Heroes and Villains David R. Marples,2007-01-01 Certain to engender debate in the media, especially in Ukraine itself, as well as the academic community. Using a wide selection of newspapers, journals, monographs, and school textbooks from different regions of the country, the book examines the sensitive issue of the changing perspectives ? often shifting 180 degrees ? on several events discussed in the new narratives of the Stalin years published in the Ukraine since the late Gorbachev period until 2005. These events were pivotal to Ukrainian history in the 20th century, including the Famine of 1932?33 and Ukrainian insurgency during the war years. This latter period is particularly disputed, and analyzed with regard to the roles of the OUN (Organization of Ukrainian Nationalists) and the UPA (Ukrainian Insurgent Army) during and after the war. Were these organizations freedom fighters or collaborators? To what extent are they the architects of the modern independent state? This excellent book fills a longstanding void in literature on the politics of memory in Eastern Europe. Professor Marples has produced an innovative and courageous study of how postcommunist Ukraine is rewriting its Stalinist and wartime past by gradually but inconsistently substituting Soviet models with nationalist interpretations. Grounded in an attentive reading of Ukrainian scholarship and journalism from the last two decades, this book offers a balanced take on such sensitive issues as the Great Famine of 1932-33 and the role of the Ukrainian nationalist insurgents during World War II. Instead of taking sides in the passionate debates on these subjects, Marples analyzes the debates themselves as discursive sites where a new national history is being forged. Clearly written and well argued, this study will make a major impact both within and beyond academia. - Serhy Yekelchuk, University of Victoria

**Process Mining in Action** Lars Reinkemeyer,2020-03-14 This book describes process mining use cases and business impact along the value chain, from corporate to local applications, representing the state of the art in domain know-how. Providing a set of industrial case studies and best practices, it complements academic publications on the topic. Further the book reveals the challenges and failures in order to offer readers practical insights and guidance on how to avoid the pitfalls and ensure successful operational deployment. The book is divided into three parts: Part I provides an introduction to the topic from fundamental principles to key success factors, and an overview of operational use cases. As a holistic description of process mining in a business environment, this part is particularly useful for readers not yet familiar with the topic. Part II presents detailed use cases written by contributors from a variety of functions and industries. Lastly, Part III provides a brief overview of the future of process mining, both from academic and operational perspectives. Based on a solid academic foundation, process mining has received increasing interest from operational businesses, with many companies already reaping the benefits. As the first book to present an overview of successful industrial applications, it is of particular interest to professionals who want to learn more about the possibilities and opportunities this new technology offers. It is also a valuable resource for researchers looking for empirical results when considering requirements for enhancements and further developments.

Masters Theses in the Pure and Applied Sciences Wade H. Shafer,2012-12-06 Masters Theses in the Pure and Applied Sciences was first conceived, published, and disseminated by the Center for Information and Numerical Data Analysis and Synthesis (CINDAS) \* at Purdue University in 1957, starting its coverage of theses with the academic year 1955. Beginning with Volume 13, the printing and dissemination phases of the activity were transferred to University Microfilms/Xerox of Ann Arbor, Michigan, with the thought that such an arrangement would be more beneficial to the academic and general scientific and technical community. After five years of this joint undertaking we had concluded that it was in the interest of all concerned if the printing and distribution of the volumes were handled by an internal and broader dissemination. tional publishing house to assure improved service. Hence, starting with Volume 18, Masters Theses in the Pure and Applied Sciences has been disseminated on a worldwide basis by Plenum Publishing Corporation of New York, and in the same year the coverage was broadened to include Canadian universities. All back issues can also be ordered from Plenum. We have reported in Volume 30 (thesis year 1985) a total of 12,400 theses titles from 26 Canadian and 186 United States universities. We are sure that this broader base for these titles reported will greatly enhance the value of this important annual reference work.

The choice of food crop for a region is primarily determined by the conditions of climate and soil. Once labelled as orphan crops, millets and pseudo-cereals are now known as miracle grains due to their adaptation to harsh conditions and high nutritional quality. Small millets and pseudo-cereals are now seen to occupy special niches through their ability to adapt to challenging conditions. These crops have a comparative advantage in marginal lands where they withstand stress conditions and contribute to sustainable production. They also contribute to the diversity-richness and production stability of agro-ecosystems. Millets include sorghum, pearl millet, finger millet, foxtail millet, proso millet, barnyard millet, little millet and kodo millet while the other group which are not cereals but consumed as cereals and generally referred as pseudo-cereals comprises of grain amaranths, buckwheat and chenopods. Millets and Pseudo Cereals presents current information on the genetic architecture of important economic traits and the genomic resources for gene enabled breeding. This compilation contains information on the global status, available germplasm resources, nutritional value, breeding advancements, genomics applications and sustainability of agriculture through millets and pseudo-cereals cultivation. The Conficker worm infected its first computer in November 2008, and within a month had infiltrated 1.5 million computers in 195 countries. Banks, telecommunications companies, and critical government networks—including British Parliament and the French and German military—became infected almost instantaneously. No one had ever seen anything like it. By January 2009, the worm lay hidden in at least eight million computers, and the botnet of linked computers it had created was big enough that an attack might crash the world. In this “masterpiece” (The Philadelphia Inquirer), Mark Bowden expertly lays out a spellbinding tale of how hackers, researchers, millionaire Internet entrepreneurs, and computer security experts found themselves drawn into a battle between those determined to exploit the Internet and those committed to protecting it.
