Chuck Yeager

**The Quest for Mach One** Chuck Yeager,1997 On October 14, 1947, flying the Bell X-1 rocket plane, Chuck Yeager burst through the mythical sound barrier at mach 1.0, to become the first man to fly faster than the speed of sound. Yeager's epic flight was the culmination of hours of work and flying time by a group of dedicated aviation pioneers, and it marked the beginning of flight testing as we know it. Who were these men? What were the aeronautical hurdles they cleared to usher in the space age and manned space flight? In the quest for Mach One, members of the Mach One team come together to chronicle the entire X-1 programme. They are Chuck Yeager, test pilot; Bob Cardenas, mother ship pilot; Bob Hoover, backup and chase pilot; and Jack Russell, Yeager's X-1 crew chief. Theirs is a saga of camaraderie, technical brilliance and heroism.

**1969 Ford Mustang Mach 1** Mike Mueller,2018 By the time the 1969 model year rolled around, it was well established that muscle cars were fast and plentiful. Every manufacturer had at least one corner of the showroom where the go fast guys could congregate and discuss the merits and time slips of the latest performance offerings. Competition being what it was, the manufacturers were looking for ways to entice potential buyers to choose their product over ever-increasing offerings from the competition. Some manufacturers tried to accomplish this with affordable prices, some tried fancy marketing schemes, and some created a look and a style that screamed performance even when standing still. The 1969 Mach I was Ford's attempt to create a package and a style to match the performance of its recently released and very potent 428-ci Cobra Jet engine package. Displacing the still-available but more conservative GT trim, the Mach I included unique and innovative graphics and mechanical innovations including shaker hood scoops, dual racing mirrors, deluxe interiors, competition suspension, dual chrome exhaust tips, and blacked-out hoods. The result was a wildly popular model that sold more than 70,000 units, compared to slightly more than 5,000 GT models for the year. Each volume in the In Detail Series provides an introduction and historical overview, an explanation of the design and concepts involved in creating the car, a look at marketing and promotion, an in-depth study of all hardware and available options, and an examination of where the car is on the market today. Also included are paint and option codes, VIN and build tag decoders, as well as production numbers.

**Mach One** Elsa Jade,2018-10-03 It's autumn in Big Sky Country, and crash-landed aliens are falling in love! Oversized Montana rancher Mach Halley's very big Stetson and giant belt buckle are hiding a secret of cosmic proportions: He's a survivor of a transgalactically prohibited private army of cyborg alien warriors built to kill. But with a long-dormant member of his unit about to be born, he needs a healer—even if it's a pretty little lady doc who must forget everything she sees. Making a name for herself in rural, large animal veterinary medicine has been tough for Doctor Chien Lun-mei, so she takes a strange midnight call to prove herself—only to discover a secret wilder than any bucking bronc. If she rants about UFOs and ETs, she'll be laughed out of the county, but this strong, silent cowboy who feels even more out of place than she does touches her in more ways than one. Together they'll fight to save an alien life, but for Mach to escape a war he never wanted, he'll have to risk an alien love. On the outskirts of the Big Sky Intergalactic Dating Agency, the Cyborg Cowboys of Carbon County are rounding up earthly pleasures for their forever mates. If you like: Firefly Star Wars Star Trek Battlestar Galactica, SFR sci-fi-rom sci-fi romance, cyborg rancher military heroes, veterinarian heroine, small town Montana alien romance, first love virgin hero sexy hot happily ever after!

**Mach One** Mike Lithgow,2015-11-06 Mike Lithgow joined the Fleet Air Arm in 1939. A year later he was flying from the deck of the ill-fated carrier Ark Royal. Lithgow flew in the attack which sank the Bismarck, and later was in the search for the Tirpitz. While on patrol in the South Atlantic his plane flew into the sea and he and his crew were left floating in their Mae Wests eight hundred miles from the nearest land...their rescue can only be described as miraculous. In 1945 Lithgow became a test pilot with Vickers Supermarine organisation; since 1948 he has been Chief Test Pilot. In his brilliant career with Vickers, Lithgow has flown the world demonstrating the prowess of that wonderful aircraft, the Swift, and its succeeding prototype, F525. His story is entertaining, intensely readable, and revealing of a very brave man.

Digital Circuit Boards Ralph Morrison,2012-04-30 A unique, practical approach to the design of high-speed digital circuit boards The demand for ever-faster digital circuit designs is beginning to render the circuit theory used by engineers ineffective. Digital Circuit Boards presents an alternative to the circuit theory approach, emphasizing energy flow rather than just signal interconnection to explain logic circuit behavior. The book shows how treating design in terms of transmission lines will ensure that the logic will function, addressing both storage and movement of electrical energy on these lines. It covers transmission lines in all forms to illustrate how trace geometry defines where the signals can travel, then goes on to examine transmission lines as energy sources, the true nature of decoupling, types of resonances, ground bounce, cross talk, and more. Providing designers with the tools they need to lay out digital circuit boards for fast logic and to get designs working the first time around, Digital Circuit Boards: Reviews in simple terms the basic physics necessary to understand fast logic design Debunks the idea that electrical conductors carry power and signals, showing that signal travels in the spaces, not the traces, of circuit boards Explains logic circuit behavior through real-time analysis involving the fields and waves that carry signal and energy Provides new information on how ground/power planes work Outlines a software program for solving energy flow in complex networks

The end results are two special feature cars that gained strong followings among the Ford Mustang faithful.

