China's Leading Mobile Media Services Company ,

Mobile Media Jo Groebel, Eli M. Noam, Valerie Feldmann, 2006-08-15 The proliferation of mobile media in recent years is an international phenomenon, with billions of devices sold annually. Mobile communications are now moving beyond individualized voice to mass media content--text, voice, sound, images, and even video. This will create new types of content that allow media companies and users to interact in new ways. There is a strong interest from the media and telecom industries in what manner of applications and content can be distributed in that fashion, and at what cost. To answer these questions, the book provides 18 chapters from internationally renowned authors. They identify likely types of content such as news, entertainment, peer-to-peer, and location-specific information; evaluate the economics, business models, and payment mechanisms necessary to support these media; and cover policy dimensions such as copyright, competitiveness, and access rights for content providers. This volume takes the reader through the various elements that need to be considered in the development of third generation (3G) content, and explains pitfalls and barriers. The result is a volume of interest to business professionals, academics, and policy makers. The book is international in focus and a glossary of terms is provided. There are few publications available which give an overview of this rapidly changing field.

Leveraging Mobile Media Valerie Feldmann, 2005-02-24 Mobile communications emerges as a new digital distribution platform for media content due to the migration to next generations' networks and their capabilities for broadband data communications. As such, mobile communications offers opportunities for media development because of an increased overlap between interpersonal and group communications with mass media communications, ubiquitous access to trusted media brands as well as integrated cross-network strategies for media content. The book takes two different viewpoints on potential levers for the developments of the media industry and mobile media: from a competitive strategy point of view it assesses the potentials for an extension of cross-media strategies; from a public policy point of view the book investigates demands and requirements for innovation policy that foster innovation in mobile media markets. Mobile Communications Nicola Green, Leslie Haddon, 2009-12-15 The cellphone has achieved a global presence faster than any other form of information and communication technology. A global multi-billion dollar industry, this small, mundane device is now an intrinsic part of our everyday life. This communications medium has had an immense social and cultural impact and continues to evolve. Talking, texting, photographing, videoing, connecting to a network of other media - the cellphone now seems essential. But, beyond the ways in which it has actively restructured our daily lives, the cellphone has changed our sense of ourselves and the way we see the world. The relationship between public and private space, how we view time and space, how we rely on and negotiate social networks - all are increasingly centred on this small piece of technology. Mobile Communications presents a succinct, challenging, and accessible overview of the transformations and challenges presented by this most personal, yet most overlooked, technology.
