**Didactics of Smart Pedagogy** Linda Daniela,2018-11-27

The focus on smart education has become a new trend in the global educational field. Some countries have already developed smart education systems and there is increasing pressure coming from business and tech communities to continue this development. Simultaneously, there are only fragmented studies on the didactic aspects of technology usage. Thus, pedagogy as a science must engage in a new research direction—smart pedagogy. This book seeks to engage in a new research direction, that of smart pedagogy. It launches discussions on how to use all sorts of smart education solutions in the context of existing learning theories and on how to apply innovative solutions in order to reduce the marginalization of groups in educational contexts. It also explores transformations of pedagogical science, the role of the educator, applicable teaching methods, learning outcomes, and research and assessment of acquired knowledge in an effort to make the smart education process meaningful to a wide audience of international educators, researchers, and administrators working within and tangential to TEL.

*ATEE Spring Conference 2020-2021* Maria Ranieri,Laura Menichetti,Stefano Cuomo,Davide Parmigiani,Marta Pellegrini,2021-10-18 This book collects some of the works presented at ATEE Florence Spring Conference 2020-2021. The Conference, originally planned for May 2020, was forcefully postponed due to the dramatic insurgence of the pandemic. Despite the difficulties in this period, the Organising Committee decided anyway to keep it, although online and more than one year later, not to disperse the huge work of authors, mainly teachers, who had to face one of the hardest challenges in the last decades, in a historic period where the promotion of social justice and equal opportunities - through digital technologies and beyond - is a key factor for democratic citizenship in our

societies. The Organising Committee, the University of Florence, and ATEE wish to warmly thank all the authors for their commitment and understanding, which ensured the success of the Conference. We hope this book could be, not only a witness of these pandemic times, but a hopeful sign for an equal and inclusive education in all countries.

*Atomic and Molecular Scattering* Berni Alder, 2012-12-02  
Methods in Computational Physics, Volume 10: Atomic and Molecular Scattering presents the digital methods used in producing quantitative results from the theory of atomic and molecular scattering. This volume contains seven chapters that specifically consider the methods that produce quantum mechanical wavefunctions from which cross sections are deduced. Chapter 1 covers the solutions of the systems of coupled integro-differential equations using the Hartree and Hartree-Fock methods for atomic structure calculations and the eigenfunction expansion method for electron-atom collision calculations. Chapter 2 treats the translation of the formal results into a generally applicable, efficient, and numerically stable method for solving quantum-mechanical scattering problems. Chapter 3 discusses the exponential method of solution as applied in inelastic scattering, the reaction coordinates for a collinear reactive system, and the modifications of the computational method required for reactive scattering. Chapter 4 outlines the theory and the calculational techniques involved in the use of algebraic expansions in scattering problems, while Chapter 5 deals with the solution of the close-coupled equations. Chapter 6 evaluates the collision between two quantum-mechanical systems with internal structure using the quantum-mechanical operator equations. Lastly, Chapter 7 focuses on the principles and applications of classical trajectory methods.

*Mobile Learning and Mathematics* Helen Crompton, John Traxler, 2015-02-11  
Mobile Learning and Mathematics provides an overview of current research on how mobile devices are

supporting mathematics educators in classrooms across the globe. Through nine case studies, chapter authors investigate the use of mobile technologies over a range of grade levels and mathematical topics, while connecting chapters provide a strong foundational background in mobile learning theories, instructional design, and learner support. For current educators, *Mobile Learning and Mathematics* provides concrete ideas and strategies for integrating mobile learning into their mathematics instruction—for example, by sharing resources that will help implement Common Core State Standards, or by streamlining the process of selecting from the competing and often confusing technology options currently available. A cutting edge research volume, this collection also provides a springboard for educational researchers to conduct further study.

