Czech Democracy in Crisis Astrid Lorenz, Hana Formánková, 2020-04-13 Democracy theories and comparative political science have been challenged within the last decade by an unexpected democratic deficit and the rise of populism in the new EU-member states. This volume written by German and Czech scholars gives some food for thought for solving these research problems by means of thorough analyses of the polity, the politics and selected policies of the Czech Republic since 1990. Dieter Segert, retired Professor of Political Science (Area Studies on Eastern Europe), University of Vienna, Austria *Czech Democracy in Crisis* is a long-overdue comprehensive study of the Czech political system. Using institutional approaches to change, it explores crucial policy outcomes. A perfect book for academics and practitioners who want to understand the challenges of democratic consolidation in a new democracy. Lenka Bustikova, Associate Professor of Political Science, Arizona State University, USA, and author of *Extreme Reactions: Radical Right Mobilization in Eastern Europe* The image of the Czechs as a poster child of democratization has changed into a crisis narrative in recent years. This edited volume traces this change and examines the suitability of different theories to explain developments in Czech democracy. The contributors, all renowned experts in their fields, offer well-founded and compact insights into the post-1989 Czech political system. They cover political institutions and parties; civil society; the media; and selected policy areas such as foreign, economic, migration and regional policy. The book takes into account processes of democratization and Europeanization, explaining the political picture at various stages of development. Finding that many of today's problems—fragmented political parties, government instability, inefficient state administration and low quality of governance—have not been new developments but have constantly existed, the authors present a plea for theoretical adjustments that should be read by all academics, students, practitioners and readers with an interest in Czech politics and society.

Das politische System Tschechiens Astrid Lorenz, Hana Formánková, 2018-06-21 Das Buch gibt einen fundierten Einblick in das Regierungssystem Tschechiens, die Gesellschaft, Parteien und Medien sowie ausgewählte Politikfelder. Dabei konzentriert es sich auf zentrale Merkmale und ihren Zusammenhang mit der Europäischen Union, zeichnet wichtige Entwicklungslinien nach und ordnet die Befunde im Vergleich mit anderen Staaten ein. Die Autoren sind anerkannte Wissenschaftler/innen, die ein hohes Maß an fachlicher und regionaler Expertise mitbringen.

An Atlas of Agendas Brian Holmes, Freek Lomme, Bureau d'Études, 2014 Together, Paris-based artists Léonore Bonaccini and Xavier Fourt make up the artist duo Bureau d'Etudes. For the past several years, this French group has been producing cartographies of contemporary political, social and economic systems which allow people to empower and reposition themselves. Revealing what normally remains invisible, often in the shape of large-sized banners, and contextualizing apparently separate elements within another framework, these visualizations of people's interests and relations re-symbolize and actualize an order concealed and unknown.

Effects of Anthropogenic Noise on Animals Hans Slabbekoorn, Robert J. Dooling, Arthur N. Popper, Richard R. Fay, 2018-08-20 Over the past several years, many investigators interested in the effects of man-made sounds on animals have come to realize that there is much to gain from studying the broader literature on hearing sound and the effects of sound as well as data from the effects on humans. It has also become clear that knowledge of the effects of sound on one group of animals (e.g., birds or frogs) can guide studies on other groups (e.g., marine mammals or fishes) and that a review of all such studies together would be very useful to get a better understanding of the general principles and underlying cochlear and cognitive mechanisms that explain damage, disturbance, and deterrence across taxa. The purpose of this volume, then, is to provide a comprehensive review of the effects of man-made sounds on animals, with the goal of fulfilling two major needs. First, it was thought to be important to bring together data on sound and bioacoustics that have implications across all taxa (including humans) so that such information is generally available to the community of scholars interested in the effects of sound. This is done in Chaps. 2-5. Second, in Chaps. 6-10, the volume brings together what is known about the effects of sound on diverse vertebrate taxa so that investigators with interests in specific groups can learn from the data and experimental approaches from other species. Put another way, having an overview of the similarities and discrepancies among various animal groups and insight into the “how and why” will benefit the overall conceptual understanding, applications in society, and all future research.

From Public Service Broadcasting to Public Service Media Gregory Ferrell Lowe, Jo Bardoel, 2007 The core challenge facing public service broadcasting today is the transition to public service media. This understanding characterised discourse among participants in the RIPE@2006 conference in the Netherlands, the theme of which was Public Service Broadcasting in the Multimedia Environment: Programmes and Platforms. The contributors in this volume focus attention on issues of strategic concern and tactical importance in addressing the core challenge. A defining ... Etc.

Fish Hearing and Bioacoustics Joseph A. Sisneros, 2015-10-29 Fish Hearing and Bioacoustics is an anthology of review papers that were presented at a special symposium to honor Arthur Popper and Richard Fay on May 25th 2013 at the Mote Marine Laboratory in Sarasota, FL. The research presentations at this conference spanned the range of disciplines covered by Fay and Popper during their long and productive careers. The book includes the following thematic areas for the papers in this special volume: morphology and anatomy of the inner ear and lateral line systems; physiology of inner ear, lateral line, and central auditory systems; acoustically mediated behavior, including communication and sound localization; and environmental influences on fish hearing and bioacoustics, including anthropogenic effects of noise on fishes. Each chapter reviews and summarizes the past studies of particular area that will lead the reader up to the current work presented at the symposium. In addition, each chapters includes a perspective of how Arthur Popper and Richard Fay have influenced their particular area of fish bio acoustic research. Each manuscript also includes a hypotheses for future studies. These hypotheses will provide a springboard for future work in each field.

Free Energy Calculations Christophe Chipot, Andrew Pohorille, 2007-01-08 Free energy constitutes the most important thermodynamic quantity to understand how chemical species recognize each other, associate or react. Examples of problems in which knowledge of the underlying free energy behaviour is required, include conformational equilibria and molecular association, partitioning between immiscible liquids, receptor-drug interaction, protein-protein and protein-DNA association, and protein stability. This volume sets out to present a coherent and comprehensive account of the concepts that underlie different approaches devised for the determination of free energies. The reader will gain the necessary insight into the theoretical and computational foundations of the subject and will be presented with relevant applications from molecular-level modelling and simulations of chemical and biological systems. Both formally accurate and approximate methods are covered using both

classical and quantum mechanical descriptions. A central theme of the book is that the wide variety of free energy calculation techniques available today can be understood as different implementations of a few basic principles. The book is aimed at a broad readership of graduate students and researchers having a background in chemistry, physics, engineering and physical biology.

Swimming Physiology of Fish Arjan P. Palstra,Josep V. Planas,2012-08-30 In light of mounting fishing pressures, increased aquaculture production and a growing concern for fish well-being, improved knowledge on the swimming physiology of fish and its application to fisheries science and aquaculture is needed. This book presents recent investigations into some of the most extreme examples of swimming migrations in salmon, eels and tunas, integrating knowledge on their performance in the laboratory with that in their natural environment. For the first time, the application of swimming in aquaculture is explored by assessing the potential impacts and beneficial effects. The modified nutritional requirements of “athletic” fish are reviewed as well as the effects of exercise on muscle composition and meat quality using state-of-the-art techniques in genomics and proteomics. The last chapters introduce zebrafish as a novel exercise model and present the latest technologies for studying fish swimming and aquaculture applications.
