Art Law Leonard D. DuBoff, Michael D. Murray, 2023-01-31 The purchase of this ebook edition does not entitle you to receive access to the Connected eBook on CasebookConnect. You will need to purchase a new print book to get access to the full experience including: lifetime access to the online ebook with highlight, annotation, and search capabilities, plus an outline tool and other helpful resources. *Art Law: Cases and Materials, Third Edition* is written by Leonard DuBoff, a founder of the discipline of art law, and by Michael Murray, a prolific scholar of art law and intellectual property law. The current edition focuses on law and the visual arts world that now embraces the disruptive forces of blockchains and non-fungible tokens (NFTs). Designed as a primary text for courses on art law, law and the visual arts, cultural property law, or cultural heritage law, the three-part framework of this highly readable casebook explores artists' rights under copyright, trademark, right of publicity, moral rights, and the First Amendment; art markets including the law of galleries, dealers, auctions, and museums; and the legal issues surrounding international preservation of art and cultural property, including smuggling and theft in peacetime, looting and plundering in wartime, and protection of native and indigenous peoples' art. New to the Third Edition: As stated by the author of the introduction, Jane Ginsburg of Columbia Law School says, "The tremendous sweep of this casebook takes in the manifold fields that the apparently simple name 'Art Law' implicates. From 'What is Art?' through the different kinds of intellectual property encompassed within artists' rights, through censorship and freedom of expression to the many permutations of the art market, and on to international and domestic protections of cultural property, the casebook enmeshes the student in an extraordinary variety of fascinating, and often intractable, legal issues. The current edition not only generally updates its predecessor but adds such cutting-edge digital matters as NFTs (which unsettle some notions of "what is art," and pervade the gamut of IP issues), the role of artificial intelligence in the creation of works of art, and the impact of deepfakes on the right of publicity." The Third Edition explores how NFTs and the market for digital art has changed how artists, collectors, and the general public view and interact with the art world. NFTs have disrupted the calculation of what is art and who is an artist and challenge the centuries old systems of valuation of art even though they apply the same basic factors of scarcity, provenance (authenticity), attribution to a particular artist, popularity, historical significance, and potential for growth in value. NFTs and metaverse have thrust an entirely new class of creators and content owners into a crypto community that disfavors law and champions copying. NFTs have made digital art a popular and expensive art investment, but this pushes to the forefront the uncomfortable uncertainties of how the law treats digital works under the copyright first sale doctrine. NFTs now enable American artists to list and sell art works linked to smart contracts that set a rate for the payment of resale royalties and can issue a royalty payment whenever these art works are resold on an exchange that supports the payment of royalties for transactions on the blockchain where the art is registered. The text also explores how deep fakes and AI rendering technologies have created new issues regarding unauthorized uses in false endorsement situations and lookalike avatars and profile pictures (PFPS). Professors and students will benefit from: A very current text covering the real world and metaverse art world of the 2020s A rich collection of illustrations from and about the cases and issues PowerPoints that cover each case, topic, and subtopic

Tietz Clinical Guide to Laboratory Tests - E-Book Alan H. B. Wu,2006-06-08 This new edition of Norbert Tietz's classic handbook presents information on common tests as well as rare and highly specialized tests and procedures - including a summary of the utility and merit of each test. Biological variables that may affect test results are discussed, and a focus is placed on reference ranges, diagnostic information, clinical interpretation of laboratory data, interferences, and specimen types. New and updated content has been added in all areas, with over 100 new tests added. Tests are divided into 8 main sections and arranged alphabetically. Each test includes necessary information such as test name (or disorder) and method, specimens and special requirements, reference ranges, chemical interferences and in vivo effects, kinetic values, diagnostic information, factors influencing drug disposition, and clinical comments and remarks. The most current and relevant tests are included; outdated tests have been eliminated. Test index (with extensive cross references) and disease index provide the reader with an easy way to find necessary information Four new sections in key areas (Preanalytical, Flow Cytometry, Pharmacogenomics, and Allergy) make this edition current and useful. New editor Alan Wu, who specializes in Clinical Chemistry and Toxicology, brings a wealth of experience and expertise to this edition. The Molecular Diagnostics section has been greatly expanded due to the increased prevalence of new molecular techniques being used in laboratories. References are now found after each test, rather than at the end of each section, for easier access.