**Insect Endocrinology** Lawrence I. Gilbert, 2011-07-26 The publication of the extensive seven-volume work *Comprehensive Molecular Insect Science* provided a complete reference encompassing important developments and achievements in modern insect science. One of the most swiftly moving areas in entomological and comparative research is endocrinology, and this volume, *Insect Endocrinology*, is designed for those who desire a comprehensive yet concise work on important aspects of this topic. Because this area has moved quickly since the original publication, articles in this new volume are revised, highlighting developments in the related area since its original publication. *Insect Endocrinology* covers the mechanism of action of insect hormones during growth and metamorphosis as well as the role of insect hormones in reproduction, diapause and the regulation of metabolism. Contents include articles on the juvenile hormones,

circadian organization of the endocrine system, ecdysteroid chemistry and biochemistry, as well as new chapters on insulin-like peptides and the peptide hormone Bursicon. This volume will be of great value to senior investigators, graduate students, post-doctoral fellows and advanced undergraduate research students. It can also be used as a reference for graduate courses and seminars on the topic. Chapters will also be valuable to the applied biologist or entomologist, providing the requisite understanding necessary for probing the more applied research areas. Articles selected by the known and respected editor-in-chief of the original major reference work, *Comprehensive Molecular Insect Science* Newly revised contributions bring together the latest research in the quickly moving field of insect endocrinology Review of the literature of the past five years is now included, as well as full use of data arising from the application of molecular technologies wherever appropriate

The Evolution of Religion, Religiosity and Theology Jay R.

Feierman,Lluis Oviedo,2019-09-11 This book takes a multi-dimensional and multi-disciplinary approach to religion, religiosity and theology from their earliest beginnings to the present day. It uniquely brings together the natural sciences and theology to explore how religious practice emerged and developed through the four sections into which the book is organized: Evolutionary biology; Philosophical linguistics, psychology and neuroscience; Theology and Anthropology. The volume features an international panel of contributors who develop an innovative picture of religion as a culturally-created social institution; religiosity as a more personal and subjective anthropological element of people expressed through religion; and theology as the study of god. To survive in changing times, living systems — a good characterization of religion, religiosity and theology — all must adaptively evolve. This is a vital study of a rapidly burgeoning field. As such, it will be of great interest to

scholars in religious studies and theology as well as in the psychological, sociological, and anthropological study of religion.

Mechanisms of Life History Evolution Thomas Flatt, Andreas Heyland, 2011-05-12 Life history theory seeks to explain the evolution of the major features of life cycles by analyzing the ecological factors that shape age-specific schedules of growth, reproduction, and survival and by investigating the trade-offs that constrain the evolution of these traits. Although life history theory has made enormous progress in explaining the diversity of life history strategies among species, it traditionally ignores the underlying proximate mechanisms. This novel book argues that many fundamental problems in life history evolution, including the nature of trade-offs, can only be fully resolved if we begin to integrate information on developmental, physiological, and genetic mechanisms into the classical life history framework. Each chapter is written by an established or up-and-coming leader in their respective field; they not only represent the state of the art but also offer fresh perspectives for future research. The text is divided into 7 sections that cover basic concepts (Part 1), the mechanisms that affect different parts of the life cycle (growth, development, and maturation; reproduction; and aging and somatic maintenance) (Parts 2-4), life history plasticity (Part 5), life history integration and trade-offs (Part 6), and concludes with a synthesis chapter written by a prominent leader in the field and an editorial postscript (Part 7).

*Curriculum Change within Policy and Practice* Damian Murchan, Keith Johnston, 2021-01-04 This book explores how curriculum reform is interconnected with policy, practice and society. Curriculum reform is increasingly associated with efforts to better the lives of citizens and provide a competitive edge to national prosperity. Educational policy and practice have been the subject of unprecedented convergence worldwide in the quest for so-called 21st century skills. This book offers a case study of curriculum reform within the Republic of Ireland, focusing on

antecedents, processes and outcomes of government efforts to evoke fundamental curriculum realignment at lower secondary level. Set against a backdrop of fluctuating economic fortunes and concerns about academic standards and educational equity, this volume has wider relevance beyond Ireland for any system undertaking education reform at scale.

