Robot Rules Jacob Turner, 2018-10-29 This book explains why AI is unique, what legal and ethical problems it could cause, and how we can address them. It argues that AI is unlike any other previous technology, owing to its ability to take decisions independently and unpredictably. This

gives rise to three issues: responsibility--who is liable if AI causes harm; rights--the disputed moral and pragmatic grounds for granting AI legal personality; and the ethics surrounding the decision-making of AI. The book suggests that in order to address these questions we need to develop new institutions and regulations on a cross-industry and international level. Incorporating clear explanations of complex topics, Robot Rules will appeal to a multi-disciplinary audience, from those with an interest in law, politics and philosophy, to computer programming, engineering and neuroscience.

Sudan Energy Policy, Laws and Regulation Handbook - Strategic Information, Regulations, Opportunities IBP, Inc.,2018-05-10 2011 Updated Reprint. Updated Annually. Sudan Energy Policy, Laws and Regulation Handbook

Entity-Oriented Search Krisztian Balog,2018-10-02 This open access book covers all facets of entity-oriented search—where “search” can be interpreted in the broadest sense of information access—from a unified point of view, and provides a coherent and comprehensive overview of the state of the art. It represents the first synthesis of research in this broad and rapidly developing area. Selected topics are discussed in-depth, the goal being to establish fundamental techniques and methods as a basis for future research and development. Additional topics are treated at a survey level only, containing numerous pointers to the relevant literature. A roadmap for future research, based on open issues and challenges identified along the way, rounds out the book. The book is divided into three main parts, sandwiched between introductory and concluding chapters. The first two chapters introduce readers to the basic concepts, provide an overview of entity-oriented search tasks, and present the various types and sources of data that will be used throughout the book. Part I deals with the core task of entity ranking: given a textual query, possibly enriched with additional elements or structural hints, return a ranked list of entities. This core task is examined in a number of different variants, using both structured and unstructured data collections, and numerous query formulations. In turn, Part II is devoted to the role of entities in bridging unstructured and structured data. Part III explores how entities can enable search engines to understand the concepts, meaning, and intent behind the query that the user enters into the search box, and how they can provide rich and focused responses (as opposed to merely a list of documents)—a process known as semantic search. The final chapter concludes the book by discussing the limitations of current approaches, and suggesting directions for future research. Researchers and graduate students are the primary target audience of this book. A general background in information retrieval is sufficient to follow the material, including an understanding of basic probability and statistics concepts as well as a basic knowledge of machine learning concepts and supervised learning algorithms.

Understanding Search Engines Michael W. Berry, Murray Browne, 2005-01-01 The second edition of Understanding Search Engines: Mathematical Modeling and Text Retrieval follows the basic premise of the first edition by discussing many of the key design issues for building search engines and emphasizing the important role that applied mathematics can play in improving information retrieval. The authors discuss important data structures, algorithms, and software as well as user-centered issues such as interfaces, manual indexing, and document preparation. Readers will find that the second edition includes significant changes that bring the text up to date on current information retrieval methods. For example, the authors have added a completely new chapter on link-structure algorithms used in search engines such as Google, and the chapter on user interface has been rewritten to specifically focus on search engine usability. To reflect updates in the literature on information retrieval, the authors have added new recommendations for further reading and expanded the bibliography. In addition, the index has been updated and streamlined to make it more reader friendly.

Eliciting Care Bo Kyeong Seo, 2020-06-23 In 2001, Thailand introduced universal health care reforms that have become some of the most celebrated in the world, providing almost its entire population with health protection coverage. However, this remarkable implementation of health policy is not without its weaknesses. Drawing on two years of fieldwork at a district hospital in northern Thailand, Bo Kyeong Seo examines how people in marginal and dependent social positions negotiate the process of obtaining care. Using the broader concept of elicitation, Seo analyzes the social encounters and forces that shape caregivers. These dynamics challenge dichotomies of subjugation and resistance, consent and coercion, and

dependence and autonomy. The intimate and moving stories at the core of Eliciting Care from patients and providers draw attention to a broader, critically important phenomenon at the hospital level. Seo's poignant ethnography engages with feminist theory on the ethics of care, and in so doing, makes a significant contribution to emerging work in the field of health policy and politics.
