A current state analysis of their digital counterparts helps in the prediction of the future of physical assets. Organizations obtain better insights on their product performance through the implementation of Digital Twins, and the applications of the technology are frequently in sectors such as manufacturing, automobile, retail, health care, smart cities, industrial IoT, etc. This book explores the latest developments and covers the significant challenges, issues, and advances in Digital Twin Technology. It will be an essential resource for anybody involved in related industries, as well as anybody interested in learning more about this nascent technology. This book includes:

The future, present, and past of Digital Twin Technology. Digital twin technologies across the Internet of Drones, which developed various perceptive and autonomous capabilities, towards different control strategies such as object detection, navigation, security, collision avoidance, and backup. These approaches help to deal with the expansive growth of big data solutions. The recent digital twin concept in agriculture, which offers the vertical framing by IoT installation development to enhance the problematic food supply situation. It also allows for significant energy savings practices. It is highly required to overcome those challenges in developing advanced imaging methods of disease detection & prediction to achieve more accuracy in large land areas of crops. The welfare of upcoming archetypes such as digitalization in forensic analysis. The ideas of digital twin have arisen to style the corporeal entity and associated facts reachable software and customers over digital platforms. Wind catchers as earth building: Digital Twins vs. green sustainable architecture.

Exploring and Explaining Diversity in Agricultural Technology Annelou van Gijn,John Whittaker,Patricia C. Anderson,2014-08-29 This volume is the outcome of collaborative European research among archaeologists, archaeobotanists, ethnographers, historians and agronomists, and frequently uses experiments in archaeology. It aims to establish new common ground for integrating different approaches and for viewing agriculture from the standpoint of the human actors involved. Each chapter provides an interdisciplinary overview of the skills used and the social context of the pursuit of agriculture, highlighting examples of tools, technologies and processes from land clearance to cereal processing and food preparation. Engineering Vision Technology Revolution & Optimism Purnendu Ghosh,2020-06-18 We live in the world where nothing is difficult, if there is market. There is therefore the dilemma of want and need. Technology wants, what life wants. Using technologies, it seems, it is possible to do anything and produce anything. The centre of gravity of engineering profession is shifting. The world wants confident engineers who can foresee and manage the unknown and unexpected problems. Engineers are expected to understand global issues, and the nuances of working in a culturally diverse space. They are expected to appreciate, more than before, the human dimensions of emerging technologies. There are many questions, such as - Do I take pride in designing a thing and manufacturing it, as I take pride in packaging it? Are we cultivating the right kind of engineering mindset? What a general engineering toolkit must contain? Are there enough challenging jobs in the manufacturing industry to attract good engineers? Is it right to allow the creation of future elites who have augmented themselves with artificial intelligence and genetic engineering, without inventing a way to manage their superhuman abilities? Can there be better engineering than life itself? Should we be optimistic about the future of technology? Are we working harder than we are required to work? Can technology improve work-life balance? Is the society ready to accept the exponential development challenges? These, and many such issues are the concerns of science, engineering, technology and society. This book is an attempt to deliberate upon these issues for the welfare of humankind.

Technology and Innovation for Social Change Satyajit Majumdar,Samapti Guha,Nadiya Marakkath,2014-12-04 Tension exists between technologists and social thinkers because of the impact technology and innovation have on social values and norms, which is often viewed as damaging to the cultural fabric of a nation or society. Since the global business environment is the context in which implementation of technology and innovation takes place, it is widely accepted as the major reason for such conflicts. In this backdrop, this edited book integrates independent research from across the globe. It deals with the nature and significance of technology, innovation and social change as well as the relationships between them, and discusses the significance of social entrepreneurship from social innovation and technology perspectives. Research areas covered are related to the development and deployment of technology, innovation and knowledge in social

change, capabilities of institutions, models, role of government and corporate social responsibility and community involvement. Multiple aspects of social change are discussed in the context of India, Mexico, Thailand, Cambodia, Laos, Vietnam, Ethiopia, Nigeria and other African countries. But society does not silently accept technologically enforced changes; sometimes technology is seen as an enemy of inclusive growth and for many, economic development is an anti-thesis of social change. Selected case studies on sector-specific technologies, such as the use of genetically modified seeds in agriculture, which has impacted the market and society, are critically analyzed to develop insights into the adoption of technology and its impact. At the same time it examines policy related issues, without any bias in favor of, or against, a specific technology.

Information Technology Ramesh Chandra,2003-08 Many developing countries are in a good position to exploit the opportunities of the technology revolution and advance human development. The information and communication technologies provide new resources and material for expanding education. The net-based education can help access to lived experience, as well as dramatise and concretize basic historical facts and knowledge. In fact the second half of the twentieth century has witnessed the global phenomenon of an information explosion. The development of different electronic technologies has made it possible for millions of people to have fast access to huge information resources stored in different places on the planet, to communicate with each other and to handle information presented in several forms. Today computers and other electronic devices increasingly communicate and interact directly with other devices over a variety of networks such as the internet.
