Performance Modeling of Communication Networks with Markov Chains Jeonghoon Mo, 2022-05-31 This book is an introduction to Markov chain modeling with applications to communication networks. It begins with a general introduction to performance modeling in Chapter 1 where we introduce different performance models. We then introduce basic ideas of Markov chain modeling: Markov property, discrete time Markov chain (DTMC) and continuous time Markov chain (CTMC). We also discuss how to find the steady state distributions from these Markov chains and how they can be used to compute the system performance metric. The solution methodologies include a balance equation technique, limiting probability technique, and the uniformization. We try to minimize the theoretical aspects of the Markov chain so that the book is easily accessible to readers without deep mathematical backgrounds. We then introduce how to develop a Markov chain model with simple applications: a forwarding system, a cellular system blocking, slotted ALOHA, Wi-Fi model, and multichannel based LAN model. The examples cover CTMC, DTMC, birth-death process and non birth-death process. We then introduce more difficult examples in Chapter 4, which are related to wireless LAN networks: the Bianchi model and Multi-Channel MAC model with fixed duration. These models are more advanced than those introduced in Chapter 3 because they require more advanced concepts such as renewal-reward theorem and the queueing

network model. We introduce these concepts in the appendix as needed so that readers can follow them without difficulty. We hope that this textbook will be helpful to students, researchers, and network practitioners who want to understand and use mathematical modeling techniques. Entropy Based Design and Analysis of Fluids Engineering Systems Greg F. Naterer, Jose A. Camberos, 2008-02-27 From engineering fluid mechanics to power systems, information coding theory and other fields, entropy is key to maximizing performance in engineering systems. It serves a vital role in achieving the upper limits of efficiency of industrial processes and quality of manufactured products. Entropy based design (EBD) can shed new light on various flow

Aircraft Design Mohammad H. Sadraey, 2012-11-28 A comprehensive approach to the air vehicle design process using the principles of systems engineering. Due to the high cost and the risks associated with development, complex aircraft systems have become a prime candidate for the adoption of systems engineering methodologies. This book presents the entire process of aircraft design based on a systems engineering approach from conceptual design phase, through to preliminary design phase and to detail design phase. Presenting in one volume the methodologies behind aircraft design, this book covers the components and the issues affected by design procedures. The basic topics that are essential to the process, such as aerodynamics, flight stability and control, aero-structure, and aircraft performance are reviewed in various chapters where required. Based on these fundamentals and design requirements, the author explains the design process in a holistic manner to emphasise the integration of the individual components into the overall design. Throughout

the book the various design options are considered and weighed against each other, to give readers a practical understanding of the process overall. Readers with knowledge of the fundamental concepts of aerodynamics, propulsion, aero-structure, and flight dynamics will find this book ideal to progress towards the next stage in their understanding of the topic. Furthermore, the broad variety of design techniques covered ensures that readers have the freedom and flexibility to satisfy the design requirements when approaching real-world projects. Key features:

- Provides full coverage of the design aspects of an air vehicle including: aeronautical concepts, design techniques and design flowcharts
- Features end of chapter problems to reinforce the learning process as well as fully solved design examples at component level
- Includes fundamental explanations for aeronautical engineering students and practicing engineers
- Features a solutions manual to sample questions on the book's companion website

When the Snowman Melts Vivian Home, 2000-01-27 Marcus Garvey Walker is smart, savvy, handsome, black and a partner in one of San Francisco's most prestigious law firms, Rheinhold, Marks and Walker. Marcus is married to Elizabeth, a successful and attractive TV news anchor. Their symphonious aligned life is suddenly interrupted when Marcus best friend Larry confides to him that he is HIV-positive. Larry drops the news like a nuclear warhead and doesn't explain it even when Marcus pushes him. This revelation by Larry causes Marcus to teeter. Although he loves Elizabeth, he hasn't exactly been the perfect husband. Almost...but...The but...is what causes everything to take on a new life of its own. He knows that he and Elizabeth must talk. He is reluctant since Larry's wife and Elizabeth are also friends. Then things get worse. Elizabeth's friend and co-worker discovers her husband has been shot and killed upon her return home. The murdered husband is a political giant in San Francisco's politics. The case is high profile. At first, detectives lean on the friend as a suspect until it is learned that she was at a barbecue given by Marcus and Elizabeth at the time of the murder. Macbeth Chen and Jorge Ramirez, two of SFPD's ace detectives are assigned to the case with marching orders to solve this case yesterday. Their investigation takes them to several false leads in the Castro district. All roads turn out to be dead ends. Then one day in court on a totally unrelated case, Chen spots a man in court wearing the same identical jade Buddha diamond encrusted pin that the murdered man had been wearing. He soon learns

the mans identity and is hot on his trail. When the man realizes this, he drives to a deserted industrial area not caring that Chen and Ramirez are following him. When they cautiously approach the car, they learn that the man has shot himself in the temple and is dead. The man turns out to be Larry, Marcus best friend. Now Marcus is hit squarely in the face with everything, he and Elizabeth finally talk. Elizabeth is devastated with what she learns. In a rage she leaves Marcus. Alone and in pain, Marcus tries to sought all that has happened. He is determined that he will win her back at all cost. Just when he is consumed with how he is going to win her back, a familiar key opens the lock.
