Cities Ian Douglas,2013-05-30 Cities are amongst our greatest creations. Yet at the start of the twenty-first century there is increasing concern over their unchecked expansion and the detrimental effect this is having on the planet, as induced climate change and ever increasing demands upon the world's resources take effect. How can we make the world's cities more sustainable? Ian Douglas tells the story of cities - why they exist, how they have evolved, the problems they have encountered and those they will face as our century progresses. Global in geographical coverage, and ranging from the cities of the classical world to the megacities of today, it is the first comprehensive environmental history of cities.

Spying Software Development in Google Android Fissha SeyoumTeshome,2017-06-28 Bachelor Thesis from the year 2011 in the subject Computer Science - IT-Security, Helsinki Metropolia University of Applied Sciences , language: English, abstract: The main purpose was to study the

concept behind developing spying software. The goal of this project was to develop a mobile phone tracking application for Google Android phones. The application was expected to include the use of GPS and Cell-ID to track the location of a mobile phone. The Google Android SDK was used to develop the tracking software application. The application was tested on a Google Android mobile phone. The result showed that the development process of location and maps-based applications was fast while using Google Android. This was because of two main reasons. First, Google Android Provided APIs for location-based services such as GPS and Cell-ID. Second, having Eclipse with ADT plug-in as the choice to develop the application led to an easy means of debugging and testing. The tracking application was found important to use since it will allow users to trace lost phones or to locate lost people. The application can be developed further by adding a number of features to it such as running in the background, SMS copying and making a spy call.

Social Media Observatory Alexei Sisulu Abrahams,2024-03-26 Learn how to build a panoramic observatory app for monitoring and collecting datasets from major social-media platforms and online communities—no prior programming experience required! Whether you're a security researcher, a journalist, an activist, or a scholar, this book is an essential blueprint for building your window into online worlds. Analyzing the billions of social media posts published daily online provides essential data for modern researchers—and this book gives you the tools to build a panoramic view of the digital-community discourse out there waiting to be discovered. Social Media Observatory is an in-depth beginner's guide to coding web applications that monitor commentary on the major platforms in real time, giving you unparalleled insights into the cultural and political conversations of our time, then empowering you to reach your own conclusions. You'll first set up a working observatory for public channels on the instant messaging app Telegram, then incorporate Instagram and Twitter with help from the Wayback Machine. You'll detect Twitter bots via account birth charts, extract text-embedded URLs for analysis, plot interactive Telegram networks to enumerate media bubbles, and map the structure of a social movement on Instagram. Finally, you'll deploy your observatory to a remote server to collaborate with other investigators. By the end of the book, you'll have a working website that allows team members to log in, request data collection, and perform analysis of collected data, via an intuitive and user-friendly interface. Along the way, you'll learn to: Use Python libraries to retrieve Telegram data from a remote API Analyze the data you've retrieved with PostgreSQL, RabbitMQ, and other tools Store data in a relational database Create and securely deploy an interactive dashboard for data collection and analysis in the cloud Modify your observatory's functionality to suit your needs Whether you're a security researcher, a journalist, an activist, or a scholar, Social Media Observatory is an essential blueprint for building your window into online worlds.

MHealth World Health Organization,2011 The use of mobile and wireless technologies to support the achievement of health objectives (mHealth) has the potential to transform the face of health service delivery across the globe. A powerful combination of factors is driving this change. These include rapid advances in mobile technologies and applications, a rise in new opportunities for the integration of mobile health into existing eHealth services, and the continued growth in coverage of mobile cellular networks. According to the International Telecommunication Union (ITU), there are now over 5 billion wireless subscribers; over 70% of them reside in low- and middle-income countries. For the first time the World Health Organization's Global Observatory for eHealth (GOe) has sought to determine the status of mHealth in Member States; its 2009 global survey contained a section specifically devoted to mHealth. Completed by 114 Member States, the survey documented for analysis four aspects of mHealth: adoption of initiatives, types of initiatives, status of evaluation, and barriers to implementation. Fourteen categories of mHealth services were surveyed: health call centres, emergency toll-free telephone services, managing emergencies and disasters, mobile telemedicine, appointment reminders, community mobilization and health promotion, treatment compliance, mobile patient records, information access, patient monitoring, health surveys and data collection, surveillance, health awareness raising, and decision support systems.

Cyber Environment and International Politics Hasret Çomak, Burak Şakir Şeker, Yaprak Civelek, Çağla Arslan Bozkuş, 2022-11-27 Actors in the cyber sphere include countries' armed forces, intelligence organizations, legal authorities, and natural and legal persons. Cyber War is defined as the intrusion by one state to destroy or disrupt the computer systems or networks of another state. It is defined as "the sort of warfare in which computer systems are employed to damage or destroy adversary systems" in the United Nations Glossary, in the same way as information warfare. Cyber warfare moves at a breakneck speed. It's a global phenomenon that occurs before the traditional battleground. In order to counter cyber crimes and related issues, more studies needed to improve our understanding, inform policies and develop and strengthen cooperation between individuals, institutions and countries. All states need to take constitutional, legal, technical and administrative measures on cybersecurity. For this purpose, "national virtual environment security policies" should be developed and constantly updated. National information security should be given utmost importance. A cyber security awareness culture should be established and supported by regional and global international institutions and organizations. A common understanding on cyber security needs to be adopted at all levels. CONTENTS PREFACE PART 1.
