Mongolia Update - Coverage of 1998 Political Changes David South, UNDP Mongolia Communications Coordinator,1998-01-15 1998 proved a tumultuous year for Mongolia. The country's existing economic crisis caused by the transition from Communism to free markets was made worse by the wider Asian Crisis. The government was destabilized, leading to an often-confusing revolving door of political figures. In order to help readers better understand the political changes in the country, a special edition of Mongolia Update was published that year.

Technopolis Deog-Seong Oh,Fred Phillips,2013-12-13 Six years of UNESCO-World Technopolis Association workshops, held at various world cities and attended by government officials and scholars from nearly all the world's countries, have resulted in a uniquely complete collection of reports on science park and science city projects in most of those countries. These reports, of which a selected few form chapters in this book, allow readers to compare knowledge-based development strategies, practices, and successes across countries. The chapters illustrate varying levels of cooperation across government, industry, and academic sectors in the respective projects – and the reasons and philosophies underlying this variation - and resulting differences in practices and results.

Demand in the Desert Asian Development Bank,2014-08-01 Mongolia's mining-based economic development and the sustainability of its urban economies depend on both water and energy. The examination of the water energy nexus in two river basins in Mongolia shows that water availability is the binding constraint as energy facilities, mining operations, agriculture, and urban water users compete for scarce water resources. Development of new technologies for efficient water and energy use, introduction of renewable energy options, and water demand management through economic instruments are recommended. However, achieving greater water security requires integration of water resource considerations into energy and mining development decision making, while strengthening the capacity of newly formed river basin organizations.

Mongolia's Economic Prospects Matthias Helble,Hal Hill,Declan Magee,2020-06-01 This publication examines Mongolia's recent economic development and outlines reforms that would help the country take advantage of its many opportunities. Mongolia is rich in natural resources and, although landlocked, is well-placed to boost trade with its two giant neighbors. The country needs to diversify its economy beyond mining, enhance economic stability, and increase employment. To maximize Mongolia's potential the government can improve macroeconomic management, enhance the skill base, and provide hard and soft infrastructure to promote trade and efficient logistics. Governance and institutional reforms are also crucial. The government will need to continue to drive reforms so that they are well implemented and deliver the intended change.

E-procurement United Nations. Economic and Social Commission for Asia and the Pacific, 2006 An ICT-enabled procurement system and government adoption of e-commerce can transform business processes between the suppliers in the private sector and the Government. E-procurement promotes greater accountability of the Government, increases efficiency and cost-effectiveness and enables equal access to the public sector market. Developing countries can use e-procurement as a tool to achieve better governance and enhance economic development. The International Conference on E-procurement assisted the participants to gain a better understanding of e-procurement and e-government, and build capacity for the planning and implementing of an e-procurement system. The workshop was intended to assist the participants in defining priorities and specific actions for progressing to e-procurement. Some of the topics addressed at this conference included: re-engineering internal processes of government/public administration, factors critical to the successful implementation of e-procurement including e-training of government officials; stakeholder participation in e-government projects; building community and government leadership; and security and privacy issues in e-procurement. Participants were required to submit a proposal for implementing e-procurement in their countries, which could potentially be executed.

Special attention is paid to the substantial role of mining in the Mongolian economy. We find that a Blanchard and Quah-type joint model of output and inflation provides a more robust estimate of the output gap for Mongolia than the traditional statistical decompositions.

This publication provides essential information for national and local administrators, engineers, field practitioners, and policy makers to plan, implement, and manage improved WASH in schools, particularly in small and isolated rural settlements. It covers WASH standards and norms, design and technology options, operation and maintenance, hygiene education approaches, and cost estimation.
