Mangoes and Quince Carol Field,2008-12-05 Mangoes and Quince tells the story of Miranda, abandoned in Amsterdam by her husband, Anton, who disappeared into the South Seas. Marooned but restlessly inspired, Miranda expresses her passion through cooking. But as the restaurant she builds in Anton's ancestral home grows increasingly popular, her daughter, Diane, recedes into a world of longing for her lost father. Eventually Diana's curiosity will uncover his dangerous obsession. Mangoes and Quince is part mystery, part love story, part family drama-an intoxicating tale about a woman whose cooking seduces an entire city. Eleven luscious recipes accompany this unusual and sensuous debut.

I Have Tasted the Sweet Mangoes of Cebu George Estrada,2003 George Estrada's first book adds a whimsical new voice to the Asian American literature. I Have Tasted the Sweet Mangoes of Cebu takes readers on a star-crossed journey through the Philippines in search of his roots, the perfect love and the meaning of it all. His quest to win the heart of Liza, a beautiful, young woman he meets on the Internet, turns into a descent into delirium as Estrada tries to reconcile his Philippine passions and his Western mind. In the hilarious and sometimes painful flashback sequences, the author recounts his experiences as a journalist with The Oakland Tribune, a doctoral student at the University of Texas and a professor at Humboldt State University in Northern California. Now he needs to put all that intellectual training behind him and go native to win the woman of his dreams. The bittersweet ending will amaze and astound you.

**Mangoes on the Maple Tree** Uma Parameswaran,2006-07 What I found most enjoyable about this novel is that it steers clear of stereotypes about Indian immigrant families. The Bhaves and the Moghes are refreshingly different from some families that inhabit the world of diasporic fiction. There are no daughters being threatened with arranged marriages, no authoritarian parents, and no weepy sentimentality about the land left behind.-(Nalini Iyer, on SAWNET Book Pages) This is the story of two families that not only dive deep into dangerous waters, but surface and live to tell the tale.-(Michelle Reale in Rain Taxi Online) A hymn to the joys and sorrows of family, in the best, most inclusive sense of the word. *Mangroves* Sriyanie Miththapala,2008 Mangroves are among the most important ecosystems on the planet. They provide food and protection for a huge variety of marine and land-based species, sustain livelihoods of coastal populations, and provide protection from ocean swell and extreme weather events. Today, however, the world's mangroves are under threat from several sources including coastal development and the impacts of climate change. This document, the second in a series of booklets on coastal ecosystems, is aimed at the general public, as well as decision-makers and coastal developers. It provides an overview of the world's mangroves, a description of the threats to which they are subject and a summary of some of the actions being undertaken to protect them.

Mangroves and Halophytes Helmut Lieth,Maxímo García Sucre,Brigitte Herzog,2008-02-02 Focusing on Venezuela and Mexico, this edited volume from the International Society of Halophyte Utilisation (ISHU) explores the environmental issues facing South and Central America's coastal ecosystems, and discusses the uses of mangrove species and other halophytes in addressing issues of both coastal pollution and upland soil salinisation. The book presents a series of case studies and examines the economic potential of mangrove restoration and halophyte production.

*Mangroves for Building Resilience to Climate Change* R.N. Mandal,R. Bar,2018-12-07 This valuable book is a comprehensive volume on mangroves, with information accessible to both botany professionals and students. It provides an easy method of identifying mangroves and distinguishing one species from another. What is a mangrove and what are the criteria of mangroves are explained, along with descriptions of distinctions among major mangroves, mangrove associates, mangrove halophytes, and back mangals. Many photos and illustrations are provided, showing the visible features of mangroves. The volume also covers a range of other topics, including habitats and climatic conditions, morphological and reproductive features, how climate change is affecting mangroves and methods of mitigation and conservation. This book is about mangroves, the intertidal coastal forests that struggle every moment against hungry tides because mangroves flourish at the interface zone of land and sea. Like an evergreen forest in the tropical and subtropical regions of the world, mangroves form definite coastal vegetation, providing protection to people living in such fragile zones against the occurrence of frequent natural calamities. Key features: Introduces important facts about mangroves: definition, early records of mangroves, categorization, and more Looks at the distribution of mangroves worldwide along with features of mangrove habitats and climatic conditions Describes the ecology and environmental conditions, particularly the concept of intertidal zones along estuary positions where tidal flows inundate mangroves Discusses the distinct morphological attributes and reproductive phenology of major mangroves Details the attributes of mangroves, covering a total of 78 species of intertidal flora, including 32 true mangroves, along with their diagnostic features, salient attributes, and illustrations for easy identification Highlights the burning environmental issue of climate change and its impact on mangroves Provides a variety of methods of restoration, conservation, and protection of mangroves

**The Importance of Mangroves to People** United Nations Environment Programme (UNEP),2016-01-04 This publication provides a timely synthesis of the importance of mangroves to people. It highlights that in spite of the mounting evidence in support of the multitude of benefits derived from mangroves, they remain one of the most threatened ecosystems on the planet, being lost at a rate greater than coral reefs and tropical rain forests. This has potentially devastating effects to mangrove biodiversity and in turn, the food security, protection and livelihoods of some of the most marginalized coastal communities in developing countries, where more than 90 percent of the world's mangroves are found.

