The Assassin's Destiny Megan Linski,Alicia Rades,Hidden Legends,2023-02-24 Love becomes unchained. Ava-Marie Nothing can scare you when you've already died. Caught between the realm of the living and the dead, I'm not the same person I used to be. I'm darker, crazier... and nothing's going to stop me from ruling over this prison. The merfolk key is linked to a legendary assassin, and Kallie might be the way to find it. If we're going to save the Elves, my friends and I will have to resort to unsavory methods. I'm getting justice for my past, and taking revenge no matter what the consequences. My prophecy will test just how far I'm willing to go. If I truly want to stop the end of the world, we'll have to go to the one place every inmate fears... Cellblock 9. Charlie The Warden nearly stole the love of my life away. I'm determined to protect what's mine with everything in me. He thinks he can lock me in this cage, but I'm prepared to show him just what a villain can do. Our demigod powers grow stronger by the day, and soon, nothing will be able to contain us... contain me. There's nothing I won't do to fulfill my destiny. One way or another, we're escaping the Institute, and raining hell down on whoever stands in our way. *** The Villain's Club descends into Cellblock 9 in the fourth installment of the Prison For Supernatural Offenders series. Dark romance and evil schemes ignite at a magical penitentiary full of vampires, shifters, witches, angels, and mermaids, where the Warden wages war and the inmates fight back. This series takes place in the Hidden Legends Universe, along with the Academy of Magical Creatures series, University of Sorcery series and the College of Witchcraft series. Each series stands on its own and can be read in any order. This is a full-length novel over 700 pages. Recommended reading age 18+ Become the villain and order today!

Flow Diversion of Cerebral Aneurysms Min S. Park,Phil Taussky,Felipe C. Albuquerque,Cameron G. McDougall,2017-10-24 Seminal resource on state-of-the-art flow diversion techniques from leading neurointerventional experts From detachable balloons and GDC coils to the recent advent of flow diversion, practitioners of endovascular neurosurgery have been fortunate to work in an era of rapid and exciting advances. The first commercially available flow diverter in the U.S. was approved specifically for a small subset of cerebral aneurysms. Recent experience has demonstrated its utility in treating challenging or otherwise untreatable aneurysms, safely and efficaciously. The design of these devices requires learning radically different methods than those used in the deployment of other, non-braided stents. Flow Diversion of Cerebral Aneurysms by Min Park, Philipp Taussky, Felipe Albuquerque, and Cameron McDougall provides step-by-step guidance on utilization of flow diversion technology in clinical practice. Reflecting the combined experience and knowledge of pioneers in neurointerventional surgery, this comprehensive book fills a gap in available resources. Twenty-one chapters cover fundamentals to advanced concepts - historical perspective to future developments. Key Features More than 100 high quality graphics and illustrative case studies reinforce key concepts Techniques and nuances of Pipeline, Silk (Balt Extrusion), Surpass Streamline, and Flow-Redirection Endoluminal Device (FRED) deployment An overview of current flow diversion devices, discussion of coil embolization versus flow diversion, off-label uses, adjuvant approaches, and hemodynamic modifications Pharmacology, flow diversion grading scales, and post-procedure radiographic imaging Clinical pearls on ruptured aneurysms, intraprocedural/postprocedural complications, and management of aneurysm residuals The ultimate goal of incorporating cutting-edge flow diversion techniques into the aneurysm treatment paradigm is improved efficacy and patient outcome. The knowledge gleaned from this outstanding resource will help residents and fellows learn to deploy flow diverters for the first time and enable seasoned clinicians to expand their neurointerventional radiology skills.

Selected Episodes Relating to the Life of Vladimir Daniilovich Myukis, Deceased Daniel Marcus,2012-09-26 This is a satirical/historical novel of the life of a fictional Soviet era artist, Vladimir Daniilovich Myukis who was orphaned during the Second World War. By the early 1950s, Myukis now in a street gang of war orphans was arrested by the police for vandalism. The vandalism consisted of drawing large pictures of elephants on the bombed out buildings in hisw native city of Novogrudok in what is now Belarus. The arresting officers realized that Myukis had real art ability so they sent him to art school. From there he was recruited into the KGB where he forged signatures for their agents. He also created art for the Promotional Division of Art Department of GAZ Volga, a huge auto factory that assembled Volga automobiles in the city of Gorkii, now renamed Nizhni Novgorod. Several years later, Myukis was kicked out of Art Department of the Promotional Division and sent to the secret KGB facility located within the factory where he did pretty much the same thing as before but now for the Minister of Propaganda. From there he was let go when that secret KGB facility closed. Myukis, referred to as Volodya in the book, (the nickname for Vladimir), then found

employment in the Leningrad GUM department store and remained there until his retirement. Shortly thereafter, the Soviet Union collapsed as did the Russian pension system. The loss of his pension resulted in Myukis immigrating to the United States where he eventually found work as the counter man at a delicatessen on the Coney Island boardwalk. In this book, Myukis encounters various characters both in the USSR and the USA. His closest confidant in the US was a former KGB translator named Arcady S. Nyekrassov (Archie) who also worked in Gorkii. There are other numerous characters who were people he encountered in the USSR and later in the United States. The format of the narrative is non-linear. The novel opens with Myukis living in Brooklyn, New York and then goes back in time to his early days within the GAZ Volga/KGB. From there the narrative progresses back to the day after the opening chapter. The satire in the book is of various artists and institutions within the USSR and the US. The book has about 25 illustrations in it. I did all the art work except for the reproduction of Joshua Reynolds self portrait, a 1920s Soviet era political poster, and an illustration done by my wife, Cathy A. Morris. There is also some Russian in Cyrillic script which I have translated, often in a foot note.

Number Fields Daniel A. Marcus,2018-07-05 Requiring no more than a basic knowledge of abstract algebra, this text presents the mathematics of number fields in a straightforward, pedestrian manner. It therefore avoids local methods and presents proofs in a way that highlights the important parts of the arguments. Readers are assumed to be able to fill in the details, which in many places are left as exercises.

Cohesion and Structure of Surfaces K. Binder,M. Bowker,J.E. Inglesfield,P.J. Rous,1995-12-18 During the past fifteen years there has been a dramatic increase in the number of different surfaces whose structures have been determined experimentally. For example, whereas in 1979 there were only 25 recorded adsorption structures, to date there are more than 250. This volume is therefore a timely review of the state-of-the-art in this dynamic field. Chapter one contains a compilation of the structural data base on surfaces within a series of tables that allows direct comparison of structural parameters for related systems. Experimental structural trends amongst both clean surfaces and adsorbate systems are highlighted and discussed. The next chapter outlines the successes of local density functional theory in predicting the relaxations and reconstructions of clean metal and semiconductor surfaces, and the behaviour of adsorbates such as hydrogen, oxygen and alkali elements on metal surfaces, thereby explaining some of the experimental trends observed within the database. These ab initio density functional calculations are of ground state properties at the absolute zero of temperature. Chapter three provides an introduction to finite temperature effects in a pedagogical review of current statistical mechanical treatments of phase transitions at surfaces, many of which display the prominent role of fluctuations or non-mean field behaviour. The final chapter discusses the relationship of the reactivity of a surface to its morphology and composition, which is particularly relevant to a fundamental understanding of catalysis.
