PreColumbian Textile Conference VII / Jornadas de Textiles PreColombinos VII Lena Bjerregaard, Ann Peters, 2017-11 From May 31st to June 4th, 2016, the 7th International European conference on pre-Columbian textiles was held in Copenhagen. This volume unites seven original articles on pre-Columbian textiles from Mexico, which compare information on 20th century finds first described by Alba Guadalupe Mastache with that from previously unpublished finds and recently discovered contexts. A unique chapter presents the technical analysis and replication of a pre-Columbian tunic recovered in a cave site in Arizona, at the northern margins of the Mesoamerican interaction sphere. Thirteen articles on archaeological textiles from the central Andes include analysis of both textile assemblages preserved in museum collections and those recovered during recent fieldwork in archaeological sites of the Andean desert coast. These include textile assemblages representing the Initial and Formative Periods, Paracas and Nasca contexts, the Middle Horizon, diverse late Intermediate Period assemblages and emblematic Inca garments.

Identities, Experience, and Change in Early Mexican Villages Catharina E. Santasilia, Guy David Hepp, Richard A. Diehl, 2022-05-03 New perspectives on an important era in Mesoamerican history This volume examines shifting social identities, lived experiences, and networks of interaction in Mexico during the Mesoamerican Formative period (2000 BCE–250 CE), an era that helped produce

some of the world's most renowned complex civilizations. The chapters offer significant data, innovative methodologies, and novel perspectives on Mexican archaeology. Using diverse and non-traditional theoretical approaches, contributors discuss interregional relationships and the exchange of ideas in contexts ranging from the Gulf Coast Olmec region to the site of Tlatilco in Central Mexico to the often-overlooked cultures of the far western states. Their essays explore identity formation, cosmological perspectives, the first hints of social complexity, the underpinnings of Formative period economies, and the sensorial implications of sociocultural change. *Identities, Experience, and Change in Early Mexican Villages* is one of the first volumes to address the entirety of this rich and complex era and region, offering a new and holistic view. Through a wealth of exciting interpretations from international senior and emerging scholars, this volume shows the strong influence of cultural exchange as well as the compelling individuality of local and regional contexts over two thousand years of history. Animal Diversity and Biogeography of the Cuatro Ciénegas Basin Fernando Álvarez,Margarita Ojeda,2019-05-09 This volume investigates the contemporary fauna that inhabit the Cuatro Ciénegas Basin. Divided into 15 chapters, it addresses and describes their diversity, taxonomic and biogeographic affinities, and ecological characteristics. The Cuatro Ciénegas Valley is a unique oasis in the south-central region of the State of Coahuila, part of the Sonoran Desert, in Mexico. Several clues, specially derived from the study of the microbiota, suggest a very ancient origin of the valley and its permanence through time. This condition had promoted a high level of endemism and led to unique interactions between the resident species.

Monitoring, Control and Effects of Air Pollution Andrzej Chmielewski,2011-08-23 The book addresses the subjects related to the selected aspects of pollutants emission, monitoring and their effects. The most of recent publications concentrated on the review of the pollutants emissions from industry, especially power sector. In this one emissions from opencast mining and transport are addressed as well. Beside of SO_x and NO_x emissions, small particles and other pollutants (e.g. VOC, ammonia) have adverse effect on environment and human being. The natural emissions (e.g. from volcanoes) has contribution to the pollutants concentration and atmospheric chemistry governs speciation of pollutants, as in the case of secondary acidification. The methods of ambient air pollution monitoring based on modern instrumentation allow the verification of dispersion models and balancing of mass emissions. The comfort of everyday human's activity is influenced by indoor and public transport vehicles interior air contamination, which is effected even by the professional appliances operation. The outdoor pollution leads to cultural heritage objects deterioration, the

mechanism are studied and the methods of rehabilitation developed. However to prevent emissions the new technologies are being developed, the new class of these technologies are plasma processes, which are briefly reviewed at the final part of the book.

Geotechnical Engineering in the XXI Century: Lessons learned and future challenges
N.P. López-Acosta, E. Martínez-Hernández, A.L. Espinosa-Santiago, 2019-11-26 The first Pan-American Conference on Soil Mechanics and Geotechnical Engineering (PCSMGE) was held in Mexico in 1959. Every 4 years since then, PCSMGE has brought together the geotechnical engineering community from all over the world to discuss the problems, solutions and future challenges facing this engineering sector. Sixty years after the first conference, the 2019 edition returns to Mexico. This

book, *Geotechnical Engineering in the XXI Century: Lessons learned and future challenges*, presents the proceedings of the XVI Pan-American Conference on Soil Mechanics and Geotechnical Engineering (XVI PCSMGE), held in Cancun, Mexico, from 17 – 20 November 2019. Of the 393 full papers submitted, 335 were accepted for publication after peer review. They are included here organized into 19 technical sessions, and cover a wide range of themes related to geotechnical engineering in the 21st century. Topics covered include: laboratory and in-situ testing; analytical and physical modeling in geotechnics; numerical modeling in geotechnics; unsaturated soils; soft soils; foundations and retaining structures; excavations and tunnels; offshore geotechnics; transportation in geotechnics; natural hazards; embankments and tailings dams; soils dynamics and earthquake engineering; ground improvement; sustainability and geo-environment; preservation of historic sites; forensics engineering; rock mechanics; education; and energy geotechnics. Providing a state-of-the-art overview of research into innovative and challenging applications in the field, the book will be of interest to all those working in soil mechanics and geotechnical engineering. In this proceedings, 58% of the contributions are in English, and 42% of the contributions are in Spanish or Portuguese.

Robo Sacer David S. Dalton, 2023-05-15 *Robo Sacer* engages the digital humanities, critical race theory, border studies, biopolitical theory, and necropolitical theory to interrogate how technology has been used to oppress people of Mexican descent—both within Mexico and in the United States—since the advent of the North American Free Trade Agreement (NAFTA) in 1994. As the book argues, robo-sacer identity emerges as transnational flows of bodies, capital, and technology become an institutionalized state of exception that relegates people from marginalized communities to the periphery. And yet the same technology can be utilized by the oppressed in the service of resistance. The texts studied here represent speculative stories about this technological empowerment. These

texts theorize different means of techno-resistance to key realities that have emerged within Mexican and Chicano/a/x communities under the rise and reign of neoliberalism. The first three chapters deal with dehumanization, the trafficking of death, and unbalanced access to technology. The final two chapters deal with the major forms of violence—femicide and drug-related violence—that have grown exponentially in Mexico with the rise of neoliberalism. These stories theorize the role of technology both in oppressing and in providing the subaltern with necessary tools for resistance. *Robo Sacer* builds on the previous studies of Sayak Valencia, Irmgard Emmelhainz, Guy Emerson, Achille Mbembe, and of course Giorgio Agamben, but it differentiates itself from them through its theorization on how technology—and particularly cyborg subjectivity—can amend the reigning biopolitical and necropolitical structures of power in potentially liberatory ways. *Robo Sacer* shows how the cyborg can denaturalize constructs of *zoē* by providing an outlet through which the oppressed can tell their stories, thus imbuing the oppressed with the power to combat imperialist forces.
