The Weight of Images Katariina Kyrölä, 2016-02-17 The Weight of Images explores the ways in which media images can train their viewers' bodies. Proposing a shift away from an understanding of spectatorship as being constituted by acts of the mind, this book favours a theorization of relations between bodies and images as visceral, affective engagements that shape our body image - with close attention to one particularly charged bodily characteristic in contemporary western culture: fat. The first mapping of the ways in which fat, gendered bodies are represented across a variety of media forms and genres, from reality television to Hollywood movies, from TV sitcoms to documentaries, from print magazine and news media to online pornography, The Weight of Images contends that media images of fat bodies are never only about fat; rather, they are about our relation to corporeal vulnerability overall. A ground-breaking volume, engaging with a rich variety of media and cultural texts, whilst examining the possibilities of critical auto-ethnography to unravel how body images take shape affectively between bodies and images, this book will appeal to scholars and students of sociology, media, cultural and gender studies, with interests in embodiment and affect.

The Ashgate Research Companion to Fan Cultures Linda Duits, Koos Zwaan, Stijn Reijnders, 2016-04-22 Fans constitute a very special kind of audience. They have been marginalized, ridiculed and stigmatized, yet at the same time they seem to represent the vanguard of new relationships with and within the media. 'Participatory culture' has become the new normative standard. Concepts derived from early fan studies, such as transmedial storytelling and co-creation, are now the standard fare of journalism and marketing text books alike. Indeed, usage of the word fan has become ubiquitous. The Ashgate Research Companion to Fan Cultures problematizes this exaltation of fans and offers a comprehensive examination of the current state of the field. Bringing together the latest international research, it explores the conceptualization of 'the fan' and the significance of relationships between fans and producers, with particular attention to the intersection between online spaces and offline places. The twenty-two chapters of this volume elucidate the key themes of the fan studies vernacular. As the contributing authors draw from recent empirical work around the globe, the book provides fresh insights and innovative angles on the latest developments within fan cultures, both online and offline. Because the volume is specifically set up as companion for researchers, the chapters include recommendations for the further study of fan cultures. As such, it represents an essential reference volume for researchers and scholars in the fields of cultural and media studies, communication, cultural geography and the sociology of culture.

Digital Terrestrial Television in Europe Allan Brown,Robert G.

Picard,2004-09-22 Digital technology for the production, transmission, and reception of television is expected to replace analogue transmission throughout the world. The timetable for this transition is uncertain and different projections have been made for virtually every country in the world. This book gives the exhaustive details of the issues of this changeover in Europe and elsewhere. The details are placed within the context of the massive changes, which the television industry has been subjected to over the past 25 years. The rollout of digital terrestrial television (DTTV) in Europe is a significant issue for every country included in this survey. It is of such importance because DTTV is the centerpiece of many governments' policies toward making Europe the world leader in new information and communication technologies. These same governments are all wrestling with the issues of how to use the technology in ways that create both commercial and non-commercial value. European perspectives on the social, cultural, and political nature of broadcasting vary significantly from those in other parts of the world and require that the introduction of DTTV should be handled differently to its introduction elsewhere. There are enormous technical, political, and economic aspects to be considered and these vary from country to country in Europe. The two editors bring a perspective to this study as media economists who come to the European scene from other parts of the world. The book covers DTTV in depth, and it also includes discussions of cable, satellite, broadband, and Internet technology for comparison.

Gender Equality and the Media Karen Ross,Claudia Padovani,2016-07-15 This edited collection draws on and expands the findings from a pan-European research project undertaken during 2012-13 which was funded by the European Institute for Gender Equality and aimed to explore three key issues in relation to gender and media: women's inclusion in decision-making positions within media industries; how women are represented in the media; and what policies and mechanisms are in place to support women's career development and promote gender equality. The research looked at 99 major media

organisations across the EU including public and private sector broadcasters (TV and radio) as well as a number of major newspaper groups. Researchers also monitored TV programmes (factual only but including entertainment genres) across one week and coded 1200 hours of TV. In addition to elaborating the results from 16 of the participating nations, the collection includes a set of context-setting essays and a summarizing conclusion as well as a reflection on the purpose and utility of gender indicators. It is the first major work to look across the European media landscape and explore both employment and representation, providing a unique glimpse into the contemporary media scene in relation to gender equality, including examples of good and less good practice.

Viral Superantigens Kyuhei Tomonari, 1997-05-30 Since the discovery of viral superantigens in 1991, immunologists have made a number of new discoveries. The discoveries, especially those relating to the interplay between the immune system and viruses producing superantigens, have had a great impact on immunology and virology, as it appears that some diseases are triggered or exacerbated by viral superantigens. *Viral Superantigens* presents a complete review of this new area of study. Edited by a leading researcher and authored by a distinguished team of contributors, this comprehensive analysis covers every aspect of viral superantigens and related subjects, including critical topics such as effects on the T cell repertoire and viral superantigen-mediated diseases. Immunologists and virologists, clinical practitioners, and graduate students will find this book an invaluable resource to encourage further advances in research.

Routledge Handbook of Political Advertising Christina Holtz-Bacha, Marion R. Just, 2017-02-24 This Handbook provides the most comprehensive overview of the role of electoral advertising on television and new forms of advertising in countries from all parts of the world currently available. Thematic chapters address advertising effects, negative ads, the perspective of practitioners and gender role. Country chapters summarize research on issues including political and electoral systems; history of ads; the content of ads; reception and effects of ads; regulation of political advertising on television and the Internet; financing political advertising; and prospects for the future. The Handbook confirms that candidates spend the major part of their campaign budget on television advertising. The US enjoys a special situation with almost no restrictions on electoral advertising whereas other countries have regulation for the time, amount and sometimes even the content of electoral advertising or they do not allow television advertising at all. The role that television advertising plays in elections is dependent on the political, the electoral and the media context and can generally be regarded as a reflection of the political culture of a country. The Internet is relatively unregulated and is the channel of the future for political advertising in many countries

Social Media Discourse, (Dis)identifications and Diversities Sirpa Leppanen, Elina Westinen, Samu Kytola, 2016-12-08 This volume serves as an in-depth investigation of the diversity of means and practices that constitute

(dis)identification and identity construction in social media. Given the increasing prevalence of social media in everyday life and the subsequent growing diversity in the types of participants and forms of participation, the book makes the case for a rigorous analysis of social media discourses and digital literacy practices to demonstrate the range of semiotic resources used in online communication that form the foundation of (dis)identification processes. Divided into two major sections, delineating between the (dis)identification of the self across various social categories and the (dis)identification of the self in relation to the other, the book employs a discourse-ethnographic approach to highlight the value of this type of theoretical framework in providing nuanced descriptions of identity construction in social media and illuminating their larger, long-term societal and cultural implications. This volume is a key resource for researchers, and students in sociolinguistics, discourse studies, computer-mediated communication, and cultural studies.
