Harnessing Farms and Forests in the Low-carbon Economy Zach Willey,2007 As the United States moves to a low-carbon economy in order to combat global warming, credits for reducing carbon dioxide emissions will increasingly become a commodity that is bought and sold on the open market. Farmers and other landowners can benefit from this new economy by conducting land management practices that help sequester carbon dioxide, creating credits they can sell to industry to offset industrial emissions of greenhouse gases. This guide is the first comprehensive technical publication providing direction to landowners for sequestering carbon and information for traders and others who will need to verify the sequestration. It will provide invaluable direction to farmers, foresters, land managers, consultants, brokers, investors, regulators, and others interested in creating consistent, credible greenhouse gas offsets as a tradable commodity in the United States. The guide contains a non-technical section detailing methodologies for scoping of the costs and benefits of a proposed project, quantifying offsets of various sorts under a range of situations and conditions, and verifying and registering the offsets. The technical section provides specific information for quantifying, verifying, and regulating offsets from agricultural and forestry practices. Time for Bed Wendy Rawlings,2019-08-21 Bed is where we sleep and dream, where we make love and give ourselves nightmares. The thirteen stories in Wendy Rawlings's Time for Bed traverse the complicated terrain of bedtime activity, from adulterous couplings to nightmares that come to life, in terms that can feel lurid, unsettling, or disturbingly funny. A college student struggles with her mother leaving her father for a "cafeteria lady" at her high school. A woman loses her only daughter in a mass school shooting and goes on a road trip to buy a custom coffin, then decides to take a side trip to NRA headquarters. A daughter decides she should be born again—literally. Social, cultural, and familial disruptions haunt these characters in their waking lives as they look to grab something or someone for stability. A collection of comic stories that confront difficult and tragic events, Time for Bed crafts dreamscapes and bizarre encounters into bedtime stories for adults.

Corn is Our Blood Alan R. Sandstrom,1991 Almost a million Nahua Indians, many of

them descendants of Mexico's ancient Aztecs, continue to speak their native language, grow corn, and practice religious traditions that trace back to pre-Hispanic days. This ethnographic sketch, written with a minimum of anthropological jargon and illustrated with color photographs, explores the effects of Hispanic domination on the people of Amatlan, a pseudonymous remote village of about six hundred conservative Nahuas in the tropical forests of northern Veracruz. Several key questions inspired anthropologist Alan R. Sandstrom to live among the Nahuas in the early 1970s and again in the 1980s. How have the Nahuas managed to survive as a group after nearly five hundred years of conquest and domination by Europeans? How are villages like Amatlan organized to resist intrusion, and what distortions in village life are caused by the marginal status of Mexican Indian communities? What concrete advantages does being a Nahua confer on citizens of such a community? Sandstrom describes how Nahua culture is a coherent system of meanings and at the same time a subtle and dynamic strategy for survival. In the 1980s, however, the villagers presented themselves as less Indian because increased urban wage imigration[sic] and profound changes in local economic conditions diminished the value of the Indian identity. Long-term participant-observation research has yielded new information about village-level Nahua society, culture change, magico-religious beliefs and practices, Protestantism among Mesoamerican Indians, and the role of ethnicity in maintaining and transforming traditional culture. Where possible, the villagers' own words are used in telling their history and culture.

Explore Software Defined Radio Wolfram Donat,2021-01-22 Do you want to be able to receive satellite images using nothing but your computer, an old TV antenna, and a $20

USB stick? Now you can. At last, the technology exists to turn your computer into a super radio receiver, capable of tuning in to FM, shortwave, amateur ham, and even satellite frequencies, around the world and above it. Listen to police, fire, and aircraft signals, both in the clear and encoded. And with the book's advanced antenna design, there's no limit to the signals you can receive. Combine your desktop or laptop computer with easy-to-find, Software Defined Radio (SDR) equipment, and tune in a wide range of signals in no time at all. Then, go one step further by converting a Raspberry Pi into your own dedicated SDR device. SDR USB dongles are usually designed to receive and decode high-definition digital television broadcasts, but the rising popularity of SDR has led to several of these devices being specifically made for - and marketed to - the software radio crowd. With step-by-step instructions, you'll have no problem getting everything up and running on both Windows and Linux. The antenna is the final piece in the SDR puzzle: Which antenna do you use? What shape do you need? How big does it have to be? And where do you point it? Get all the answers you need and learn what's possible when it comes to picking out or building an antenna. And if you're not particularly handy, don't worry. You can use an old-school set of rabbit ear antennas without too much modification. Discover the fun of this growing hobby and then open your ears to the hidden signals that surround you. What You Need: You will need a relatively recent computer or laptop, running either Windows or Ubuntu Linux. You can also use a Raspberry Pi. All of the software necessary is free and open-source, and the book describes in detail where to get it and how to install it, depending on your operating system.
