Photocatalytic Hydrogen Evolution Misook Kang,Vignesh Kumaravel,2020-06-17 Energy crises and global warming pose serious challenges to researchers in their attempt to develop a sustainable society for the future. Solar energy conversion is a remarkable, clean, and sustainable way to nullify the effects of fossil fuels. The findings of photocatalytic hydrogen production (PCHP) by Fujishima and Honda propose that “water will be the coal for the future”. Hydrogen is a carbon-free clean fuel with a high specific energy of combustion. Titanium oxide (TiO₂), graphitic-carbon nitride (g-C₃N₄) and cadmium sulfide (CdS) are three pillars of water splitting photocatalysts owing to their superior electronic and optical properties. Tremendous research efforts have been made in recent years to fabricate visible or solar-light, active photocatalysts. The significant features of various oxide, sulfide, and carbon based photocatalysts for cost-effective hydrogen production are presented in this Special Issue. The insights of sacrificial agents on the hydrogen production efficiency of catalysts are also presented in this issue.

Sustainable Agriculture Reviews 33 Eric Lichtfouse,2018-12-04 This book presents advanced knowledge on the relationships between climate change and agriculture, and various adaptation techniques such as low tillage, salt-adapted beneficial microbes and closed systems. Climate change is unavoidable but adaptation is possible. Climate change and agriculture are interrelated processes, both of which take place on a global scale. Climate change affects agriculture through changes in average temperatures, rainfall and climate extremes; changes in pests and diseases; changes in atmospheric carbon dioxide; changes in the nutritional quality of some foods; and changes in sea level.

Global Ecology and Oceanography of Harmful Algal Blooms Patricia M. Glibert,Elisa Berdalet,Michele A. Burford,Grant C. Pitcher,Mingjiang Zhou,2018-04-26 Harmful algal blooms (HABs) - blooms that cause

fish kills, contaminate seafood with toxins, or cause human or ecological health impacts and harm to local economies - are occurring more often, in more places and lasting longer than in past decades. This expansion is primarily the result of human activities, through increased nutrient inputs and various aspects of climate change. The Global Ecology and Oceanography of Harmful Algal Blooms (GEOHAB) programme promoted international collaboration to understand HAB population dynamics in various oceanographic regimes and to improve the prediction of HABs. This volume introduces readers to the overarching framework of the GEOHAB programme, factors contributing to the global expansion of harmful algal blooms, the complexities of HABs in different habitats, and the forward-looking issues to be tackled by the next generation of GEOHAB, GlobalHAB. The programme brought together an international team of contributing scientists and ecosystem managers, and its outcomes will greatly benefit the international research community.

Phytoplankton Pigments Suzanne Roy, Carole A. Llewellyn, Einar Skarstad Egeland, Geir Johnsen, 2011-10-27 Pigments act as tracers to elucidate the fate of phytoplankton in the world's oceans and are often associated with important biogeochemical cycles related to carbon dynamics in the oceans. They are increasingly used in in situ and remote-sensing applications, detecting algal biomass and major taxa through changes in water colour. This book is a follow-up to the 1997 volume *Phytoplankton Pigments in Oceanography* (UNESCO Press). Since then, there have been many advances concerning phytoplankton pigments. This book includes recent discoveries on several new algal classes particularly for the picoplankton, and on new pigments. It also includes many advances in methodologies, including liquid chromatography-mass spectrometry (LC-MS) and developments and updates on the mathematical methods used to exploit pigment information and extract the composition of phytoplankton communities. The book is invaluable primarily as a reference for students, researchers and professionals in aquatic science, biogeochemistry and remote sensing.

Microplastic Contamination in Aquatic Environments Eddy Y Zeng, 2023-11-10 This second edition of *Microplastic Contamination in Aquatic Environments: An Emerging Matter of Environmental Urgency* presents 14 chapters, through which a team of global, expert contributors cover a full range of microplastic research. The first chapter describes the general patterns for sources, occurrence, and transport of microplastics to lead off the book. The next batch of chapters covers sampling analytical methods for quantifying microplastics in the environment, followed by chapters addressing the association of chemicals with microplastics. A large cluster of chapters focus on the fate and transport of microplastics in wastewater treatment plants, freshwater systems, marine environment, terrestrial settings, and riverine runoff that connects terrestrial and marine systems. The next few chapters examine biotransport and effects of microplastics in organisms. The last two chapters are dedicated to two emerging research areas: nanoplastics in the environment and management strategies for global plastic pollution. Outlooks for future research to better understand the situation and further improvements of microplastic research are also covered. In the 6 years since the previous edition published, this fast-moving area has evolved, and the contents of this revision reflect that. There are numerous brand-new chapters, chapters that have been revised, and chapters that have been completely refocused. This book provides an overview of microplastics research. It is a guide for researchers to better understand the occurrence of microplastics. Ideally, this book provides

basic background knowledge of microplastics for oceanographers, ecologists, and climatologists. Provides an overview of the advantages and disadvantages of different methods for sampling, identification, and enumeration of microplastics. Contains contributions from world experts with a diverse range of backgrounds, all brought together by a well-known, experienced editor. Critical assessment of techniques employed for the sampling, size fractionation and characterisation of colloids and particles are given. Theoretical and experimental aspects of the methods as well as the required developments and possible recommendations are discussed. Each chapter gives a brief introduction general enough for the non-specialist. Written by a internationally recognized group of contributors.