*The Effect of Several Configuration Interaction Target States on the Elastic Scattering of Low-energy Electrons by Complex Atoms* Ed R. Smith, 1975 The total wave function (target plus incident electron) is represented by a close coupling expansion. For complex atoms such as atomic helium and oxygen, the effects of configuration interaction target states are discussed and analyzed, in part. For atomic helium, the doublet S partial-wave elastic cross section obtained using a He configuration interaction ground state is virtually identical with the corresponding cross section obtained using a Roothaan-Hartree-Fock ground state. In all cases studied, the elastic phase shift is shown to increase with the addition of atomic states and explicit correlation states into the expansion for the total wave function. For atomic oxygen, the quartet P partial-wave elastic phase shift can increase to such an extent as to introduce a 'resonance' behavior into the low-energy part of the elastic cross section. Finally, a second procedure is discussed for including correlation states when CI target states are used in the close-coupling expansion.

*Computational Materials Engineering* Maciej Pietrzyk, Lukasz Madej, Lukasz Rauch, Danuta Szeliga, 2015-07-14 Computational Materials Engineering: Achieving High Accuracy and Efficiency in Metals Processing Simulations describes the most common computer modeling and simulation techniques used in metals processing, from so-called fast models to more advanced multiscale models, also evaluating possible methods for improving computational accuracy and efficiency. Beginning with a discussion of conventional fast models like internal variable

models for flow stress and microstructure evolution, the book moves on to advanced multiscale models, such as the CAFÉ method, which give insights into the phenomena occurring in materials in lower dimensional scales. The book then delves into the various methods that have been developed to deal with problems, including long computing times, lack of proof of the uniqueness of the solution, difficulties with convergence of numerical procedures, local minima in the objective function, and ill-posed problems. It then concludes with suggestions on how to improve accuracy and efficiency in computational materials modeling, and a best practices guide for selecting the best model for a particular application. Presents the numerical approaches for high-accuracy calculations Provides researchers with essential information on the methods capable of exact representation of microstructure morphology Helpful to those working on model classification, computing costs, heterogeneous hardware, modeling efficiency, numerical algorithms, metamodeling, sensitivity analysis, inverse method, clusters, heterogeneous architectures, grid environments, finite element, flow stress, internal variable method, microstructure evolution, and more Discusses several techniques to overcome modeling and simulation limitations, including distributed computing methods, (hyper) reduced-order-modeling techniques, regularization, statistical representation of material microstructure, and the Gaussian process Covers both software and hardware capabilities in the area of improved computer efficiency and reduction of computing time

#### Criminal Justice at the Crossroads William R.

Kelly, 2015-05-05 Over the past forty years, the criminal justice system in the United States has engaged in a very expensive policy failure, attempting to punish its way to public safety, with dismal results. So-called tough on crime policies have not only failed to effectively reduce crime, recidivism, and victimization but also created an incredibly inefficient system that routinely

fails the public, taxpayers, crime victims, criminal offenders, their families, and their communities. Strategies that focus on behavior change are much more productive and cost effective for reducing crime than punishment, and in this book, William R. Kelly discusses the policy, process, and funding innovations and priorities that the United States needs to effectively reduce crime, recidivism, victimization, and cost. He recommends proactive, evidence-based interventions to address criminogenic behavior; collaborative decision making from a variety of professions and disciplines; and a focus on innovative alternatives to incarceration, such as problem-solving courts and probation. Students, professionals, and policy makers alike will find in this comprehensive text a bracing discussion of how our criminal justice system became broken and the best strategies by which to fix it.

**The Causes and Consequences of Increasing Inequality**

Finis Welch,2001-06-15 Despite the economic boom of the 1990s, the gap between the wealthy and the poor in the United States is growing larger. While ample evidence exists to validate perceived trends in wage, income, and overall wealth disparity, there is little agreement on the causes of such inequality and what might be done to alleviate it. This volume draws together a panel of distinguished scholars who address these issues in terms comprehensible to noneconomists. Their findings are surprising, suggesting that factors such as trade imbalances, immigration rates, and differences in educational resources do not account for recent increases in the inequality of wealth and earnings. Rather, the contributors maintain that these discrepancies can be attributed to workplace demand for high-skilled labor. They also

insist that further research must examine the organization of industry in order to better understand the concurrent devaluation of manual labor. Addressing a topic that is of considerable public interest, this collection helps move the issue of increasing economic inequality in America to the center of the public policy arena.
