**Selected Papers of Kun Huang** Bang-fen Zhu, 2000  
Professor Kun Huang is widely known for his collaboration with Max Born in writing the classic monograph, *Dynamical Theory of Crystal Lattices*. During his years of active research, he has made important contributions to solid state physics. This collection of papers is selected at his own choice as representing his most influential works. Included is his work on the interaction of radiation field with polar lattices and the resulting coupled vibration modes (later known as polariton); the systematic development of his theory of radiative and nonradiative multiphonon transition processes associated with lattice relaxation; his early prediction of diffuse X-ray scattering due to crystal defects; and his research works on low-dimensional semiconductor structures, and more. Professor Huang has found by his experience that scientists interested in these papers often want to know more particulars underlying the research work (such as background, motivation and rationale involved). Thus he was led to write a commentary which is published alongside the papers.

Kun-mkhyen Pad-ma dKar-po's Amitayus Tradition of Vajrayana Buddhist Transformative Care

Bhikshuni Lozang Trinlae, 2017-12-19 The book opens fresh ground in Buddhist studies and practical theology by applying phenomenological research methods to empirically discern transformative aspects of contemplative experience using reports elicited directly from contemporary practitioners. The work portrays the experiences of performing Kun-mkyen Pad-ma dKar-po's 16th c. ritual in a practice tradition attributed to the 12th c. female Indian teacher Siddharajāñi. Preliminary spiritual care and contemplative factor models are presented along with a detailed theoretical process analysis of positive spiritual development as a method of ã?ã?spiritual care through the contemplative action of the liturgy. Bhikshuni Lozang Trinlae is a fully ordained Buddhist monastic, contemplative, practical theologian, and chaplain.
