Carefree Forensic Doctor Fang HenWan,2020-05-20 He had occasionally acquired the mysterious jade pendant, opened the Heaven's Eyes, learned medicine, trained profound arts, flipped over from a decaying man, became a supreme forensic doctor, and from then on, peeked at life and death, turned yin and yang, healed the bones of the dead, solved all kinds of difficult and complicated cases, was chased by the department flower, caused the female CEO to fall for it, and was even marked as the target of countless women ... From then on, he would indulge in leisure and live a happy life!

A Rising China and Security in East Asia Rex Li,2008-11-21 This volume provides a comprehensive and in-depth analysis of the security discourse of Chinese policy elites on the major powers in East Asia in relation to China's self-perception as a rising power. It is the first book-length study that utilizes International Relations theories systematically to analyze Chinese security perceptions of the United States, Japan and Russia, and the debate among Chinese international relations specialists on how China should respond to the perceived challenge from the major powers to its rise to a global status. Rex Li argues that the security discourse of Chinese policy analysts is closely linked to their conception of China's identity and their desire and endeavour to construct a great power identity for China. Drawing on extensive and up-to-date Chinese-language sources, the study demonstrates that Chinese elites perceive the power, aspirations and security strategies of other East Asian powers primarily in terms of their implications for China's pursuit of great power status. This new work will contribute significantly to the on-going academic and policy debate on the nature and repercussions of China's rise. This book will be essential reading for undergraduate and postgraduate students and scholars of Asian security, China's foreign relations, security studies and international relations.

The Theory of Toroidally Confined Plasmas Roscoe B White,2013-11-18 This graduate level textbook develops the theory of magnetically confined plasma, with the aim of bringing the reader to the level of current research in the field of thermonuclear fusion. It begins with the basic concepts of magnetic field description, plasma equilibria and stability, and goes on to derive the equations for guiding center particle motion in an equilibrium field. Topics include linear and nonlinear ideal and resistive modes and particle transport. It is of use to workers in the field of fusion both for its wide-ranging account of tokamak physics and as a kind of handbook or formulary. This edition has been extended in a number of ways. The material on mode-particle interactions has been reformulated and much new information added, including methodology for Monte Carlo implementation of mode destabilization. These results give explicit means of carrying out mode destabilization analysis, in particular for the dangerous fishbone mode. A new chapter on cyclotron motion in toroidal geometry has been added, with comparisons of the analysis of resonances using guiding center results. A new chapter on the use of lithium lined walls has been added, a promising means of lowering the complexity and cost of full scale fusion reactors. A section on nonlocal transport has been added, including an analysis of Levy flight simulations of ion transport in the reversed field pinch in Padova, RFX.

Knowledge and Systems Sciences Jian Chen, Van-Nam Huynh, Xijin Tang, Jiangning Wu, 2023-11-23 This book constitutes the proceedings of the 22nd International Symposium, KSS 2023, held in Guangzhou, China, during December 2–3, 2023. The 20 full papers included in this volume were carefully reviewed and selected from 56 submissions. The volume is divided in topical sections that cover the following topics: data mining and machine learning, complex systems modeling, decision analysis and knowledge management, opinion mining and knowledge technologies.

Intelligent Autonomous Systems 12 Sukhan Lee, Hyungsuck Cho, Kwang-Joon Yoon, Jangmyung Lee, 2012-11-02 Intelligent autonomous systems are emerged as a key enabler for the creation of a new paradigm of services to humankind, as seen by the recent advancement of autonomous cars licensed for driving in our streets, of unmanned aerial and underwater vehicles carrying out hazardous tasks on-site, and of space robots engaged in scientific as well as operational missions, to list only a few. This book aims at serving the researchers and practitioners in related fields with a timely dissemination of the recent progress on intelligent autonomous systems, based on a collection of papers presented at the 12th International Conference on Intelligent Autonomous Systems, held in Jeju, Korea, June 26-29, 2012. With the theme of "Intelligence and Autonomy for the Service to Humankind, the conference has covered such diverse areas as autonomous ground, aerial, and underwater vehicles, intelligent transportation systems, personal/domestic service robots, professional service robots for surgery/rehabilitation, rescue/security and space applications, and intelligent autonomous systems for manufacturing and healthcare. This volume 1 includes contributions devoted to Autonomous Ground Vehicles and Mobile Manipulators, as well as Unmanned Aerial and Underwater Vehicles and Bio-inspired Robotics.