Pharmacological Effects of Traditional Chinese Medicine on Cardiovascular Disease Jianxun

Liu, Guanhua Du, Xiu-Wei Yang, 2021-12-03 Cardiovascular diseases include ischemic and hemorrhagic diseases involving the heart, brain, whole body tissue, and includes coronary heart disease, heart failure, arrhythmia, atherosclerosis and stroke. This particular group of diseases continue to be a leading cause of death throughout the world with mortality rate remaining high. Currently, drugs administered orally and intravenously and surgical treatments are used to treat such diseases. Traditional Chinese medicine (TCM) refers to natural herbal medicines and their processed products used for preventing and treating disease under the guidance of traditional Chinese medicine's theory. The implementation of prevention and treatment programs of ischemic cardiovascular diseases with the use of TCM have been associated with positive outcomes; in terms of a reduction in the disability and mortality rate of some patients. Other studies have also shown that specific multi-component TCM preparations have therapeutic benefits based on multi-target and multi-pathway mechanisms, which may have advantages over the current single-component and single-target therapy. Based these characteristics, approved pharmaceutical drugs based in TCM, such as Compound Danshen Dripping Pills, Naoxintong Capsules, Tonxinluo Capsules, and Danhong Injection, are currently used to treat cardiovascular diseases. However, there are a number of areas that still need further investigation. For example, the identification of effective components in herbal medicine is essential in furthering our understanding of what occurs at a pharmacological level; the metabolizing pharmacological pathways of such components; the cellular target of the components; and the lack of standardized guidelines to enhance clinical research.

Seagrasses of Australia Anthony W. D. Larkum, Gary A. Kendrick, Peter J. Ralph, 2018-07-27 This book takes the place of "Biology of Seagrasses: A Treatise on the Biology of Seagrasses with Special Reference to the Australian Region", co-edited by A.W.D. Larkum, A.J. MaCComb and S.A. Shepherd and published by Elsevier in 1989. The first book has been influential, but it is now 25 years since it was published and seagrass studies have progressed and developed considerably since then. The design of the current book

follows in the steps of the first book. There are chapters on taxonomy, floral biology, biogeography and regional studies. The regional studies emphasize the importance of Australia having over half of the world's 62 species, including some ten species published for Australia since the previous book. There are a number of chapters on ecology and biogeography; fish biology and fisheries and dugong biology are prominent chapters. Physiological aspects again play an important part, including new knowledge on the role of hydrogen sulphide in sediments and on photosynthetic processes. Climate change, pollution and environmental degradation this time gain an even more important part of the book. Decline of seagrasses around Australia are also discussed in detail in several chapters. Since the first book was published two new areas have received special attention: blue carbon and genomic studies. Seagrasses are now known to be a very important player in the formation of blue carbon, i.e. carbon that has a long turnover time in soils and sediments. Alongside salt marshes and mangroves, seagrasses are now recognized as playing a very important role in the formation of blue carbon. And because Australia has such an abundance and variety of seagrasses, their role in blue carbon production and turnover is of great importance. The first whole genomes of seagrasses are now available and Australia has played an important role here. It appears that seagrasses have several different suites of genes as compared with other (land) plants and even in comparison with freshwater hydrophytes. This difference is leading to important molecular biological studies where the new knowledge will be important to the understanding and conservation of seagrass ecosystems in Australia. Thus by reason of its natural abundance of diverse seagrasses and a sophisticated seagrass research community in Australia it is possible to produce a book which will be attractive to marine biologists, coastal scientists and conservationists from many countries around the world.

Cotton Production and Uses Shakeel Ahmad, Mirza Hasanuzzaman, 2020-03-05 This book provides a comprehensive and systematic overview of the recent developments in cotton production and processing, including a number of genetic approaches, such as GM cotton for pest resistance, which have been hotly debated in recent decades. In the era of climate change, cotton is facing diverse abiotic stresses such as salinity, drought, toxic metals and environmental pollutants. As such, scientists are developing stress-tolerant cultivars using agronomic, genetic and molecular approaches. Gathering papers on these developments, this timely book is a valuable resource for a wide audience, including plant scientists, agronomists, soil scientists, botanists, environmental scientists and extension workers.
