A Mobile Passive Radar System Markus Krückemeier, 2022-09-28

Airspace surveillance is one of the classic applications of radar technology. Existing systems are focused on large-scale surveillance of commercial airspace. This research presents a prototype of a small, mobile, passive radar system that for example can be used to monitor aircraft and UAVs in the airspace over maritime borders. The system is based on a coherent, software defined receiving system for data acquisition. The signal processing is subsequently performed in the digital domain. The paper gives an introduction to all the required fundamentals and all the relevant steps of signal processing are shown, starting from digital beamforming, through the generation of the range Doppler matrices, all the way to the tracking of targets using Kalman filters. Furthermore, a novel system for the detection of transmitter locations is presented, which allows the use of such a system in previously unknown scenarios. Finally, measurements are presented to show what such a system can achieve under real world conditions.

Fundamentals of Software Integration Kay Hammer, Tina

Timmerman, 2008 Integration is one of the most critical technical challenges in software today, as well as a difficult topic to generalize because of the many things affecting it — the technologies involved, the timeframe, the number and types of user communities requiring access, regulatory requirements, and so on. For this reason, Hammer and Timmerman have developed this comprehensive and unique overview of the evolution of software technology, with a particular emphasis on long-standing problems that remain unsolved. *Fundamentals of Software Integration* builds on this through background, presenting an abstract model of the software application

and its environment, along with a methodology for how to use this model to develop an integration strategy that meets both the short- and long-term needs of an organization. This text utilizes an accessible writing style and strategic exercises to help students recognize similarities in the integration challenges faced across technologies.

Purchase Order Management Best Practices Ehap H. Sabri, Arun P. Gupta, Michael A. Beitler, 2006-11-15 This ground-breaking text brings together advances in the field of purchase order management (POM) and offers a comprehensive framework for lowering costs, improving efficiency, eliminating non-value activities, and optimising the POM process.

Genetic Programming III John R. Koza, 1999 Genetic programming (GP) is a method for getting a computer to solve a problem by telling it what needs to be done instead of how to do it. Koza, Bennett, Andre, and Keane present genetically evolved solutions to dozens of problems of design, control, classification, system identification, and computational molecular biology. Among the solutions are 14 results competitive with human-produced results, including 10 rediscoveries of previously patented inventions.

Challenges of Information Technology Management in the 21st Century Information Resources Management Association. International Conference, 2000 As the 21st century begins, we are faced with opportunities and challenges of available technology as well as pressured to create strategic and tactical plans for future technology. Worldwide, IT professionals are sharing and trading concepts and ideas for effective IT management, and this co-operation is what leads to solid IT management practices. This volume is a

collection of papers that present IT management perspectives from professionals around the world. The papers seek to offer new ideas, refine old ones, and pose interesting scenarios to help the reader develop company-sensitive management strategies.

Cloud Infrastructures, Services, and IoT Systems for Smart Cities Antonella Longo, Marco Zappatore, Massimo Villari, Omer Rana, Dario Bruneo, Rajiv Ranjan, Maria Fazio, Philippe Massonet, 2017-10-25 This book constitutes the proceedings of the Second International Conference on Cloud, Networking for IoT Systems, CN4IoT 2017, and the Second EAI International Conference on ICT Infrastructures and Services for Smart Cities, IISSC 2017, held in Brindisi, Italy, in April 2017. The 26 full papers of both conferences were selected from 39 submissions. CN4IoT presents research activities on the uniform management and operation related to software defined infrastructures, in particular by analyzing limits or advantages in solutions for Cloud Networking and IoT. IISSC papers focus on ICT infrastructures (technologies, models, frameworks) and services in cities and smart communities.

