Exploring English Language Teaching Graham Hall, 2011-03-08 Winner of the BAAL Book Prize 2012 Routledge Introductions to Applied Linguistics is a series of introductory level textbooks covering the core topics in Applied Linguistics, primarily designed for those entering postgraduate studies and language professionals returning to academic study. The books take an innovative practice to theory approach, with a 'back-to-front' structure. This leads the reader from real-world problems and issues, through a discussion of intervention and how to engage with these concerns, before finally relating these practical issues to theoretical foundations. Additional features include tasks with commentaries, a glossary of key terms, and an annotated further reading section. Exploring English Language Teaching provides a single volume introduction to the field of ELT from an applied linguistics perspective. The book addresses four central themes within English language teaching: 'Classroom interaction and management'; 'Method, Postmethod and methodology'; 'Learners'; and the 'Institutional frameworks and social contexts' of ELT. For each, the book identifies key dilemmas and practices, examines how teachers and other language teaching professionals might intervene and deal with these concerns, and explores how such issues link to and inform applied linguistic theory. Exploring English Language Teaching is an indispensable textbook for language teachers, and for post-graduate/graduate students and advanced undergraduates studying in the areas of Applied Linguistics, Language Teacher Education, and ELT/TESOL.

Random Walks and Random Environments: Random environments Barry D. Hughes, 1995 This is the second volume of a two-volume work devoted to probability theory in physical chemistry, and engineering. Rather than dealing explicitly with the idea of an ongoing random walk, with each chaotic step taking place at fixed time intervals, this volume addresses random environments-- models in which the disorder is frozen in space. It begins with an introduction to the geometry of random environments, emphasizing Bernoulli percolation models. The scope of the investigation then widens as we ask how structural disorder affects the transport process. The final chapters confront the interplay of two different forms of randomness; spatial randomness frozen into the environment and temporal randomness associated with the choices for next steps made by a random walker. The book ends with a discussion of the ant in the labyrinth problems and an extensive bibliography that, along with the rest of the material, will be of value to researchers in physics, mathematics, and chemical engineering.