Mach 6 Will Mitchell,2012-03-03 Full Color Version Robert and Christie Mach are married spies who really know how to love - their kids, their friends and aviation. They especially know how to romance each other. Besides being CIA spies, both are top Air Force pilots. Mach 6 is their plum assignment after an extraordinary encounter told in the book, Complexity. Venerable CIA agent Oliver Baker, whose past exploits are still far above Top Secret, finds himself cleverly framed for murdering his best friend. If he goes to prison, he'd last a month, because his mortal enemies control prisons. Moreover several governments might fall. He escapes and fakes suicide, then reads he was acquitted after all. Oh well, dead for a while, he can operate more freely, protecting those he loves. Nearly everyone in Mach 6 is a spy, a counterspy or a saboteur. They are swirling around the most secret and desired research on earth, a Mach 6 aircraft that Robert and Christie are developing at Area-51. Most nations want the aircraft. Some would wage war to get it, or its plans. A shadowy conspiracy of twelve, with tentacles squeezing the highest levels of many governments covets the technology most of all. Competing agents are trying to create, protect, steal and destroy what will become a multi trillion dollar industry - the secret of Mach 6 flight. There is an unobtainable material wryly named Non-Existium because it is a stretchy aircraft skin that will withstand the white heat of Mach 6 air friction. It must be invented. Even if it can be made, how does one keep Mach 6 air from blowing out the flame in any jet engine that can also run both at takeoff and landing speeds? Then what about the four undiscovered speed barriers between Mach 1 and Mach 6, each potent enough to rip an ordinary plane to shreds. This book may give NASA ideas. For example, in the 21st century, who really needs an aircraft tail or windows? How do you prevent landing gear door hinges or aileron hinges from burning off? What kind of fuel will power the craft for 90 minutes, flying from San Francisco to Paris, Moscow, Beijing or Tokyo? And how do two top spies / pilots keep their loved ones secure, healthy and warm, while the world's most potent adversaries focus everything on destroying them? How, indeed, when those enemies might even have private nukes on US soil? It'll be interesting to find out how they can succeed, if they can succeed. If they do, in this third volume of the Mach Books series (1)Audaz, (2)Complexity, (3)Mach 6, (4)The Room bOmb. There will be many more. Well, that let the cat out of the bag! They do survive Mach 6 to reappear in The Room bOmb, already published. Do enjoy a tale as strong and twisty as a hawser, twisted of ropes, twisted of strings, twisted of threads, twisted of black widow spider webs. If you're a spy or have been one, or if you've experienced the kind of romance Ian and Vicki Utz know so well, if you've flown high-Mach aircraft at the edge of space, or if you have worked in secret at Area-51, if you've been at the boardroom levels of a team pioneering a whole industry from scratch, you'll find 'Mach 6' eerily familiar. If you have not, then 'Mach 6' is a first-person spree into those turbulent worlds, where at least Some things are as they seem. The trouble is that spies never seem to know which are which.

**Mach 1 Oxidation of Thoriated Nickel Chromium at 12040 C (22000 F)** Carl E. Lowell,1971 TD NiCr was exposed to a Mach 1, 1-atmosphere gas stream at 1204 C for times up to 50 hours. Weight change, metal thickness loss, X-ray diffraction, metallographic, and electron microprobe analyses were made. Neither surface preparation nor thermal cycling had an appreciable effect on the results. Initially, Cr2O3 formed and volatilized, allowing a rapid metal loss rate of 40 microns per hour. After about 1 hour the Cr2O3 broke down, resulting in an NiO overgrowth. The metal loss rate then slowed to 2.5 microns per hour and remained constant to 50 hours.

*The Pilot* Bill Hensley,Colleen Hensley,2011 Former US Air Force (USAF) and commercial aviation pilots turned entrepreneurs Bill and Colleen Hensley reveal the unique disciplines that allow pilots to excel under enormous stress. The Hensleys' lighthearted tone and dramatic narrative make this a quick, easy read, but one whose lessons linger. Their fictionalized but accurate tale about USAF pilots learning to fly the fiendishly fast supersonic T-38 jet reveals the roots of the Hensleys' method for personal success. The book has an endearing gee-whiz quality; it reads like a story in a Boy

Scout magazine. The whiz-bang tone offsets the book's shortfall: While the Hensleys adeptly describe the programs and practices pilots follow to achieve mastery, they never quite connect these practices to a world outside the military. Even so, getAbstract recommends their enjoyable flight-based narrative to anyone seeking a more purposeful, disciplined approach to work and life.