Collaborative Planning, Forecasting, and Replenishment Dirk Seifert, 2003 Based on original research conducted at the Harvard Business School, Collaborative Planning, Forecasting, and Replenishment gathers the insights and experiences of 38 leading CPFR practitioners from around the world and from a variety of industries, including manufacturers, retailers, consulting companies, and IT-solutions providers. Introduction to e-Supply Chain Management David Frederick Ross,2016-04-19 In the quest to remove supply channel costs, streamline channel communications, and link customers to the value-added resources found along the supply chain continuum, Supply Chain Management (SCM) has emerged as a tactical operations tool. The first book to completely define the architecture of the merger of SCM and the Internet, *Introduction to e-Supply Chain Management: Engaging Technology to Build Market-Winning Business Partnerships* shows you how to exploit this merger and gain an unbeatable competitive advantage. The tightening of the economy and heavier restrictions and security measures placed on channel flows have rendered access to real-time, accurate supply chain information more critical than ever. Connectivity, messaging, and collaboration have become today's foremost buzzwords, as companies compete for survival in an environment where cycle times and permissible margins of error continue to shrink. *Introduction to e-Supply Chain Management* explores the concepts, techniques, and vocabulary of the convergence of SCM and the Internet so that companies can move beyond merely surviving and thrive in today's competitive marketplace.

The Search for Plan B Alan L. Sleeper,2016-08-15 Andy Gordon and Hank Harrison both retired in their mid-fifties - Andy, by choice, and Hank as the result of a corporate downsizing. They faced the dilemma of deciding what to do with the rest of their lives. After a chance meeting, Andy and Hank agreed to join forces and search for something significant to do with their abundant free time. They called it Plan B. After several false starts, they stumbled upon an idea that would change the future for thousands of people by slowing down aging, renewing vitality, and dramatically increasing mental prowess. To test the validity of their concept, they enticed their wives and friends to experiment with the program. The results were so dramatic they decided to start a company to bring their breakthrough to the world. Could the Super Train program also increase longevity? Only time would tell.

New Trends in Intelligent Software Methodologies, Tools and

Techniques H. Fujita,H. Perez-Meana,2021-09-28 The integration of AI with software is an essential enabler for science and the new economy, creating new markets and opportunities for a more reliable, flexible and robust society. Current software methodologies, tools and techniques often fall short of expectations, however, and much software remains insufficiently robust and reliable for a constantly changing and evolving market. This book presents 54 papers delivered at the 20th edition of the International Conference on New Trends in Intelligent Software Methodology Tools, and Techniques (SoMeT_21), held in Cancun, Mexico, from 21–23 September 2021. The aim of the conference was to capture the essence of a new state-of-the-art in software science and its supporting technology and to identify the challenges that such a technology will need to master, and this book explores the new trends and theories illuminating the direction of development in this field as it heads towards a transformation in the role of software and science integration in tomorrow’s global information society. The 54 revised papers were selected for publication by means of a rigorous review process involving 3 or 4 reviewers for each paper, followed by selection by the SoMeT_21 international reviewing committee. The book is divided into 9 chapters, classified by paper topic and relevance to the chapter theme. Covering topics ranging from research practices, techniques and methodologies to proposing and reporting on the solutions required by global business, the book offers an opportunity for the software science community to consider where they are today and where they are headed in the future.

Non-Destructive Testing J. Boogaard,G.M. van Dijk,2012-12-02
Non-Destructive Testing (NDT) is an activity closely related to the quality and reliability of products, and to the reliable and safe operation of industrial plants. Physical measuring techniques are used to examine parts of constructional assemblies for hidden imperfections and defects. A wide choice of measuring techniques is available to meet the demand of examining a wide variety of materials such as metals, plastics, rocks, as well as different structures and sizes ranging from semiconductor chips to nuclear reactors and off-shore oil platforms. Activities in the field of NDT encompass: Fundamental research to understand and describe the way in which reactions of certain imperfections to a physical measuring technique can be optimized and used to assess type and grade of imperfection; Methods to characterize materials and materials properties; Applications in product quality control; Applications in plant inspection to ensure a reliable operation of components, avoiding damage to both man and environment, as well as financial losses; Personnel education and qualification schemes; The spread of NDT applications to newly industrialized countries. The two proceedings volumes contain over 400 review and specialist papers. The most recent developments in the field of NDT are presented with contributions by outstanding experts from all over the world. Papers are grouped according to technique for those dealing with fundamental research and to field of application for the more practical oriented ones. In this way each

chapter provides an easy overview of related current research. Extensive keyword indexes have been included to facilitate the retrieval of information according to individual requirements. The high technical level of the papers and their up-to-date content will make them an indispensable source of information for students, researchers and professionals in the areas covered.
