Dictionary of Medical Vocabulary in English, 1375-1550 Juhani Norri,2016-06-10 Medical texts written in English during the late Middle Ages have in recent years attracted increasing attention among scholars. From approximately 1375 onwards, the use of English began to gain a firmer foothold in medical manuscripts, which in previous centuries had been written mainly in Latin or French. Scholars of Middle English, and editors of medical texts from late medieval England, are thus faced with a huge medical vocabulary which no single volume has yet attempted to define. This dictionary is therefore an essential reference tool. The material analysed in the Dictionary of

Medical Vocabulary in English, 1375-1550 includes edited texts, manuscripts and early printed books, and represents three main types of medical writing: surgical manuals and tracts; academic treatises by university-trained physicians, and remedybooks. The dictionary covers four lexical fields: names of sicknesses, body parts, instruments, and medicinal preparations. Entries are structured as follows: (1) headword (2) scribal variants occurring in the texts (3) etymology (4) definition(s), each definition followed by relevant quotations (5) references to corresponding entries in the Dictionary of Old English, Middle English Dictionary, and The Oxford English Dictionary (6) references to academic books and articles containing information on the history and/or meaning of the term.

Biomedical English Isabel Verdaguer, Natalia Judith Laso, Danica Salazar, 2013-06-15 The corpus-based studies in this volume explore biomedical research writing in English from a variety of perspectives. The articles in this collection delve into the lexicographic issues involved in building an electronic database of collocations and lexical bundles, offer insight on the teaching and learning of prototypical multiword units of meaning in biomedical discourse, and view written scientific English through the lens of such diverse fields as phraseology, metaphor, gender and discourse analysis. The research presented in this book forms the theoretical and methodological foundation of SciE-Lex, a lexical database of collocations and prefabricated expressions designed to help scientists write scientific papers in English accurately. The concluding chapter on FrameNet addresses frame

semantics, whose application to the cross-linguistic study of scientific language will open new and promising avenues of research in the study of specialized languages.
