**Mechatronics and Machine Vision in Practice** John Billingsley, Robin Bradbeer, 2007-12-15 From grading and preparing harvested vegetables to the tactile probing of a patient's innermost recesses, mechatronics has become part of our way of life. This cutting-edge volume features the 30 best papers of the 13th International Conference on Mechatronics and Machine Vision in Practice. Although there is no shortage of theoretical and technical detail in these chapters, they have a common theme in that they describe work that has been applied in practice.

**Advances in Planar Lipid Bilayers and Liposomes** , 2013-05-11 Advances in Planar Lipid Bilayers and Liposomes volumes cover a broad range of topics, including main arrangements of the reconstituted system, namely planar lipid bilayers as well as spherical liposomes. The invited authors present the latest results of their own research groups in this exciting multidisciplinary field. **Search for  $t\bar{t}H$  Production in the  $H \rightarrow b\bar{b}$  Decay Channel** Marcel

Rieger, 2021-02-25 In 1964, a mechanism explaining the origin of particle masses was proposed by Robert Brout, François Englert, and Peter W. Higgs. 48 years later, in 2012, the so-called Higgs boson was discovered in proton-proton collisions recorded by experiments at the LHC. Since then, its ability to interact with quarks remained experimentally unconfirmed. This book presents a search for Higgs bosons produced in association with top quarks  $t\bar{t}H$  in data recorded with the CMS detector in 2016. It focuses on Higgs boson decays into bottom quarks  $H \rightarrow b\bar{b}$  and top quark pair decays involving at least one lepton. In this analysis, a multiclass classification approach using deep learning techniques was applied for the first time. In light of the dominant background contribution from  $t\bar{t}$  production, the developed method proved to achieve superior sensitivity with respect to existing techniques. In combination with searches in different decay channels, the presented work contributed to the first observations of  $t\bar{t}H$  production and  $H \rightarrow b\bar{b}$  decays.

**Languages and Compilers for Parallel Computing** Chen Ding, John Criswell, Peng

Wu, 2017-01-20 This book constitutes the thoroughly refereed post-conference

proceedings of the 29th International Workshop on Languages and Compilers for Parallel Computing, LCPC 2016, held in Rochester, NY, USA, in September 2016. The 20 revised full papers presented together with 4 short papers were carefully reviewed. The papers are organized in topical sections on large scale parallelism, resilience and persistence, compiler analysis and optimization, dynamic computation and languages, GPUs and private memory, and run-time and performance analysis.

**Biomedical Visualisation** Eiman Abdel Meguid, Priti L. Mishall, Haley L. Nation, Paul M. Rea, 2023-04-05 This book highlights the integration of science and imaging and demonstrates how we can teach and learn in a much more accessible, innovative, and engaging way using technology. This volume is particularly focused on three main themes: advanced microscopy, anatomy education, and radiology visualisation related to patient care. The chapters pertaining to advanced microscopy convey complex biomedical information by visual means. These chapters provide both an overview on the principles of microscopy and specific applications of microscopy that have led to groundbreaking discoveries. Chapters pertaining to education summarise the recent trends in teaching gross and microscopic anatomy and emphasise the creation and use of novel tools to support student learning. Lastly, the radiological visualisation segment dives into the history of radiographic imaging and highlights the profound effect technology has had on improving patient outcomes. This volume will be of particular interest to many; the

scope of this book encompasses medicine, dentistry, allied health professions, biomedical sciences, anatomy and histology education, radiology, and microscopy. Students, researchers, educators, and clinicians will learn something new, be stimulated to ask innovative questions, and be inspired to continue the technological advancements pushing science forward.
