Language Engineering Hristo Georgiev, 2007-04-22 Language Engineering examines the processes involved in dictionary-making using computational linguistics, including tagging, parsing, spell-checking, lexical semantics and machine translation. The book examines dictionary-building in English, but also includes appendices applying natural language processing to French and German. This book is the first detailed description of syntax and semantics using the C(C++) programming language, and as such should be essential reading for researchers in natural language processing and computational linguistics.

English Algorithmic Grammar Hristo Georgiev, 2005-11-21 The ultimate goal of Computational Linguistics is to teach the computer to understand Natural Language. This research monograph presents a description of English according to algorithms which can be programmed into a computer to analyse natural language texts. The algorithmic approach uses series of instructions, written in Natural Language and organised in flow charts, with the aim of analysing certain aspects of the grammar of a sentence. One problem with text processing is the difficulty in distinguishing word forms that belong to parts of speech taken out of context. In order to solve this problem, Hristo Georgiev starts with the assumption that every word is either a verb or a non-verb. From here he presents an algorithm which allows the computer to recognise parts of speech which to a human would be obvious though the meaning of the words. Emphasis for a computer is placed on verbs, nouns, participles and adjectives. English Algorithmic Grammar presents information for computers to recognise tenses, syntax, parsing, reference, and clauses. The final chapters of the book examine the further applications of an algorithmic approach to English grammar, and suggests ways in which the computer can be programmed to recognise meaning. This is an innovative, cutting-edge approach to computational linguistics that will be essential reading for academics researching computational linguistics, machine translation and natural language processing.

Text, Speech and Dialogue Petr Sojka, Ivan Kopeček, Karel Pala, 2003-08-02 The Text, Speech and Dialogue (TSD) Conference 2002, it should be noticed, is now being held for the 7th time and we are pleased to observe that in its short history it has turned out to be an international forum successfully intertwining the basic fields of NLP. It is our strong hope that the conference contributes to a better understanding between researchers from the various areas and promotes more intensive mutual cooperation. So far the communication between man and computers has displayed a one-way nature, humans have to know how the machines work and only then can they "understand" them. The opposite, however, is still quite far from being real, our understanding of how our "user-friendly" computers can understand us humans is not deep enough yet. A lot of work has to be done both in the near and distant future. Let TSD 2002 be a modest contribution to this goal. The conference also serves well in its second purpose: to facilitate researchers meeting in the NLP field from Western and Eastern Europe. Moreover, many participants now come from other parts of the world, thus making TSD a real crossroads for researchers in the NLP area. This volume contains the proceedings of this conference held in Brno, September 9–12, 2002. We were honored to have as keynote speakers James Pustejovsky from Brandeis University, and Ronald Cole from the University of Colorado. We would like to thank all the Program Committee members and external reviewers for their conscientious and diligent reviewing work.

López, Carmen Lora Ochoa, Manuel Guerrero Martelo, Carmen Elisa Gómez Tobón, William Alejandro Giraldo Zuluaga, Esteban Arturo Chamorro, 2022-05-12 Los procesos de globalización e internacionalización de los mercados y las economías de los países han hecho que la sociedad global internacional comprenda que el mundo del siglo xxi está conformado por países ricos y pobres, esto es países desarrollados y países en desarrollo. La marcada diferencia entre los dos bloques económicos fue la pregunta que se hicieron los unos y los otros. La respuesta a la pregunta se mostró más allá de la lectura literal de los textos, en la lectura abductiva de la dinámica de los contextos históricos globales del desarrollo económico, educativo, institucional, cultural, del capital social, como también de la ciencia, la tecnología y la innovación (ct&i) en cada país y región. Por una parte, estuvieron las realidades empíricas vividas de cada país, las cuales, mediante las experiencias económicas, sociales, culturales, tecnológicas e institucionales de las personas, quienes expresaron las vivencias en cada espacio y en cada época. Por otro lado, está la ciencia que, igualmente a través del tiempo, ha estado mostrando con el conocimiento y las evidencias científicas, las realidades de las diferencias entre países en desarrollo y países desarrollados. Ciertamente, la humanidad en los últimos dos siglos y medio ha tenido una dinámica tecnológica y de generación de conocimientos, sin precedentes en la historia. Dinámica propiciada por los saltos cuánticos de las últimas tres revoluciones industriales, en las cuales la producción de conocimiento favorecido por los niveles de educación de las personas ha generado volúmenes hipergeométrica de este. Hecho que ha llevado a un aceleramiento dinámico de las innovaciones tecnológicas, no pronosticado antes. El libro, en su conjunto, tomó como propósito realizar un análisis teórico, estadístico y económico de lo denominado en las últimas cuatro décadas por los países desarrollados como las nuevas fuentes de productividad en América Latina, en relación con la productividad y la competitividad. Las bases bibliográficas digitales de Scopus facilitaron la búsqueda de la literatura internacional, nacional y las bases de datos del Foro Económico Mundial, el Banco Mundial y Transparencia Internacional fueron la fuente de la información estadística. Los resultados presentaron el estado real de América Latina en las variables de capital humano, tecnologías de la información y la comunicación (tic), innovación e instituciones, como también el avance de la región en el tema de gestión del conocimiento. El libro concluyó mostrando los fuertes rezagos de América Latina en cuanto a la calidad en educación (capital humano), tic, innovación, con fallas de calidad en las instituciones extractivas y no inclusivas que pueden estar afectando la productividad y la competitividad de la región.