Controversy and Construction in Contemporary Aesthetics ,2023-11-13 The inclusion of this volume in Brill's Transcultural Aesthetics, a book series devoted primarily to multidisciplinary Western and non-Western aesthetics, is indispensable to enrich the nature and scope of contemporary aesthetics. Time and again, many aesthetic controversies have not been adequately addressed, and this has become a common concern among scholars in contemporary aesthetics. This volume therefore seeks to contribute new perspectives to these controversies by shedding light on some of the fresh views among the leading theorists working in the field today.

Zibuyu, "What The Master Would Not Discuss", according to Yuan Mei (1716 - 1798): A Collection of Supernatural Stories (2 vols) Paolo Santangelo,2013-07-04 Zibuyu, a collection of supernatural stories, is a work with different reading levels, which allows to uncover several deep trends, taboos and fantasies of late imperial intellectual circles. With translation and commentary.

Study on the Consensus Salary System for Modern Enterprises Zhihong Li,2014-07-08 For firms, the salary issue is extremely important for their business operations and development. In order to investigate this issue and to expand the role of the salary system in business management, the book presents the Consensus Salary Model for modern enterprises and further explores its theoretical foundations, decisive mechanisms and features, and provides a basic framework for designing salary systems for modern enterprises. Finally, the book incorporates empirical research to test the model.

MEMS Accelerometers Mahmoud Rasras,Ibrahim (Abe) M. Elfadel,Ha Duong Ngo,2019-05-27 Micro-electro-mechanical system (MEMS) devices are widely used for inertia, pressure, and ultrasound sensing applications. Research on integrated MEMS technology has undergone extensive development driven by the requirements of a compact footprint, low cost, and increased functionality. Accelerometers are among the most widely used sensors implemented in MEMS technology. MEMS accelerometers are showing a growing presence in almost all industries ranging from automotive to medical. A traditional MEMS accelerometer employs a proof mass suspended to springs, which displaces in response to an external acceleration. A single proof mass can be used for one- or multi-axis sensing. A variety of transduction mechanisms have been used to detect the displacement. They include capacitive, piezoelectric, thermal, tunneling, and optical mechanisms. Capacitive accelerometers are widely used due to their DC measurement interface, thermal stability, reliability, and low cost. However, they are sensitive to electromagnetic field interferences and have poor performance for high-end applications (e.g., precise attitude control for the satellite). Over the past three decades, steady progress has been made in the area of optical accelerometers for high-performance and high-sensitivity applications but several challenges are still to be tackled by researchers and engineers to fully realize opto-mechanical accelerometers, such as chip-scale integration, scaling, low bandwidth, etc. This Special Issue on MEMS Accelerometers seeks to highlight research papers, short communications, and review articles that focus on: Novel designs, fabrication platforms, characterization, optimization, and modeling of MEMS accelerometers. Alternative transduction techniques with special emphasis on opto-mechanical sensing. Novel applications employing MEMS accelerometers for consumer electronics, industries, medicine, entertainment, navigation, etc. Multi-physics design tools and methodologies, including MEMS-electronics co-design. Novel accelerometer technologies and 9DoF IMU integration. Multi-accelerometer platforms and their data fusion.

Coastal Engineering 2002 Jane McKee Smith,2003 This book contains more than 300 papers presented at the 28th International Conference on Coastal Engineering, held in Cardiff, Wales, in July 2002. It is divided into five parts: coastal waves; nearshore currents, swash, and long waves; coastal structures; sediment transport; and coastal morphology, beach nourishment, and coastal management. The papers cover a broad range of

topics, including theory, numerical and physical modeling, field measurements, case studies, design, and management. Coastal Engineering 2002 provides engineers, scientists, and planners with state-of-the-art information on coastal engineering and coastal processes.