*World Atlas of Mangroves* Mark Spalding,2010-09-23 Published with ISME, ITTO and project partners FAO, UNESCO-MAB, UNEP-WCMC and UNU-INWEH This atlas provides the first truly global assessment of the state of the world's mangroves. Written by a leading expert on mangroves with support from the top international researchers and conservation organizations, this full colour atlas contains 60 full-page maps, hundreds of photographs and illustrations and a comprehensive country-by-country assessment of mangroves. Mangroves are considered both ecologically and from a human perspective. Initial chapters provide a global view, with information on distribution, biogeography, productivity and wider ecology, as well as on human uses, economic values, threats, and approaches for mangrove management. These themes are revisited throughout the regional chapters, where the maps provide a spatial context or starting point for further exploration. The book also presents a wealth of statistics on biodiversity, habitat area, loss and economic value which provide a unique record of mangroves against which future threats and changes can be evaluated. Case-studies, written by regional experts provide insights into regional mangrove issues, including primary and potential productivity, biodiversity, and information on present and traditional uses and values and sustainable management.

**Brazilian Mangroves and Salt Marshes** Yara Schaeffer-Novelli,Guilherme Moraes de Oliveira Abuchahla,Gilberto Cintrón-Molero,2023-02-25 This book offers a new ecosystemic approach to the understanding of mangrove and salt marsh ecosystems. Brazil has one of the largest areas of mangroves in the world, where salt marshes might or might not be associated. Different landscapes comprise the extensive coastline, where mangrove and salt marsh species' composition is discussed through the analysis of physiography, zonation, and succession processes. Both salt marsh and mangrove plants and the associated macroalgae will be characterized in their ecophysiological and phenological aspects, as well as genetic and epigenetic diversity. The chapters on microbial diversity and litterfall expose the well-known importance of these ecosystems as highly productive carbon sinks and pumps. The associated fauna of invertebrates (benthic meio and macrofaunas, especially brachyuran crabs) and vertebrates (fishes, birds, and mammals) are presented in a special

section. The conservational approach encompasses issues, such as historical ecology, economic valuation, protected areas, environmental education, climate changes, and adaptive management.

**The world's mangroves 2000-2020** Food and Agriculture Organization of the United Nations,2023-07-26 This report provides global and regional estimates of the area covered by mangrove forests, including area changes between 2000 and 2020. It analyses the drivers of these global, regional and subregional changes for the periods 2000-2010 and 2010-2020 with the aim of improving understanding of these drivers, their interactions and how their relative importance has shifted over time. In the study that underpins this report, FAO developed and validated an easy, repeatable methodology that integrates remote sensing with local knowledge. An FAO team and 48 image interpreters worldwide collected and analysed data on mangrove area in 2020, change in mangrove area between 2000 and 2020, and the drivers of change over the two decades. It is the first global study of mangrove area to provide information on land use rather than land cover.

**Mangroves: Biodiversity, Livelihoods and Conservation** Sudhir Chandra Das,Pullaiah,Elizabeth C. Ashton,2022-05-24 This contributory volume is a comprehensive collection on the mangrove forest eco-system and its ecology, the resources and potentials of mangroves, conservation efforts, mangrove eco-system services and threats to conservation. The book is an all-inclusive compilation on the status, conservation and future of mangroves. Mangroves are a unique ecosystem providing several ecosystem services. They are formed in the inter-tidal areas of large rivers and coastal islands. Mangroves thrives due to constant interaction with the terrestrial and marine ecosystem. These are the species dynamics, varying tidal amplitudes, plant succession, changing floral pattern of the channels of the estuary, the varying sediment transportation. There was 20% decline in mangrove forest area in the last 25 years due mainly to conversion and coastal development. Lengthy recovery periods required for the degraded mangrove forests. Hence there is an urgent need to take stock of the updated information on these mangroves at global level. It is of immense value to scientific community involved in teaching, research and extension activities related to mangrove conservation.
