**Preliminary Investigation of Stability of a Fin-stiffened Slender Strut** Mark S. Lake,K. Chauncey Wu,1988 A fin-stiffened strut concept which possesses high bending stiffness and low packaged volume has been identified for use on large space structures. The concept incorporates three curved fins which deploy from a core tube to increase the effective cross-sectional moment of inertia, the buckling load, and the vibration frequency of the strut. A strut design incorporating welded fin connections provides an upper bound of the strut buckling load. A strut design which allows the individual fins and core to move independently in the strut axial direction provides a lower bound of the strut buckling load which is approximately 20 to 25 percent of the upper bound. A practical strut design, incorporating hinge assemblies which constrain the fins to move together but independently of the core tube in the strut axial direction, provides a buckling load which is 75 to 80 percent of the upper bound. Euler's equation can be used to accurately predict buckling loads for the bounding designs. Flat plate finite element models of all designs give results that agree to within 10 percent of the experimental values. Equivalent beam models of the strut give results which are slightly less accurate.

**Between Noble and Humble** Ruchang Zhou,2009 Between Noble and Humble: Cao Xueqin and the Dream of the Red Chamber (红楼梦, literally New Biography of Cao Xueqin) is a translation of a scholarly work by the famous mainland Chinese critic Zhou Ruchang. Written for the Western reader, it historicizes the life and times of the Chinese novelist Cao Xueqin (c. 1715-1763) and comprehensively introduces the origins of the novel Dream of the Red Chamber (Honglou meng). This translation is unique because it offers the first book-length biography of Cao Xueqin in English. Zhou carefully historicizes the decline of the once illustrious Cao clan, and he demonstrates how Cao Xueqin's own childhood experiences in a wealthy bondservant family during the Qing dynasty profoundly informed the encyclopedic narrative that he would later write. In Between Noble and Humble, Zhou also offers intriguing and controversial theories about Honglou meng based on decades of careful research, for instance, that the famous commentator Red Inkstone was in fact a female relative of Cao Xueqin.

Impact of Aviation on Climate ,2016 Under the Federal Aviation Administration's (FAA) Aviation Climate Change Research Initiative (ACCRI), non-CO2 climatic impacts of commercial aviation are assessed for current (2006) and for future (2050) baseline and mitigation scenarios. The effects of the non-CO2 aircraft emissions are examined using a number of advanced climate and atmospheric chemistry transport models. Radiative forcing (RF) estimates for individual forcing effects are provided as a range for comparison against those published in the literature. Preliminary results for selected RF components for 2050 scenarios indicate that a 2% increase in fuel efficiency and a decrease in NOx emissions due to advanced aircraft technologies and operational procedures, as well as the introduction of renewable alternative fuels, will significantly decrease future aviation climate impacts. In particular, the use of renewable fuels will further decrease RF associated with sulfate aerosol and black carbon. While this focused ACCRI program effort has yielded significant new knowledge, fundamental uncertainties remain in our understanding of aviation climate impacts. These include several chemical and physical processes associated with NOx-O3-CH4 interactions and the formation of aviation-produced contrails and the effects of aviation soot aerosols on cirrus clouds as well as on deriving a measure of change in temperature from RF for aviation non-CO2 climate impacts -- an important metric that informs decision-making.

**Complementary Bonding Analysis** Simon Grabowsky,2021-04-06 As chemical bonds are not observable, there are various theories and models for their description. This book presents a selection of conceptually very different and historically competing views on chemical bonding analysis from quantum chemistry and quantum crystallography. It not only explains the principles and theories behind the methods, but also provides practical examples of how to derive bonding descriptors with modern software and of how to interpret them.