Peptides James P. Tam,Pravin T.P. Kaumaya,2006-04-11 The Fifteen American Peptide Symposium (15APS) was held in Nashville, Tennessee, on June 14-19, 1997. This biennial meeting was jointly sponsored by the American Peptide Society and Vanderbilt University. The attendance of 1,081 participants from 37 countries was lower than the two previously held Symposia. However, the number of participating countries was the largest. Thus, it was gratifying to see that this meeting retained both its international flavor and participant loyalty at a time when there are many more symposia held each year on similar subjects. The scientific program, thanks to the insights and efforts of the Program Committee as well as Dr. Peter Schiller, the President of the American Peptide Society, was extraordinarily rich, diverse, and exciting. It was comprised of 124 oral and 550 poster presentations. Three prominent format changes were installed. First, the Symposium started on Saturday instead of Sunday. Second, the program opened on Saturday afternoon with a Mini-symposium by the Young Investigators to give them an early start and attention. Finally, 40 short and definitive reports were given in two parallel sessions. The expanded format permitted an unprecedented number of lectures and enabled wider participation by the attending delegates.

New Polymeric Composite Materials Inamuddin, Polymeric and composite materials are in high demand and their continuing development is making our life style more comfortable. The present book reviews the latest research results in the field and explores the technological advantages of these materials in environmental, biomedical, actuator and fuel cell applications. Also discussed are applications of polymeric and composite materials in such areas as shape memory polymers, green composites for artificial organs, geomembranes for the safe disposal of waste, removal of heavy metals and dyes, adhesives, sensors and actuators, fuel cells, membrane and environmental sustainability, etc.

High-speed Rail: An Analysis Of The Chinese Innovation System Bai Gao,Guowu Li,Zhihong Zhen,2020-12-21 High-speed railway system is interdisciplinary subject that covers infrastructure, mobile equipment, traction power supply, communication signal, operation and maintenance, and transportation organization. The purpose of this book is to give readers a basic understanding of the technology behind of China's high-speed rail network.In this book, the author mainly focusses on the innovations of products and processes, especially product innovation, which involves the selection of technology route, technology system and technology source. Therefore, the innovation in HST here refers to the selection of technology route, technology system and technology source, as well as, the new products developed and manufactured according to the selection. With the in-depth study, the author would like to provide outlook for development in this area in the next stage.

CALL for widening participation: short papers from EUROCALL 2020 Karen-Margrete Frederiksen,Sanne Larsen,Linda Bradley,Sylvie Thouèsny,2020-12-14 Despite the Covid-19 pandemic, the EUROCALL society succeeded in holding the 28th EUROCALL conference, EUROCALL2020, on 20-21 August as an online, two-day gathering. The transition process required to make this happen was demanding and insightful for everyone involved, and, in many ways, a logical consequence of the core content and purpose of EUROCALL. Who would be better suited to transform an onsite conference into an online event than EUROCALL? CALL for widening participation was this year's theme. We welcomed contributions from both theoretical and practical perspectives in relation to the many forms and contexts of CALL. We particularly welcomed longitudinal studies or studies that revisited earlier studies. The academic committee accepted 300 abstracts for paper presentations, symposia, workshops, and posters under this theme; 57 short papers are published in this volume. We hope you will enjoy reading this volume, the first one to reflect a one hundred percent online EUROCALL conference/Online Gathering.

Computer and Computing Technologies in Agriculture IV Daoliang Li,Yande Liu,Yingyi Chen,2011-02-11 This book constitutes Part III of the refereed four-volume post-conference proceedings of the 4th IFIP TC 12 International Conference on Computer and Computing Technologies in Agriculture, CCTA 2010, held in Nanchang, China, in October 2010. The 352 revised papers presented were carefully selected from numerous submissions. They cover a wide range of interesting theories and applications of information technology in agriculture, including simulation models and decision-support systems for agricultural production, agricultural product quality testing, traceability and e-commerce technology, the application of information and communication technology in agriculture, and universal information service technology and service systems development in rural areas.

Modern Chinese Religion I (2 vols.) ,2014-12-04 Defining religion as “value systems in practice”, Modern Chinese Religion is a multi-disciplinary work that shows the processes of rationalization and interiorization at work in the rituals, self-cultivation practices, thought, and iconography of Buddhism, Daoism, and Confucianism in the 10th-14th centuries.
