Saving a World Treasure: Protecting Florence from Flooding Galloway, Gerald,Seminara, Giovanni,Blöschl, Günter,Garcia, Marcelo,Montanari, Alberto,Solari, Luca,2017-10-31 The Committee Firenze 2016, on the occasion of the 50th anniversary of the tragic 1966 flood, invited six engineers and scientists to form an International Technical Scientific Committee (ITSC) to assess the current status of flood protection for the city of Florence and identify steps to reduce the risk of flooding facing the city. In this final Report, ITSC concludes that Florence remains at risk to significant flooding and this risk grows each day. It is not a question of whether a flood of the magnitude of 1966 or greater will occur, but when. In fact, the level of protection that exists in Florence now is not on a level appropriate to the citizens and treasures that rest within the city. If, under current

conditions, a 1966-like flood occurred, the consequences to human lives, treasures, properties and community infrastructure could be much more catastrophic than they were in 1966.

Earthquake Microzoning Antoni Roca,Carlos Oliveira,2012-12-06 In many past and recent earthquakes it has been shown that the local conditions and, in particular, the local geology have a great influence on the observed seismic ground motion and, consequently, on the damage distribution in housing, industrial stock, and life-lines. Seismic microzoning is the usual procedure to have these local effects taken into account for engineering design and land-use planning, being a useful tool for earthquake risk mitigation. This

volume presents a collection of papers mainly originated from a workshop on Seismic Microzoning, organized during the 23rd General Assembly of the European Geophysical Society (EGS) in Nice, France in April 1998. The workshop dealt with various geophysical tools for analysing the effects of the local soils of subsurface geology on seismic ground motion, namely the methods using experimental data such as microtremors, and the theoretical/numerical 1-D and 2-D modelling methods. Additional contributions discussing techniques for characterising soil properties, microzoning applications to several urban areas, and others were added to the volume to broaden this important topic.

Rotating Thermal Flows in Natural and Industrial Processes Marcello Lappa,2012-07-25 Rotating Thermal Flows in Natural and Industrial Processes provides the reader with a systematic description of the different types of thermal convection and flow instabilities in rotating systems, as present in materials, crystal growth, thermal engineering, meteorology, oceanography, geophysics and astrophysics. It expressly shows how the isomorphism between small and large scale phenomena becomes beneficial to the definition and

ensuing development of an integrated comprehensive framework. This allows the reader to understand and assimilate the underlying, quintessential mechanisms without requiring familiarity with specific literature on the subject. Topics treated in the first part of the book include: Thermogravitational convection in rotating fluids (from laminar to turbulent states); Stably stratified and unstratified shear flows; Barotropic and baroclinic instabilities; Rossby waves and Centrifugally-driven convection; Potential Vorticity, Quasi-Geostrophic Theory and related theorems; The dynamics of interacting vortices, interacting waves and mixed (hybrid) vortex-wave states; Geostrophic Turbulence and planetary patterns. The second part is entirely devoted to phenomena of practical interest, i.e. subjects relevant to the realms of industry and technology, among them: Surface-tension-driven convection in rotating fluids; Differential-rotation-driven (forced) flows; Crystal Growth from the melt of oxide or semiconductor materials; Directional solidification; Rotating Machinery; Flow control by Rotating magnetic fields; Angular Vibrations and Rocking motions; Covering a truly prodigious range of scales, from atmospheric and oceanic processes and fluid motion in other solar-system bodies, to convection in its myriad manifestations in a variety of applications of technological relevance, this unifying text is an ideal reference for physicists and engineers, as well as an important resource for advanced students taking courses on the physics of fluids, fluid mechanics, thermal, mechanical and materials engineering, environmental phenomena,

meteorology and geophysics.

Gestão e Planejamento de Organizações Agroindustriais Jean Philippe Palma Révillion,Marcelo Silveira Badejo, Este livro aborda tópicos fundamentais relacionados ao planejamento estratégico e desenvolvimento das agroindústrias brasileiras. Na dimensão externa à organização, são tratadas temáticas emergentes relacionadas aos principais fenômenos balizadores das suas definições estratégicas: concorrência vertical entre o setor varejista e a agroindústria e, a crescente busca pelo alinhamento entre a oferta de produtos diferenciados e as demandas dos consumidores. Também é discutida a importância da consolidação de arranjos produtivos cooperativos para qualificar as agroindústrias de menor porte para esses desafios. De forma complementar, são apresentadas abordagens pertinentes à gestão

agroindustrial: implementação de estratégias de qualidade e diferenciação de produtos, administração financeira e gestão estratégica de custos, gestão da produção e logística. Esses conteúdos são desenvolvidos na disciplina Gestão e Planejamento de Organizações Agroindustriais (DERAD 19) oferecida no eixo temático “Organizações Agroindustriais” do Curso de Graduação Tecnológica Planejamento e Gestão para o Desenvolvimento Rural (PLAGEDER) da Universidade Federal do Rio Grande do Sul, na modalidade à distância.
