Mobile Learning Norbert Pachler,Ben Bachmair,John Cook,2009-12-15 As with television and computers before it, today's mobile technology challenges educators to respond and ensure their work is relevant to students. What's changed is that this portable, cross-contextual way of engaging with the world is driving a more proactive approach to learning on the part of young people. The first full-length authored treatment of the relationship between the centrality of technological development in daily life and its potential as a means of education, *Mobile Learning* charts the rapid emergence of new forms of mass

communication and their potential for gathering, shaping, and analyzing information, studying their transformative capability and learning potential in the contexts of school and socio-cultural change. The focus is on mobile/cell phones, PDAs, and to a lesser extent gaming devices and music players, not as the next new thing but meaningfully integrated into education, without objectifying the devices or technology itself. And the book fully grounds readers by offering theoretical and conceptual models, an analytical framework for understanding the issues, recommendations for specialized resources, and practical examples of mobile learning in formal as well as informal educational settings, particularly with at-risk students. Among the topics covered: • Core issues in mobile learning • Mobile devices as educational resources • Socioeconomic approaches to mobile learning • Creating situations that promote mobile learning • Ubiquitous mobility and its implications for pedagogy • Bridging the digital divide at the policy level *Mobile Learning* is a groundbreaking volume, sure to stimulate both discussion and innovation among educational professionals interested in technology in the context of teaching and learning.

Work-based Mobile Learning Norbert Pachler, Christoph Pimmer, Judith Seipold, 2011 The increasing use of mobile devices in work contexts has the potential to alter our work and learning practices. This is particularly true for knowledge workers. In addressing the implications of this transformation the book offers a multi-faceted collection of different concepts and cases of mobile learning in work environments from international contexts. The contributions are centred on the question of how individual users and organisations can harness mobile devices for learning and education. The range of examples presented in this book demonstrates that mobile devices foster situated approaches to learning in and across work contexts. The book is targeted at both practitioners - trainers or managers in charge of in-company training - and researchers, who are interested in designing, implementing or evaluating work-based mobile learning.

Technology-Enhanced Learning Nicolas Balacheff, Sten Ludvigsen, Ton de Jong, Ard Lazonder, Sally Barnes, 2009-03-24 Technology-enhanced learning is a timely topic, the importance of which is recognized by educational researchers, practitioners, software designers, and policy makers. This volume presents and discusses current trends and issues in technology-enhanced learning from a European research and development perspective. This multifaceted and multidisciplinary topic is considered from four different viewpoints, each of which constitutes a separate section in the book. The sections include general as well as

domain-specific principles of learning that have been found to play a significant role in technology-enhanced environments, ways to shape the environment to optimize learners' interactions and learning, and specific technologies used by the environment to empower learners. An additional section discusses the work presented in the preceding sections from a computer science perspective and an implementation perspective. This book comes out of the work in Kaleidoscope: a European Network of Excellence in which over 1,000 people from more than 90 institutes across Europe participate. Kaleidoscope brings together researchers from diverse disciplines and cultures, through their collaboration and sharing of scientific outcomes, they are helping move the field of technology-enhanced learning forward.

Learning-Through-Touring Juliet Sprake,2012-03-26 Learning-through-Touring uncovers ways in which people interact with the built environment by exploring the spaces around, between and within buildings. The key idea embodied in the book is that learning through touring is haptic -the learner is a physical, cognitive and emotional participant in the process. It also develops the concept that tours, rather than being finished

products, are designed to evolve through user participation and over time. Part One of the book presents a series of analytical investigations into theories and practices of learning and touring that have then been developed to produce a set of conceptual methods for tour design. Projects that have tried and tested these methods are described in Part Two. Technologies that have been utilised as portable tools for learning-through-touring are illustrated both through historical and contemporary practices. In all of this, there is an underlying belief that what is formally presented to us by 'authorities' is open to self-discovery, questioning and independent enquiry. The book is particularly relevant for those seeking innovative ways to explore and engage with the built environment; mobile learning educators; learning departments in museums, galleries and historic buildings; organisations involved in 'bridging the gap' between architecture and public understanding and anyone who enjoys finding out new things about their environment.
