms, characterization, numerical simulations, experimental realizations, possible quantum analogues, applications and significant advances made over the years. Resonances are one of the most fundamental phenomena exhibited by nonlinear systems and refer to specific realizations of maximum response of a system due to the ability of that system to store and transfer energy received from an external forcing source. Resonances are of particular importance in physical, engineering and biological systems - they can prove to be advantageous in many applications, while leading to instability and even disasters in others. The book is self-contained, providing the details of mathematical derivations and techniques involved in numerical simulations. Though primarily intended for graduate students, it can also be considered a reference book for any researcher interested in the dynamics of resonant phenomena.

**Structures of Grace** Kevin Ahern ,2015-03-01

The Search for Justice Kumari Jayawardena, Kishali Pinto-Jayawardena, 2016-11-21 The Sexual Violence and Impunity in South Asia research project (coordinated by Zubaan and supported by the International Development Research Centre) brings together, for the first time in the region, a vast body of knowledge on this important - yet silenced - subject. Six country volumes (one each on Bangladesh, Nepal, Pakistan, Sri Lanka, and two on India, as well as two standalone volumes) comprising over fifty research papers and two book-length studies, detail the histories of sexual violence and look at the systemic, institutional, societal, individual and community structures that work together to perpetuate impunity for perpetrators. The essays in this volume examine history and contemporary politics to understand the root causes of sexual violence in Sri Lanka. They look at the polarization created around ethnic and linguistic identities during the three-decades of ethnic conflict, but also scrutinize the routine violence of communities towards their own women in daily life. The authors argue that in this transitional post-war phase, Sri Lankan women must not only be treated as victims, but as agents of change. The writers highlight a hitherto unaddressed aspect of sexual violence: that of the structures that enable impunity on the part of perpetrators, be they security personnel and paramilitary forces, members of armed rebel groups, gangs, local politicians and police or ordinary citizens including close family members. They demonstrate how impunity for perpetrators is both a failure of the formal justice process and a product of individual, community and social conditions and indeed the choices that victims and families make that promote silence over truth. At the end of more than a quarter century of conflict that has left some 100,000 dead, 50,000 women-headed households struggling to survive, as well as countless victims and survivors of sexual violence, the calls for justice can no longer be ignored.

*Emulsion-based Encapsulation of Antioxidants* M. Ali Aboudzadeh, 2021-02-22 The limited aqueous solubility of bioactive

pharmaceutical ingredients presents a tremendous challenge in the development of new drugs. In recent years, methods have been developed to protect these sensitive bioactive compounds, namely antioxidants, with the aim of increasing the public sanitation grades. Emulsion-based systems are particularly interesting as colloidal delivery encapsulation systems, because they can easily be created from food-grade ingredients using relatively simple processing protocols. It is one of the most favorable delivery systems to increase the solubility of phytochemicals, nutraceuticals and food additives. *Emulsion-based Encapsulation of Antioxidants: Design and Performance* advances the field of colloid science through the investigation of the effects of formulation and process parameters that influence emulsion production. The book offers a deeper comprehension of the technological and biological aspects of the incorporation of encapsulated compounds in food matrices and explication of their activity. Chapters provide an overview of the status of emulsion-based formulations to encapsulate antioxidants, fabrication, properties, applications, and biological fate with emphasis on systems suitable for utilization within industry. Special emphasis is placed on the antioxidant activity of the carriers being the key advantage of these emulsion-based systems. The main aim of the book is to inspire and to guide fellow scientists and students in this field. Filled with illustrations, figures, case studies, practical examples, and historical perspectives, the book can also be used as a practical handbook or graduate textbook. For industry professionals, the book presents easy-to-achieve approaches to industrial pharmaceutical production.
